

# **Young Moldova: Problems, Values and Aspirations**

**Research into the opinions of young people in the  
Republic of Moldova 2016-17**

**Chişinău, December 2016**

This National Youth Survey of the Republic of Moldova was commissioned by the Development Centre of the Organisation for Economic Co-operation and Development (OECD) to support the Ministry of Youth and Sports of the Republic of Moldova. The Republic of Moldova one of the participating countries in the Youth Inclusion Project implemented by the OECD Development Centre and co-financed by the European Union. The survey and its report as conducted by the Center of Sociological Investigations and Marketing "CBS-AXA".

## Executive summary

Highlights of the national Youth in Moldova 2016 survey show new findings and tendencies in the areas of 1) democracy and civic participation; 2) migration; 3) employment; 4) education; and 5) health.

### 1. Democracy and civic participation

**The Republic of Moldova experiences serious challenges in the engagement and satisfaction of its youth (age 15-29) with the political life of the country.**

- Youth with a low education level and low socio-economic status report being disengaged from politics; only 20.0% report engagement. More highly educated and well-off youth report greater engagement at 33.3%.
- The majority (60.0%) of young people report dissatisfaction with how democracy is functioning.

**Lack of voter participation and perception of political marginalisation by young people bear out these perceptions.**

- About 20.0% of youth report never having voted in national or local elections since having reached the voting age of 18.
- The majority (66.7%) of voting and non-voting respondents believe the youth vote influences governance little or not at all.

**Youth engagement with politics happens mainly via the Internet and TV.** The Internet is the main source of information about the country's political affairs for 80.0% of youth.

**Youth report care a lot about issues in civil society.** Most notably, 50.0% report caring about economic issues, such as poverty, wages and lack of jobs, while 50.0% report a high level of concern over corruption.

**Youth report benefiting from services provided by youth centres.** However, 75.0% remain unaware of their existence. Youth who do participate in centre services and opportunities do so mostly for volunteering (50.0%), information (50.0%) and life skills training (33.3%).

**Less than 50.0% of Moldovan youth report being satisfied with their lives.** The socio-economic situation in Moldova has had an impact on young people. Moreover, life dissatisfaction increases with age. About 75.0% of youth aged 14-18 are satisfied with their lives, falling to 33.3% for those aged 25-29.

### 2. Migration

**About 33.3% of Moldovan youth have at least one family member, relative or friend working abroad.** A further 33.3% have themselves either gone abroad for work in the past two years or intended to go abroad in the next six months. About 80.0% mentioned improving their standard of living as a reason for going, while 40.0% cited higher chances of finding work. Migration is a prevalent theme for Moldovan youth, affecting their lives in many ways.

### 3. Employment

**Less than 50.0% of employed young people work where they live.** This confirms the prevalence of internal migration for employment purposes. Youth from rural areas are more likely to travel for work, mostly to a city in another rayon. Most youth work in the hospitality industry and service sector.

**Many youth face being exploited by their employers.**

- As many as 33.3% of youth work without a work contract. Where a contract is provided, 25.0% of the contracts exclude terms regarding work length, and 10.0% exclude terms regarding annual leave.
- For 75.0% of youth, unsatisfying wage is the primary reason for looking for another job. Other reasons include unsatisfying work environment (25.0%) and stressful work conditions (25.0%).

**About 50.0% of young people believe they have little access to work.** The phenomenon is more pronounced in rural areas. 40.0% also express interest in finding a job in Moldova. The most selected constraints to find decent work are low wage (33.3% response rate), poor working conditions (25.0% response rate) and skills mismatch (25.0% response rate). Consequently, 25.0% of respondents consider starting their own businesses in the next two years.

#### 4. Education

**Over 33.3% of respondents are enrolled in education institutions.** Regarding their opinions on education, women are slightly more enthusiastic about their studies than men (46% vs. 42%), whereas those from rural areas are substantially more enthusiastic about education than those from urban areas (49% vs. 38%).

**There is a pronounced gender difference in approaches to education.** Fully 33.3% of young women devote three or more hours per day to study outside of classroom vs. 12.8% for young men. It is not surprising, then, that 60.0% of young women aspire to continue their studies to obtain a good degree in the future vs. 40.0% of young men. More than 33.3% of young people report that constraints in access affect their ability to pursue education.

#### 5. Health

**Few young people know about Youth Friendly Health Centers (YFHCs), which contrasts with the expansion and demonstrated effectiveness of such centres.** While 20.0% of young women and 12.5% of young men know about YFHCs, 16.7% of those who are aware report having benefited from their services.

**About 33.3% of sexually active youth report always using contraception.** Still, 25.0% report never using contraception, and 5.0% report not knowing what contraceptive methods are.

## 1. Introduction

In 2014, the Government of Republic of Moldova adopted the National Strategy for Youth Sector Development 2020 and an Action Plan for its implementation. Their purpose is to develop and consolidate the youth sector over six years, contributing to the creation of an adequate environment that ensures the evolution of each young individual both professionally and personally, including youth from groups with reduced opportunities.

The Ministry of Youth and Sports of Moldova (Ministerul Tineretului și Sportului [MTS]) has primary responsibility for the effective implementation of the strategy objectives. In the process of elaborating the action plan and the monitoring and evaluation framework, MTS and its partners found that there are no data sources that would allow an adequate evaluation of the youth situation in several areas, making it impossible to measure the strategy's impact on those areas in the future.

An important aspect to implement the strategy is partner involvement. The expertise and experience of the development partners in attracting different funds and external financing can greatly contribute to reaching the strategy goals.

The MTS became a partner in the framework of the EU-OECD Youth Inclusion project, implemented by the Organisation for Economic Co-operation and Development (OECD) and co-financed by the European Union (EU) (2014-2017). The project aims to analyse policies for youth in ten developing and emerging economies. The project adopts a multi-sectorial approach to support countries in better responding to the aspirations of young people and strengthening youth involvement in national development processes. The project will shed light on what determines youth vulnerabilities and successful transitions into adulthood. It will also strengthen national capacities to design evidence-based policies that promote youth inclusion and youth well-being.

In this context, the OECD in partnership with MTS launched a study about Moldovan youth aged 14-29. The main purpose was to initiate and monitor their mood, intentions and attitudes towards different subjects that are important for the implementation of the strategies elaborated by the Government.

The research focused on the following key aspects with regard to youth:

- involvement in the decision-making process;
- level of civic activism;
- political participation and the right to vote of Moldovan youth as of 16 years old;
- role of physical mobility in increasing competitiveness in the job market;
- participation in national and international internships;
- access to and perception of health services;
- family and reproductive health;

- access to quality education, especially among socially vulnerable youth;
- level of satisfaction with the educational system and the skills gained through it;
- level of trust in the associative sector and the status of youth within this sector;
- youth migration and causes;
- social relations;
- perceptions of welfare.

## 1.1. Methodology

### QUANTITATIVE SURVEY

**Sample:** Standard probabilistic, multi-stage and representative of the population aged 14-29 of the Republic of Moldova (RM).

**Population of survey:** Population aged 14-29.

**Sample size:** 1 112 interviews.

**Stratification criteria:** 12 geographic regions corresponding to the territorial-administrative units before they became rayons; residence environment (urban or rural); size of urban localities (two types); population size in rural localities (three types).

**Sampling:** Volumes of urban layer, total in the regions (former districts) and rural layer were calculated in proportion to the population size according to data communicated by the National Bureau of Statistics of the Republic of Moldova.

#### Randomising stages:

1. Locality from the frame of the adjusted layers: Selected localities (92) were established in a random way based on a table with random numbers.
2. Family: The maximum number of interviews carried out in a sampling locality was five. Participating families were selected via random route method, with a pre-determined statistical step.
3. Respondent: In families with several adult individuals, the interviewee was determined via the method of the closest birthday.

**Representativeness:** Sampling is representative of the population of 14-29-year-olds in the Republic of Moldova with a maximum error of +3.0%.

**Period of data collection:** 11-23 June 2016. The interviews were carried out at the respondents' home. The questionnaire was drafted in Romanian (official) and Russian (minority) languages, offering respondents the possibility of choosing the most optimal language for them.

### QUALITATIVE SURVEY

Qualitative research consisted of five discussion groups (Table 1.1). The categories of interviewee were established in co-operation with the MTS and donors. Interviews contributed to explaining some findings of opinion polls and to highlighted specific concerns of certain categories at the same time.

**Table 1.1. Qualitative research design**

|      | Categories of persons interviewed                          | Number of participants |
|------|--|------------------------|
| 1 FG | Young people with disabilities (aged 16-29)                | 6                      |
| 2 FG | Young women from rural areas (aged 14-19)                  | 10                     |
| 3 FG | Young people from vulnerable/poor families (aged 18-29)    | 7                      |
| 4 FG | Ethic minority young people, Russian speakers (aged 16-29) | 10                     |
| 5 FG | Roma young people (aged 14-19)                             | 7                      |
|      | <b>Total number of persons interviewed</b>                 | <b>40</b>              |

Group discussions were conducted in June 2016. All group discussions were held in Chişinău, with the exception of the Roma young people group discussion, which was held in Soroca with the participation of respondents from the whole country, respecting territorial distribution (Centre, North and South). Theoretical sampling was used for selecting respondents by residence environment, gender, education and family status in order to ensure the representativeness of the groups.

## 1.2. Socio-demographic characteristics of respondents

The target subjects were young people from all regions of the country, ATUG, Chişinău municipality and Bălţi. A total of 1 112 persons aged 14-29 were interviewed, among whom 47.1% were young men and 52.9% were young women. Data analysis of qualitative research is presented in terms of several socio-demographic characteristics to ensure the statistical representativeness of certain groups (Table 1.2).

**Age group (3):** 14-18; 19-24; 25-29.

**Education level (3):**

- Low: No education, unfinished primary school (up to grade 4), primary school (grade 4), incomplete secondary school (grade 9).
- Average: General secondary school (grades 11 to 12), vocational school.
- High: College (two to five years of study), higher education.

**Occupation (4):** Employed; unemployed; student; housewife.

**Socio-economic status (3):** low; average; high.

**Table 1.2. Distribution of respondents by socio-demographic characteristics**

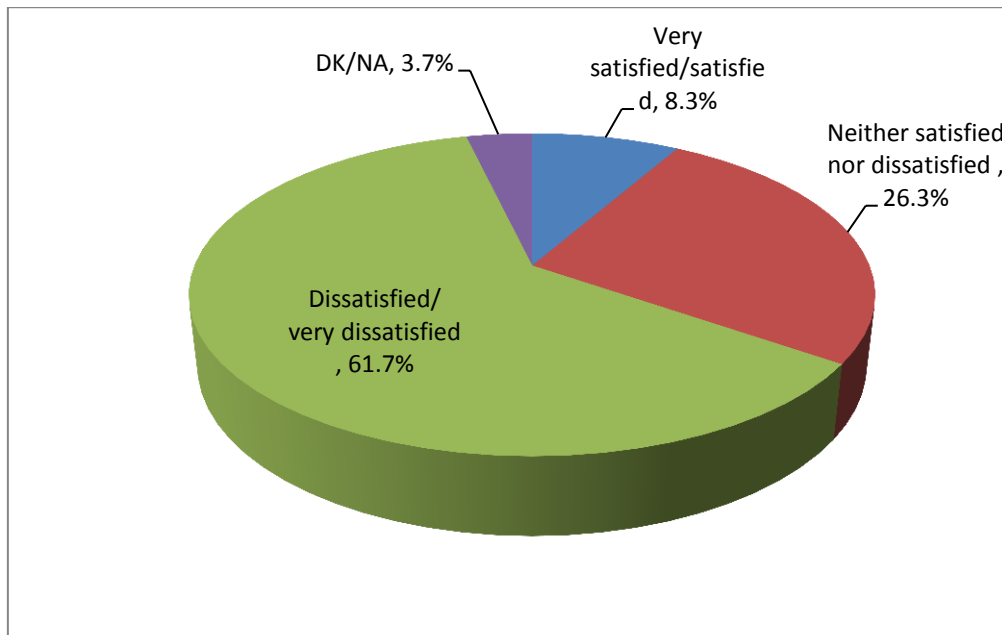

| Socio-demographic characteristics |        | Number of respondents | Share of total respondents |
|-----------------------------------|--------|-----------------------|----------------------------|
| Age group                         | 14-18  | 449                   | 23.6%                      |
|                                   | 19-24  | 335                   | 39.3%                      |
|                                   | 25-29  | 328                   | 37.1%                      |
| Gender                            | Male   | 533                   | 47.1%                      |
|                                   | Female | 579                   | 52.9%                      |

| <b>Socio-demographic characteristics</b>      |                              | <b>Number of respondents</b> | <b>Share of total respondents</b> |
|---|------------------------------|------------------------------|-----------------------------------|
| <b>Education level</b>                        | Low                          | 553                          | 41.9%                             |
|   | Average                      | 380                          | 37.7%                             |
|   | High                         | 179                          | 20.3%                             |
| <b>Marital status</b>                         | Married/domestic partnership | 423                          | 46.8%                             |
|   | Unmarried                    | 689                          | 53.2%                             |
| <b>Language of communication</b>              | Moldavian/Romanian           | 840                          | 75.9%                             |
|   | Russian                      | 272                          | 24.1%                             |
| <b>Enrolled in an educational institution</b> | Yes                          | 535                          | 37.0%                             |
|   | No                           | 577                          | 63.0%                             |
| <b>Occupation</b>                             | Employed                     | 250                          | 27.8%                             |
|   | Unemployed                   | 318                          | 33.8%                             |
|   | Student                      | 488                          | 32.2%                             |
|   | Housewife                    | 56                           | 6.2%                              |
| <b>Socio-economic status</b>                  | Low                          | 356                          | 32.5%                             |
|   | Average                      | 243                          | 22.3%                             |
|   | High                         | 513                          | 45.2%                             |
| <b>Residence environment</b>                  | Urban                        | 463                          | 42.5%                             |
|   | Rural                        | 649                          | 57.5%                             |

## 2. Democracy and civic participation

According to young people participating in this research, democracy is a challenge in the Republic of Moldova (RM). Only 8.3% of those interviewed report satisfaction with democracy in the country, while 61.7% are dissatisfied/very dissatisfied (Figure 2.1). Those dissatisfied have a higher education level and are employed – they represent approximately 66.0% of the persons interviewed in those groups. Only 10.0% of respondents show the highest level of satisfaction: those aged 14-18, those unmarried and those enrolled in an educational institution (Table 193 in Annex).

**Figure 2.1. How satisfied are you with the way democracy works in the RM?**

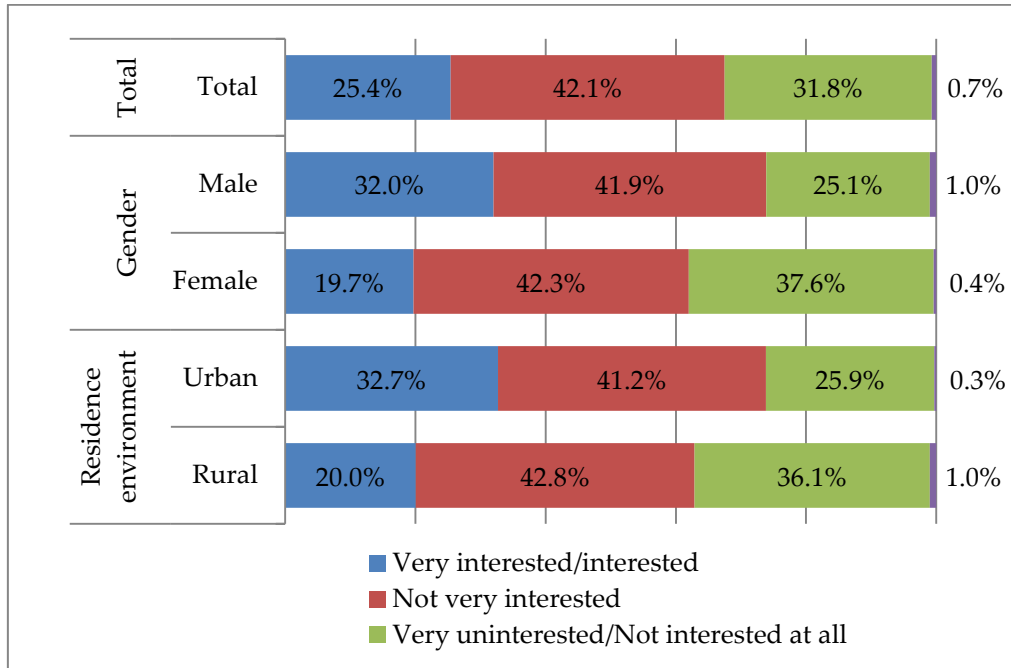

*Note:* In all figures and tables, DK/NA = Do not know/Not applicable.

### 2.1. Political interest

Interest in politics is extremely low among young Moldovans. Only 25.0% of respondents say they are very interested/interested in politics. More young men than women show an interest in politics (32.0% vs. 19.7%). Urban youth show marginally more interest than rural youth (32.7% vs. 20.0%) (Figure 2.2).

**Figure 2.2. How interested are you in politics? (By gender and residence environment)**

Interest in politics depends on both socio-economic status and education level. Roughly twice as many respondents with high socio-economic status and education levels (vs. low levels for both characteristics) report being very interested in politics (Figure 2.3 and Table 182 in Annex).

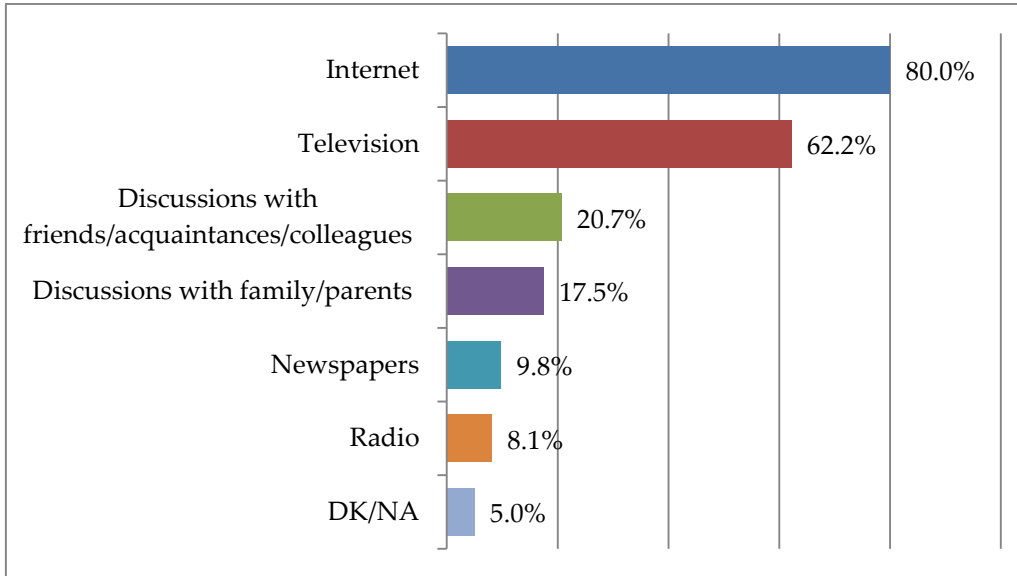

**Figure 2.3. How interested are you in politics? (By socio-economic status and education level)**

Regarding their sources of information about the political life of the country, 80.0% select the Internet, 62.2% select TV, and about 20.0% select their close social circle (friends/acquaintances/colleagues or family/parents) (Figure 2.4). The Internet is the main source of information for approximately 97.7% of young people with a high education level and 93.9% of housewives. TV

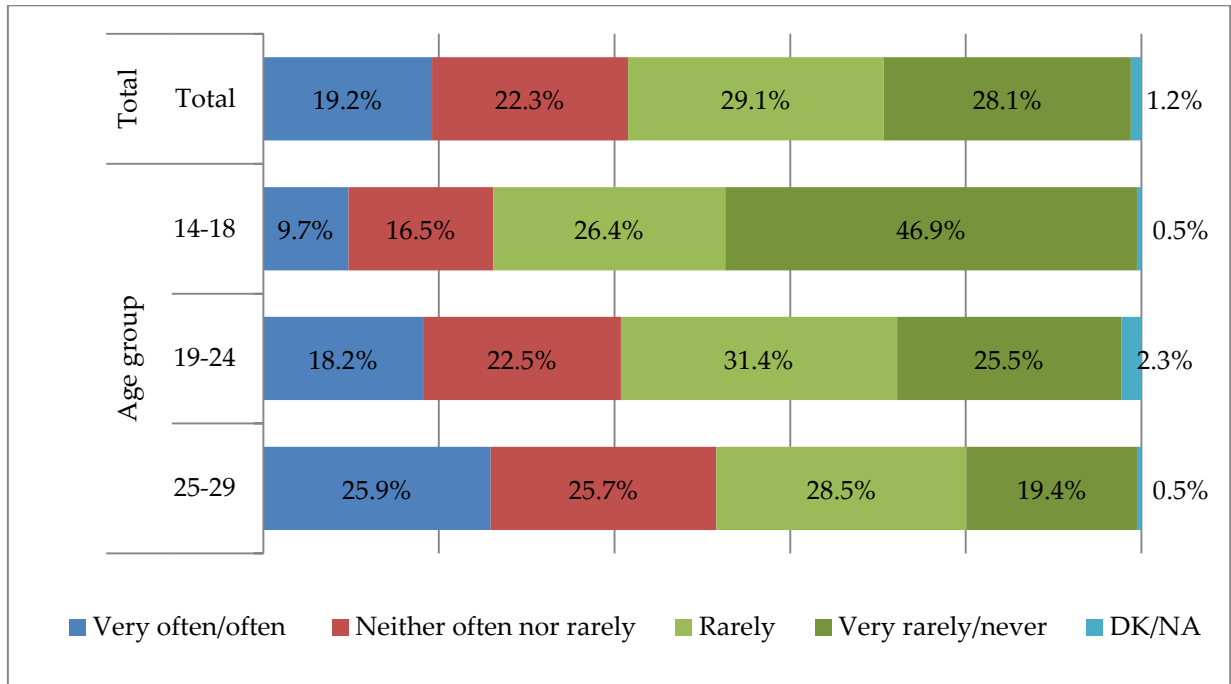

is the main source of information for young people aged 25-29 (approximately 69.0%) and for those with a high education level (approximately 69.0%). In addition, 26.0% of respondents mention discussions with friends, acquaintances and colleagues; 23.5% of respondents enrolled in educational institutions mention discussions with family/parents; 23.1% of housewives cite radio; and 17.4% of respondents with a high education level refer to newspapers (Figure 2.4 and Table 187 in Annex).

**Figure 2.4. What is your main source of information about politics in the RM?**

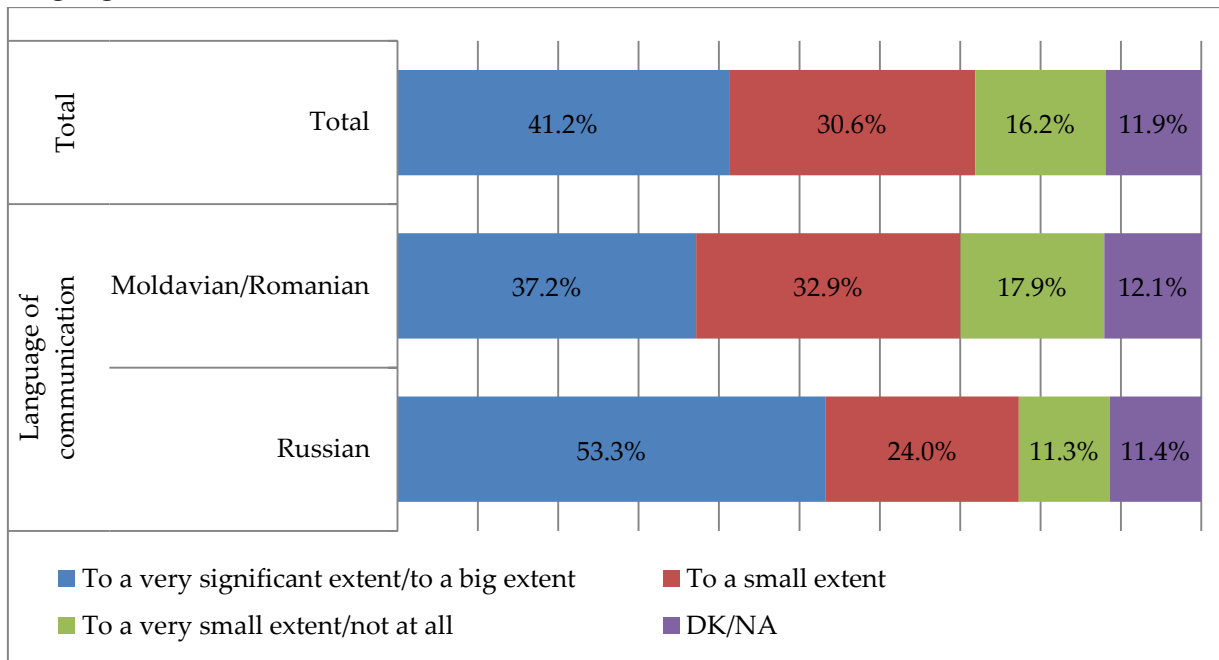

Young people prefer not to discuss politics with people closest to them (family, friends and colleagues). Only 19.2% of the interviewees mention discussing politics very often/often, and approximately 60.0% discuss politics rarely, very rarely or never. The 25-29 age group is the one who discusses politics the most (approximately 25.9% select very often/often). In terms of education, young people with a high education level discuss politics the most (approximately 31.0% answer positively) (Figure 2.5 and Table 178 in Annex).

**Figure 2.5. How often do you discuss politics with those closest to you (family, friends and colleagues)? (By age group)**

A fair share (41,2%) of respondents holds the same political opinions as their parents. The prevalence varies by language of communication: approximately 53.3% for Russian speakers vs. 37.2% for Moldavian/Romanian speakers (Figure 2.6 and Table 179 in Annex).

**Figure 2.6. To what extent do your political opinions resemble those of your parents? (By language of communication)**

Pro-West and pro-East sentiment splits Moldovan society and is reflected among young people. When they are asked to rate their views on a scale of 1 (Pro-West) to 10 (pro-East),

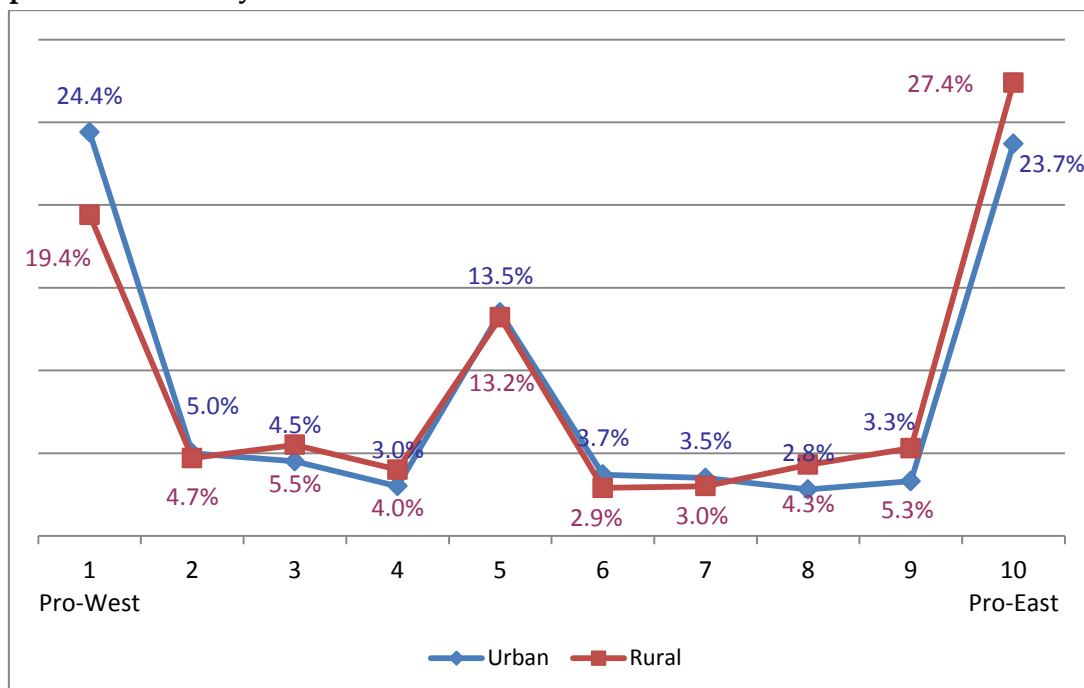

approximately 35.0% of respondents describe themselves as pro-West (choose 1 to 4) and 37.2% as pro-East (choose 7 to 10), while 16.5% hold less strong views (choose 5 or 6). 11.2% do not know or do not want to express their political views (Figure 2.7).

**Figure 2.7. On a scale of 1 (pro-West) to 10 (pro-East), where would you put your political point of view?**

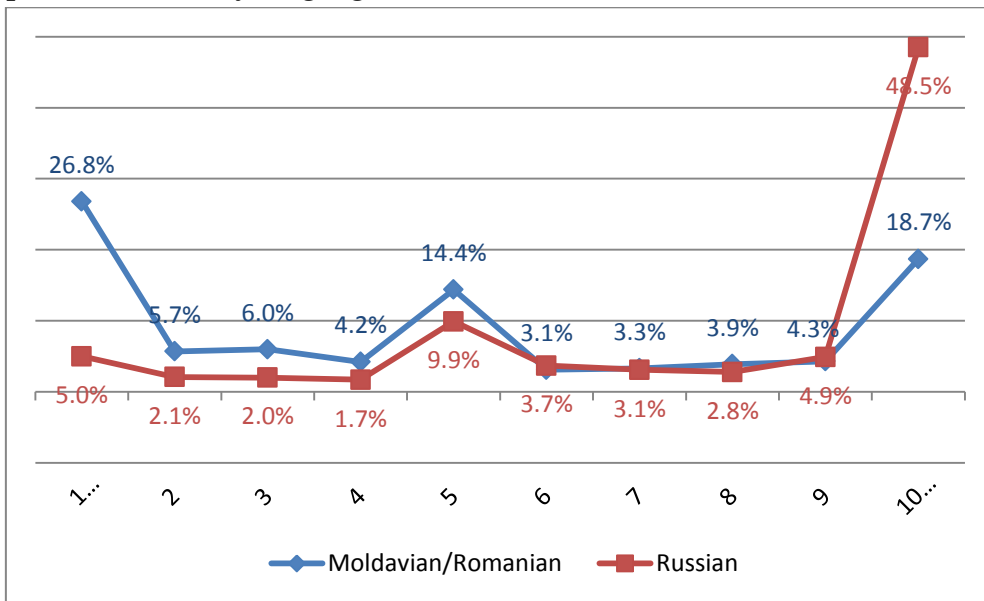

Results show certain tendencies by residence environment, with urban youth being slightly more oriented to the West and rural youth being slightly more oriented to the East. Thus, 36.9% are pro-West among urban youth (choose 1 to 4), while 33.3% are pro-East (choose 7 to 10). Among rural youth, 33.3% are pro-West while 40.0% are pro-East (Figure 2.8).

**Figure 2.8. On a scale of 1 (pro-West) to 10 (pro-East), where would you put your political point of view? (By residence environment)**

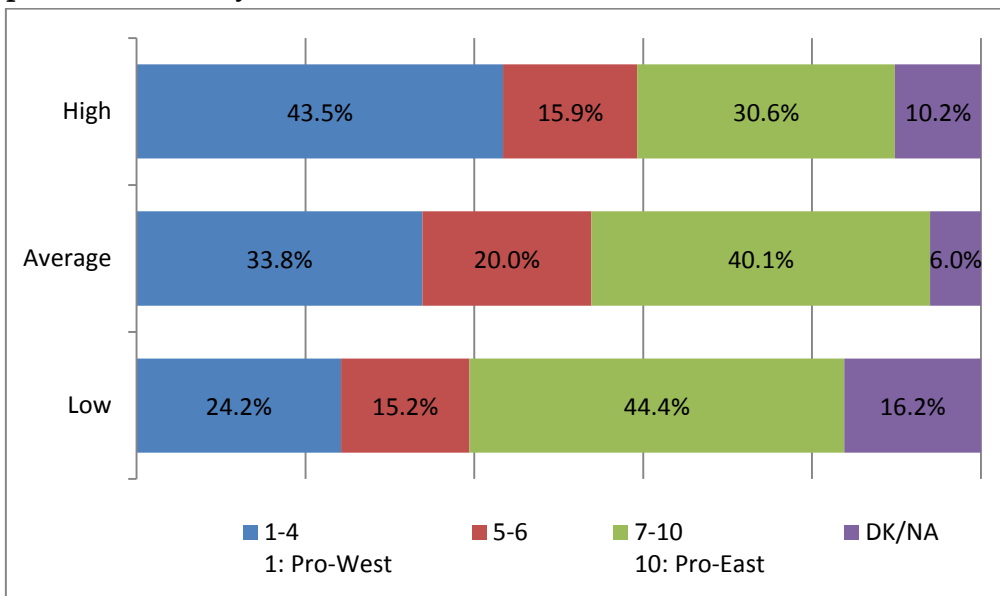

Contradictory tendencies also emerge along language lines. Approximately 42.7% of Moldavian/Romanian speakers are pro-West (choose 1 to 4), and 30.2% are pro-East (choose 7 to 10). Only 10.8% of Russian speakers are pro-West, and a significant percentage (59.3%) is pro-East (Figure 2.9).

**Figure 2.9. On a scale from 1 (Pro-Vest) to 10 (pro-Est), where would you put your political point of view? (By language of communication)**

Socio-economic status is also correlated with tendencies in political point of view: high status being pro-West and low status being pro-East (Figure 2.10 and Table 188 in Annex).

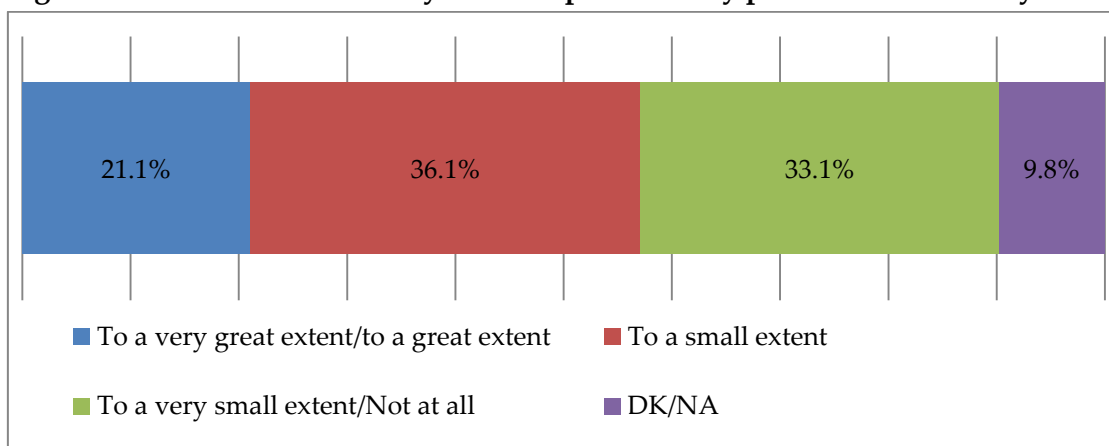

**Figure 2.10. On a scale of 1 (Pro-West) to 10 (pro-East), where would you put your political point of view? (By socio-economic status)**

Perceptions of being represented by politicians under the age of 30 also vary. Only 20.0% of respondents consider that they are represented by young politicians very much, while about 70.0% consider that they are represented by young politicians to a small extent or not at all (Figure 2.11). The negative perception is predominant (over 70.0% of responses) among young people with a low education level and low socio-economic status, employed youth and persons aged 25-29 (Table 189 in Annex).

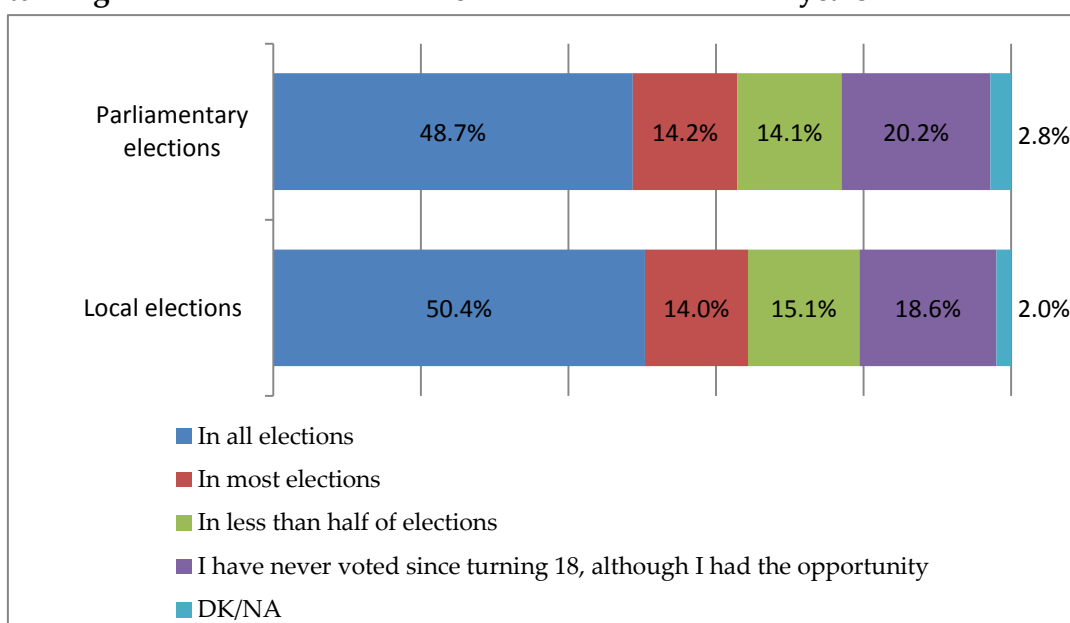

**Figure 2.11. To what extent do you feel represented by politicians under 30 years old?**

## 2.2. Electoral participation

The voting age in Moldova is 18. About 50.0% of young people aged 18 or over report voting in both parliamentary and local elections. Approximately 30.0% vote irregularly, and 20.0% have never voted since they have turned 18 (Figure 2.12). Young women and urban youth participate more actively in both parliamentary and local elections than do young men and rural youth (Tables 181 and 182 in Annex).

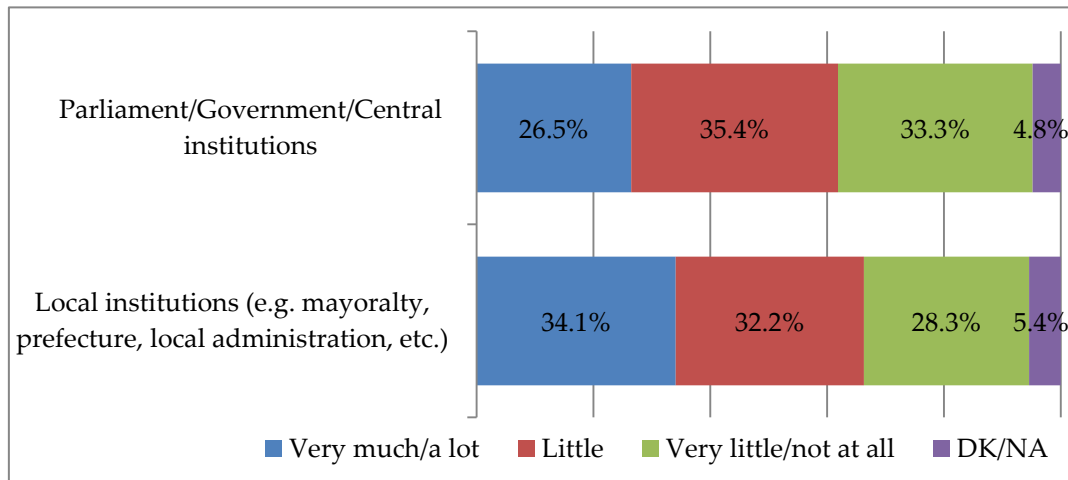

**Figure 2.12. From what you remember, how many times did you vote in elections as of turning 18 years old?**

Only 25.0% of respondents think people's votes influence the way Parliament/Government/Central institutions function very much/a lot. Less than 33.3% hold this opinion towards local institutions (e.g. mayoralty, prefecture, local administration, etc.) (Figure 2.13). Housewives, women, young people enrolled in educational institutions and Moldavian/Romanian speakers make up a significant percentage of affirmative answers regarding both electoral levels. Rates also differ depending on the residence environment;

37.4% of rural youth vs. 29.7% of urban youth think people's votes influence the way local institutions function (Table 186 in Annex).

**Figure 2.13. In your opinion, how much influence do people’s votes have on the way government institutions function?**

Some participants in discussion groups note that the present government disappoints them and that they do not intend to participate in the next elections.

*People from the government make people fight with each other and want them to split into two camps. I will never participate in elections again. Last time I was asked to vote for them, and they flattered me. (Female, 21, 3 FG: Young people from vulnerable/poor families)*

Qualitative research asked about young people's opinions on granting the right to vote at age 16. Some politicians publicly advocate for the necessity of reducing the voting age to 16 years old, arguing that 16-year-olds are ready to assume civic responsibilities. The majority of young people interviewed in discussion groups, however, do not consider people at that age ready to vote conscientiously, citing the following risks: susceptibility to manipulation, influence and voter fraud. Lack of experience and responsibility, indecision, and a focus on age-specific concerns make 16-year-olds vulnerable to politicians. Young Russian speakers especially voice these issues.

*At the age 16, a person doesn't understand much about things, doesn't follow much the news. They are told, "Go and vote, and you will be paid 100 lei. "Those who are 16 cannot guide themselves, and they can be told, "Go and vote, and we will invite you for barbeque." (Male, 29, 4 FG: Ethnic minority young people, Russian speakers)*

*They are more easily manipulated and influenced than those who are 18 and who can say no and that's all. Those who are 16 are still malleable. (Female, 21, 4 FG: Ethnic minority young people, Russian speakers)*

*Those who are 16 know that they will not be called up for military service until they reach 18 and*

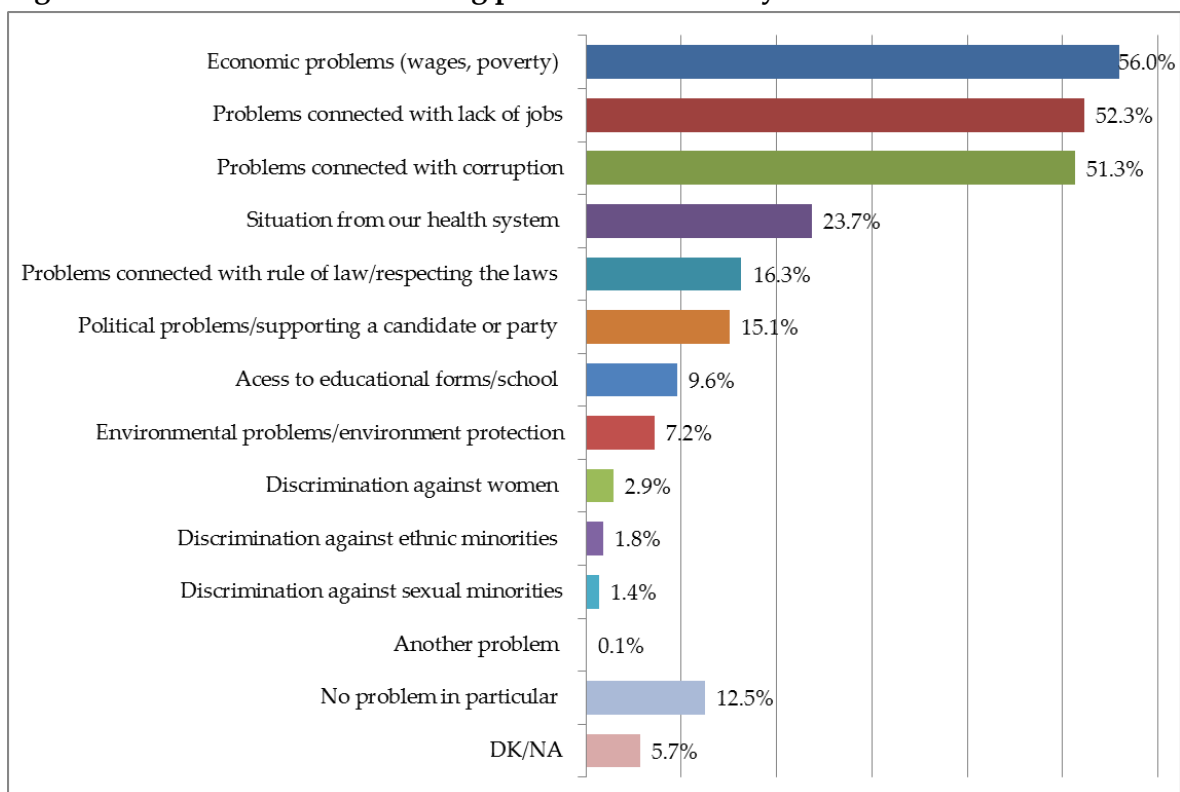

*have other topics to think about. Those who are 18 will think to go to study, to work or to serve in the military, and it is necessary to vote for someone who can change things. Those who are 16 don't have their own opinions and are easily manipulated by parents who have their own opinions. (Male, 22, 4 FG: Ethnic minority young people, Russian speakers)*

Some young people acknowledge the benefits of gaining voting rights at 16 years-old: for instance, involving young people and motivating them to be more interested in and responsible for political life. It may also make young people feel more important and impart a stronger desire to change and improve the situation in the country.

### 2.3. Civic engagement

In democratic countries, the population can express opinions and seek to solve societal problems through various actions, including participation in elections, referenda, demonstrations and protests. When they are asked about the societal problems they care about the most, 56.0% of the young interviewees cite economic issues (low wages, poverty), 52.3% lack of jobs and 51.3% corruption. Less prominent concerns include problems in the health care system (25.0%); problems related to rule of law and respect for the law (16.3%); political issues and support of one candidate of a party (15.1%); access to education (10.0%); and environmental issues (7.2%). Only 3.0% of respondents are concerned about issues of discrimination (Figure 2.14).

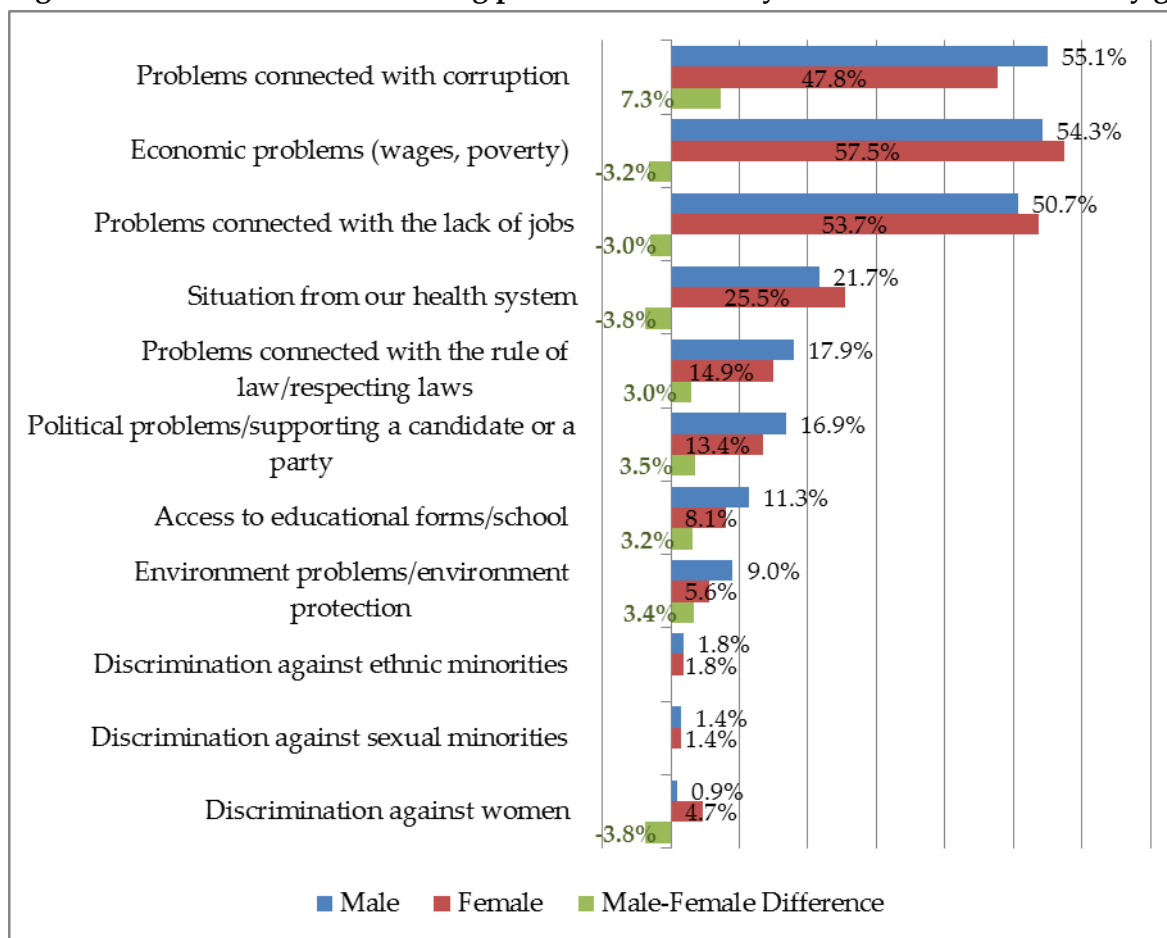

**Figure 2.14. Which of the following problems/issues do you care about the most?**

The research also points out some gender differences. Male respondents are more concerned about corruption, rule of law, politics, education and the environment. Female respondents are

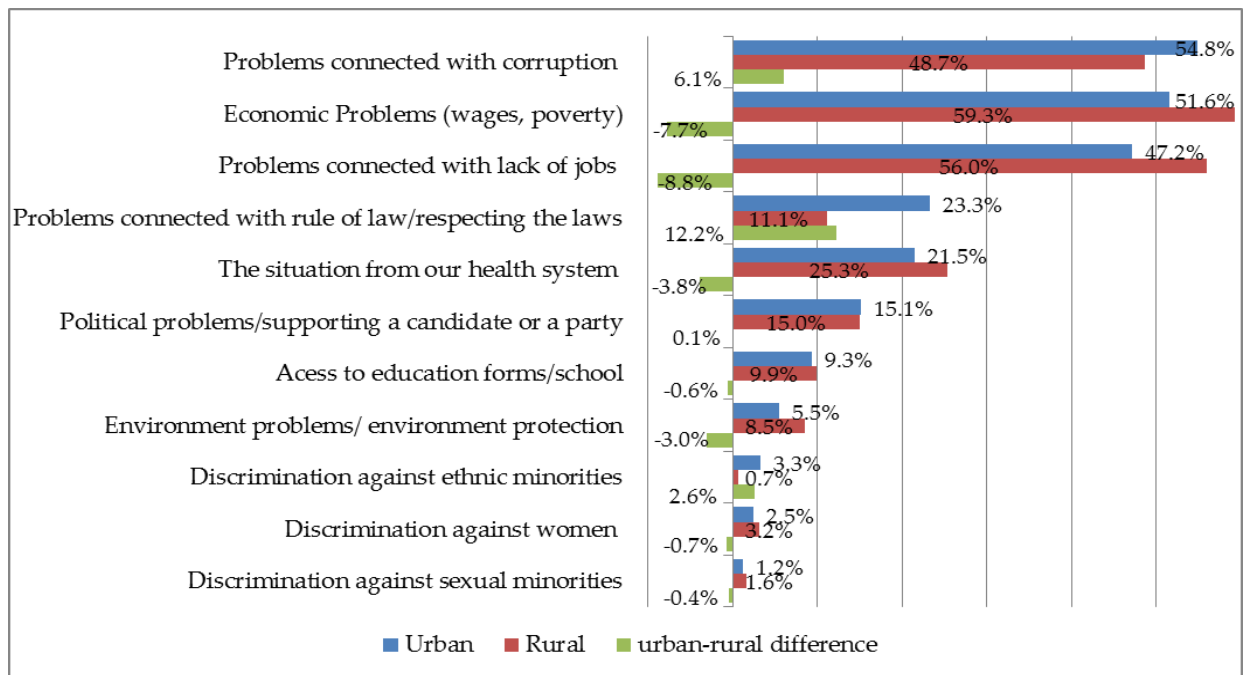

more concerned about economics, unemployment, health care and discrimination against women (Figure 2.15).

**Figure 2.15. Which of the following problems/issues do you care about the most? (By gender)**

The research also finds differences along residence environment, education level and socio-economic status. Young people from urban areas care more about corruption, rule of law and discrimination against ethnic minorities, while rural youth care more about economics, unemployment, health care and the environment (Figure 2.16). In addition, those with a high education level are concerned about economics, unemployment and corruption; the respective groups had a response rate of over 60.0%. Over 65.0% of housewives are concerned about economics and unemployment (Tables 183 and 184 in Annex).

**Figure 2.16. Which of the following problems/issues do you care about the most? (By urban/rural)**

Although over 50.0% are concerned about certain civic problems, young people display low civic activity. Only 33.3% state they would participate in protests or demonstrations in support of the problem that concerns them the most. Overall, only 12.1% say they would certainly participate in planned protests in support of their main issues. Over 60.0% state they certainly or probably would not. Activism is more prominent among young men than women; 37.1% vs. 32.7% answer positively (Figure 2.17). The majority of those willing to participate have a high education level and high socio-economic status (38.0%) (Table 185 in Annex).

**Figure 2.17. If there were protests or demonstrations for the problem you care about in the coming months, would you participate? (By gender)**

Participation rate at meetings is extremely low. Only 5.9% of interviewed young people had participated at a local meeting in the previous 12 months. Among them, 8.8% are aged 25-29, 7.7% are rural youth, and 3.4% are urban youth (Table 190 in Annex). Half of respondents who answer positively had participated at two meetings in the reference year (Table 191 in Annex). The rate of reported participation in youth organisations (local youth councils, district youth councils, local initiative groups, political party youth wings, non-governmental organisations [NGOs]) is below statistical significance at less than 3.0% (Table 192 in Annex).

A large number of the interviewees say they are not interested in politics and do not participate in civic activity because they do not believe they can bring about change: "To gather people in front of the parliament building and all is in vain". The purpose of protest has also been compromised in the last period as participants in various demonstrations admit that they did not know the goal of the protest. Mass media has reported that "most of them are paid and don't even know why they came here".

During the group discussions, respondents highlight several reasons why young people are not involved in local socio-political life. They assert that young people's actions are not appreciated by authorities and other citizens; that young people lack financial and moral support from citizens; that they are punished for taking initiative and that they are indifferent.

*Young people are not appreciated. Young people are not listened to. Even if they are listened to, the authorities do not react. (youth focus group)*

*Even if young people start doing something, there is always someone who says, "Why do you need to do it? Better go and drink beer. No one will appreciate it." It is said by people who are in power. And you suddenly stop and ask yourself, "Why for? No money. That's all. Just calm down." (Male, 20, 4 FG: Ethnic minority young people, Russian speakers)*

*When I lived in X, I worked for a TV channel. We made reportages on different topics related to problems with public toilets in the city. We made a film about a school canteen that was in a very bad condition, and children were forced to run to the nearest shop during breaks. But it was not correct because during the educational process children are not allowed to go beyond the school gate. I made a film and school showed its negative attitude towards me. The reportage was appreciated not by the school but by an organisation that was very interested in that problem. (Female, 22, 4 FG: Ethnic minority young people, Russian speakers)*

*Young people in general are indifferent; expect that parents will always support them. (youth focus group)*

## **2.4. Youth centres and services**

Several youth centers provide a variety of services to target groups. With the involvement of young people, these centres carry out educational and methodical activities; cultural activities and service provision, including training and access to information; civic participation and human rights defence and social reintegration; skills training and professional integration; entrepreneurship development; volunteering; promotion of healthy lifestyle; and prevention of

human trafficking and domestic violence (Chapter 4 for further discussion). Despite this, only 25% of respondents are aware of such centres. Women are more informed than men (31.0% vs. 18.8%). Awareness is also higher among urban youth compared with rural youth (32.0% vs. 20.3%) (Figure 2.18).

**Figure 2.18. Please answer yes if you have personal knowledge or have heard of youth centres that offer various services for youth. (By gender and residence environment)**

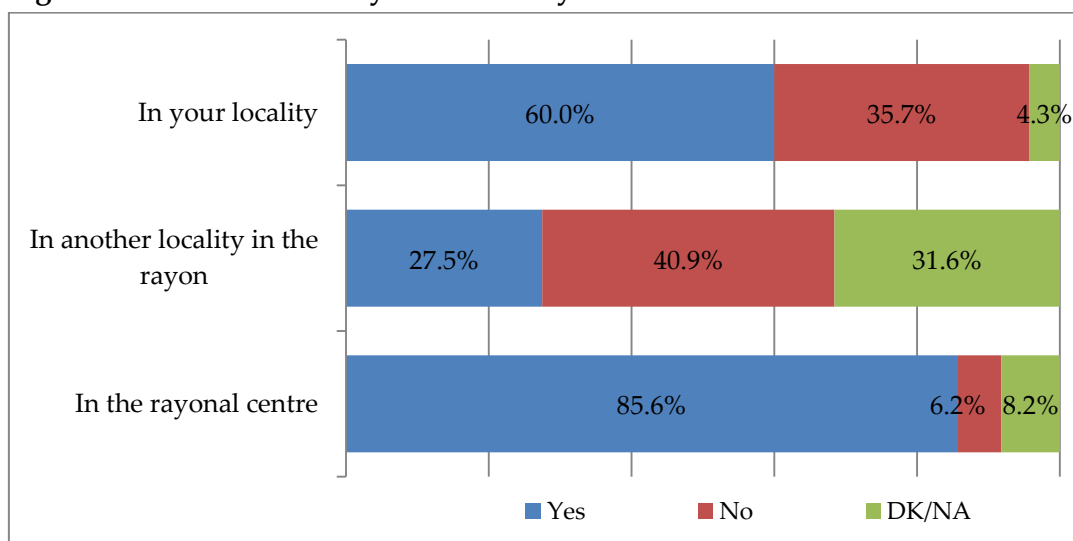

Awareness of youth centres is directly correlated with education level and socio-economic status: the higher for each, the more well informed (Figure 2.19). Young people enrolled in educational institutions are more aware than those not enrolled (35.8% vs. 19.1%). By age group, young people aged 14-18 are more informed than young people aged 25-29 (29.6% vs. 20.1%) (Table 194 in Annex).

**Figure 2.19. Please answer yes if you have personal knowledge or have heard of youth centres that offer various services for youth. (By education level and socio-economic status)**

Among those who are aware of youth centres, 60.0% state they are located in their resident localities, 27.5% say that they are located in other localities in the rayon, and 85.6% in the rayonal centre (Figure 2.20 and Table 195 in Annex).

**Figure 2.20. Where are the youth centres you know or have heard of located?**

The results relate to the fact that services provided by youth centres are not used by young people. Only 16.3% of respondents who are aware of the centres have benefited from their services: 20.8% among urban areas, which is almost twice the rate as among rural youth. The rate is also higher among young people enrolled in educational institutions (19.0% vs. 13.3% among those not enrolled) (Figure 2.21). Other socio-demographics with greater use rates are youth with high socio-economic status (22.8%), single young people (19.0%) and those with an average education level (21.1%) (Table 196 in Annex).

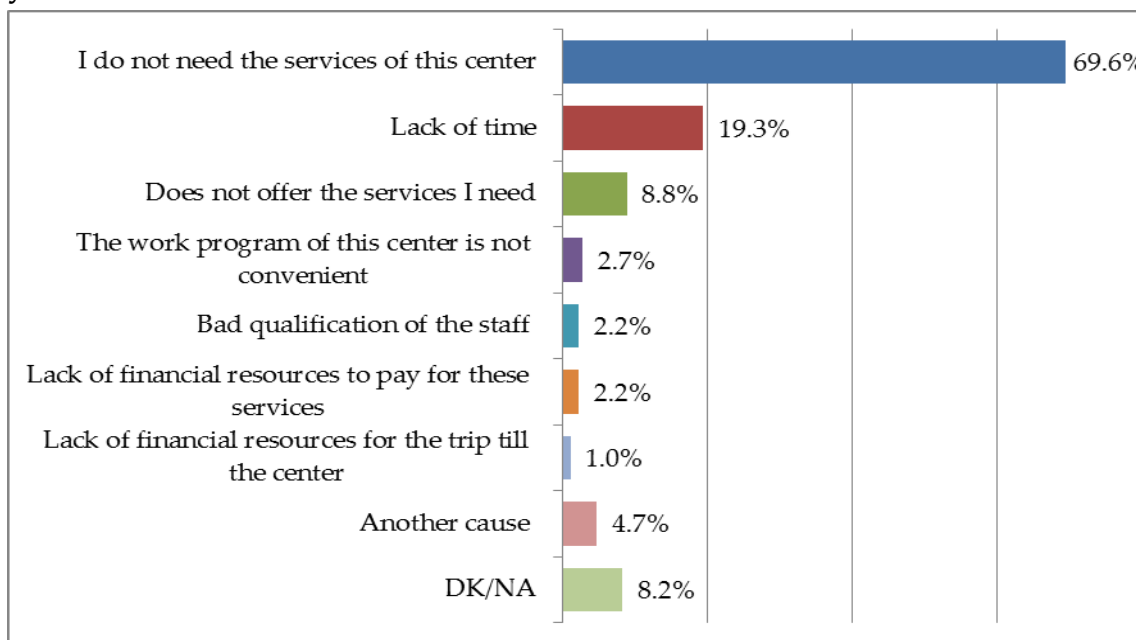

**Figure 2.21. Have you benefited from or participated in any services or opportunities offered by a youth centre? (By enrolled in educational institutions and residence environment)**

The reasons why 82.6% of young people do not use youth centre services differ. About 69.6% of respondents mention that they do not need the services, while 19.3% say they do not have time, and about 8.8% note that the centres do not provide the services they need. Other reasons account for the remaining 3.0% (Figure 2.22 and Table 197 in Annex).

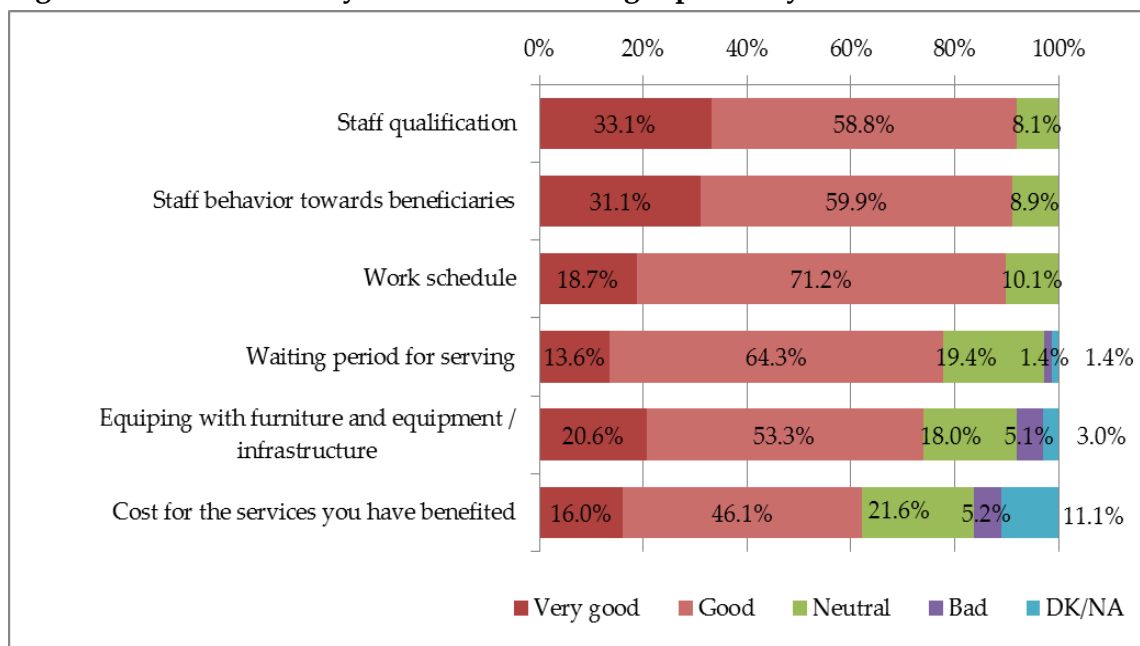

**Figure 2.22. Which are the most important reasons you have not previously benefited from youth centre services?**

Respondents who have benefited from youth centre services assessed the quality of certain aspects from very good to very bad. The highest favourable assessments are for the staff qualification and staff behaviour towards youth clients. Over 90.0% of respondents assess these

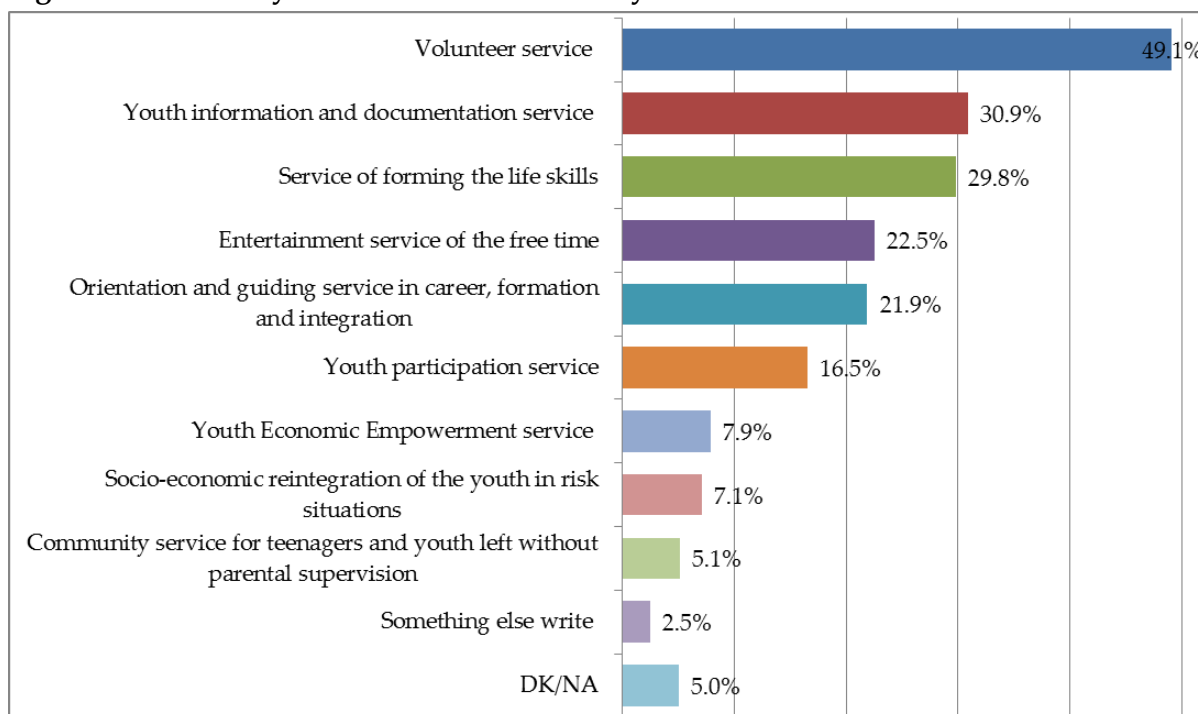

criteria as very good/good, with about 33.3% rating them very good. Equipment/furniture and cost of services receive the lowest ratings (Figure 2.23 and Tables 198-200 in Annex).

**Figure 2.23. How would you rate the following aspects of youth centres?**

In terms of the youth centre services used by young people, about 50.0% of respondents benefit from volunteering, about 30.0% from youth information and documentation services, 30.0% from life skills training, almost 20.0% from recreation, and almost 20.0% from professional orientation and career guidance, training and integration. Respondents benefit least from services targeting vulnerable groups, such as socio-economic reintegration of young people in risky situations and community service for teenagers and young people without parental supervision (Figure 2.24).

**Figure 2.24. Which youth centre services have you benefited from?**

Young men and women benefit from different youth centre services. A higher percentage of men than women (28.0% more) benefit from youth participation services and recreation. The differential narrows for other services. Between 7.0% and 15.0% more men than woman benefit from community services for teenagers and young people without parental supervision; volunteering; youth economic empowerment; and professional orientation and career guidance, training and integration. About 22.0% more women than men benefit from life skills training; about 11.0% more women benefit from youth information and documentation services.

Residence environment also affects service choices. Urban youth benefit more from volunteering; socio-economic reintegration of young people in risky situations; community services for teenagers and young people without parental supervision; as well as recreation. Rural youth benefit to a greater extent from youth information and documentation services; life skills training; professional orientation and career guidance service, training and integration; and youth participation services (Tables 201 and 202 in Annex).

The majority of respondents (85.6%) are satisfied with youth centre services, and 32.0% are very satisfied. More men than women report being very satisfied/satisfied (about 95.5% vs. 79.7%) (Figure 2.25). Young people enrolled in educational institutions account for the largest majority satisfied with the services at 97.1%. Young people aged 19-24 are also satisfied with a high rate at 93.9% (Table 203 in Annex).

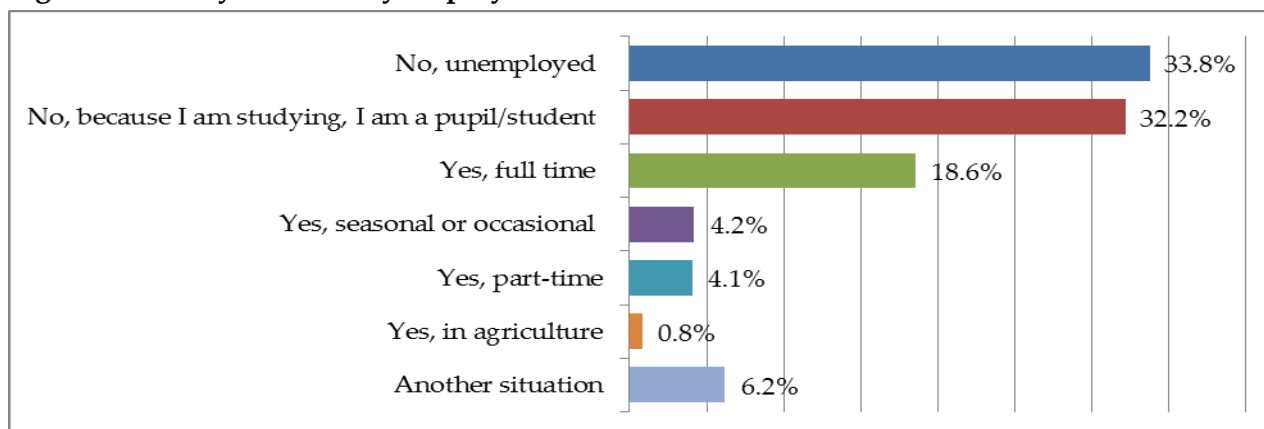

**Figure 2.25. How satisfied are you with your youth centre service(s)? (By gender)**

### 3. Employment

About 33.3% of respondents are unemployed and 33.3% are enrolled in educational institutions. Nearly one-third (27.7%) are employed, 18.6% of whom work full-time (Figure 3.1). More men are employed than women (35.7% vs. 13.0%), and more women are unemployed than men (35.8% vs. 31.6%). Additionally, more urban youth are employed than rural youth (37.5% vs. 20.5%), and more rural youth are unemployed than urban youth (39.6% vs. 26.0%) (Table 96 in Annex).

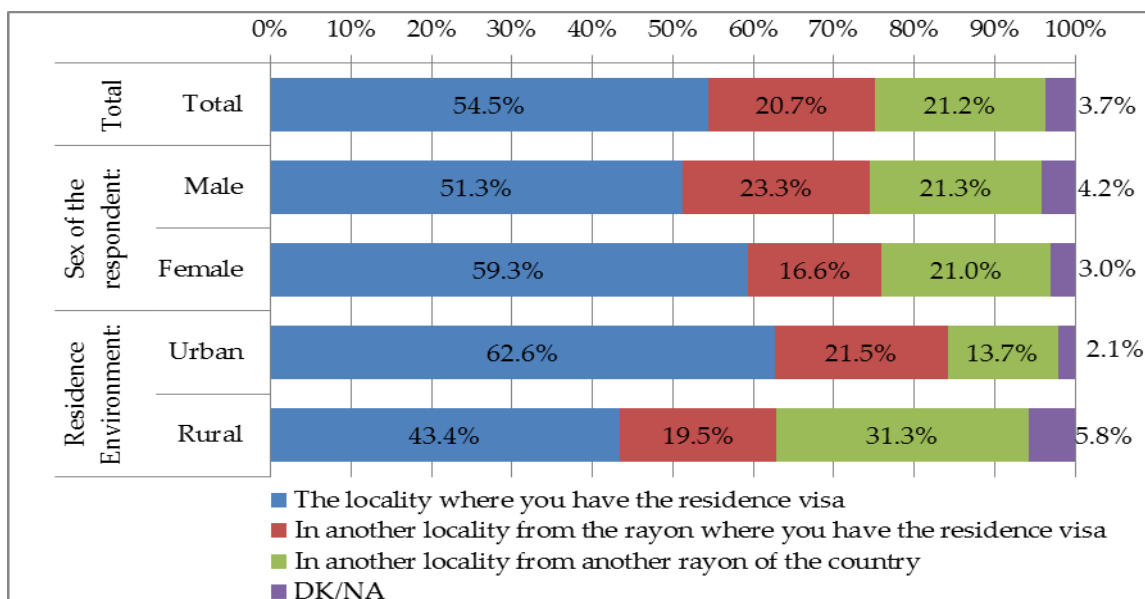

**Figure 3.1. Are you currently employed?**

#### 3.1. Employment and occupational status

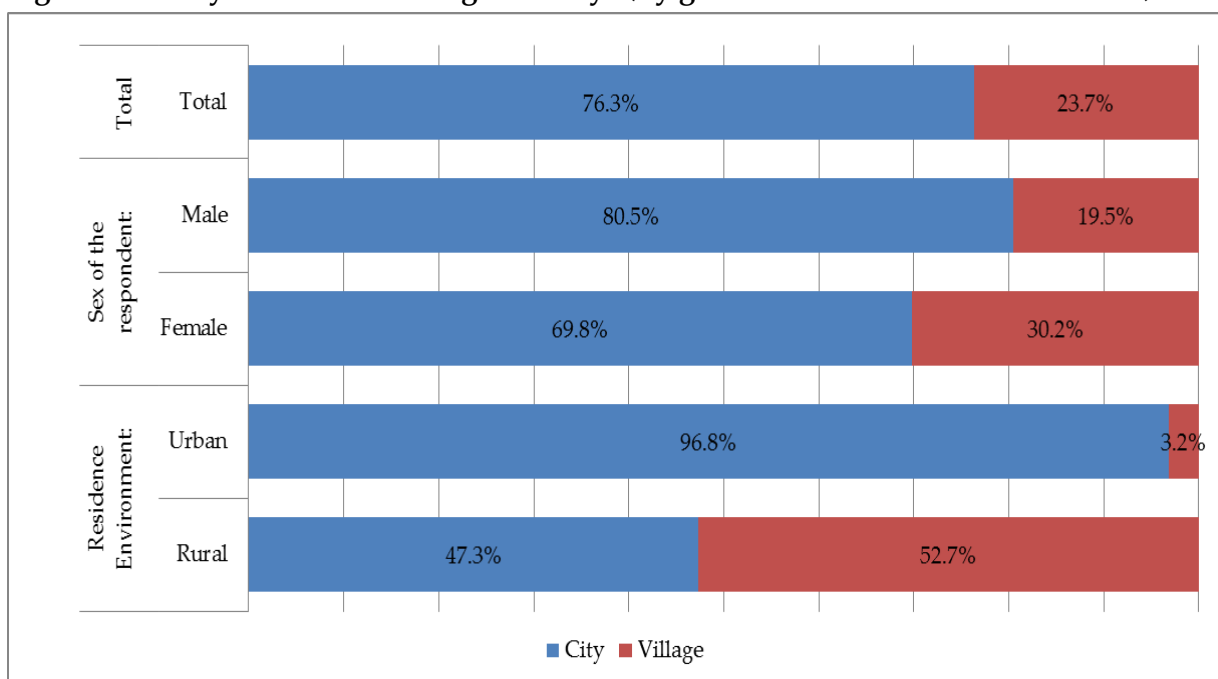

Less than 50.0% of employed young people have jobs in their resident localities. About 20.7% have jobs in other localities within their rayon. This confirms assumptions about hidden internal migration for employment purposes. More women than men are employed in their resident localities (59.3% vs. 51.3%). Rural youth also exhibit a higher rate of mobility for employment. Only 43.4% have jobs in their resident localities; over 50.0% have jobs in other localities, and 33.3% work in other rayons (Figure 3.2). Young people who work and study also demonstrate higher labour mobility. Nearly half (49.5%) of them work outside their resident localities, while nearly half (48.5%) have a low socio-economic status and education level (Table 100 in Annex).

**Figure 3.2. Where is your workplace located? (By gender and residence environment)**

Lack of employment opportunities in rural areas significantly affects the youth employment picture in the Republic of Moldova (RM). The majority of respondents (76.3%) work in towns and cities. Over half (52.7%) of employed rural youth work in cities (Figure 3.3). This is confirmed by other statistics that highlight the concentration of young people in urban areas, particularly in big cities. The majority of young people who work in cities have a high education level and high socio-economic status: over 80.0% for both characteristics vs. 60.0% for youth with a low education level and low socio-economic status (Table 101 in Annex).

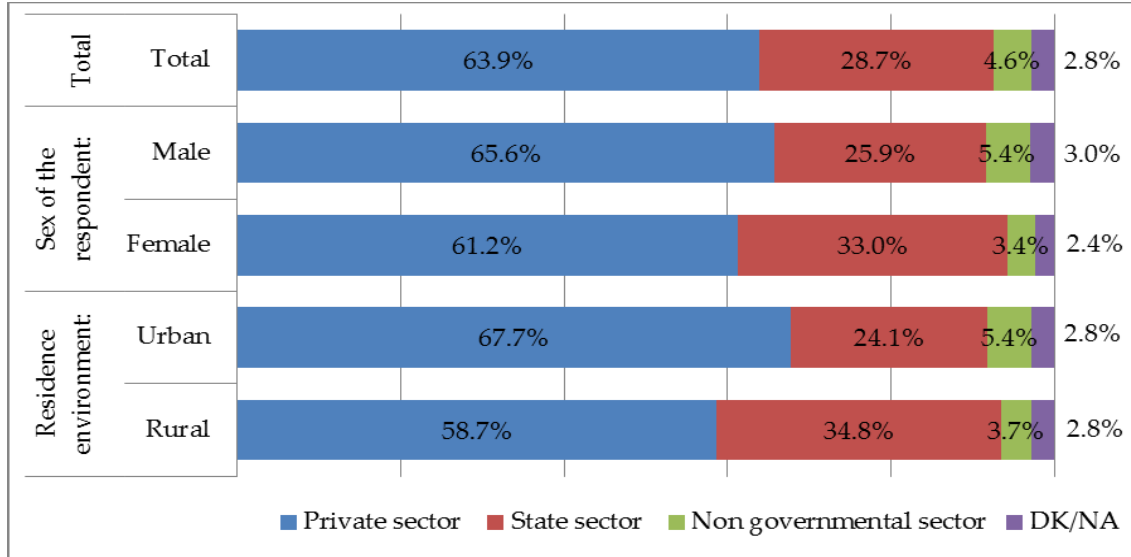

**Figure 3.3. Do you work in a village or a city? (By gender and residence environment)**

The percentage of young people employed in the private sector is twice that in the state sector. The percentage of women employed in the state sector is 7 percentage points higher than the

percentage of men. More urban than rural youth are employed in the private sector, while more rural than urban youth are employed in the state sector (Figure 3.4). A higher percentage of young people with a low education level are employed in the private sector in comparison to those with a high education level (70.2% vs. 57.4%) (Table 102 in Annex).

**Figure 3.4. In what sector are you employed? (By gender and residence environment)**

Young people work predominantly in commerce, hotels and restaurants (18.2%), services (16.5%), construction (14.3%), transport and communication (9.4%) and industry (8.4%). About 6.0% work in public administration, education, agriculture, hunting, forestry and fishing. Only 4.0% are employed in other sectors (Figure 3.5).

**Figure 3.5. In what sector do you currently work?**

A larger proportion of men than women work in construction, transport and communication. Most women are employed in commerce, hotels and restaurants, services, and education. In urban areas, the majority of young people work in commerce, hotels and restaurants (24.3%), services (21.5%), and construction (12.4%). In rural areas, youth tend to work in construction (16.9%); agriculture, hunting, forestry and fishing (13.1%); and public administration (10.7%) (Tables 103 and 104 in Annex). The majority of employed youth are employees (92.1%), while only an insignificant proportion, about 2.0%, are employers or self-employed (predominantly men and rural youth) (Table 105 in Annex). Over 50.0% of young people work more than 40 hours per week, with a maximum of 90 hours, a minimum of 15 hours and an average of 42.8 hours (Table 107 in Annex).

Over half (55.1%) of respondents have been working at the same workplace for more than one year (Figure 3.6). This tenure is correlated with education level and socio-economic status: 64.1% of youth who have been working at the same workplace for more than one year have a high education level while 61.6% have a high socio-economic status vs. 45.7% and 46.3%, respectively, for those with a low education level and low socio-economic status (Table 106 in Annex).

**Figure 3.6. How long have you been working at your workplace?**

In group discussions, young people mention having frequently changed workplaces in recent years, mostly due to unsatisfactory salary, lack of opportunities for promotion and family problems.

*“When I changed my workplace, at the beginning I was interested in work, but then I was unsatisfied with salary or employees were changed constantly or companies closed or there were family problems.” (Male, 29, 4 FG: Ethnic minority young people, Russian speakers)*

*“I was also in such situation. I changed my workplace many times. I worked in one place, then in other place, in trade, selling furniture, shoes. When I achieved a certain level, I understood that I gained all the necessary skills at that position and then I quit.” (Female, 28, 4 FG: Ethnic minority young people, Russian speakers)*

### **3.2. Quality of employment and job satisfaction**

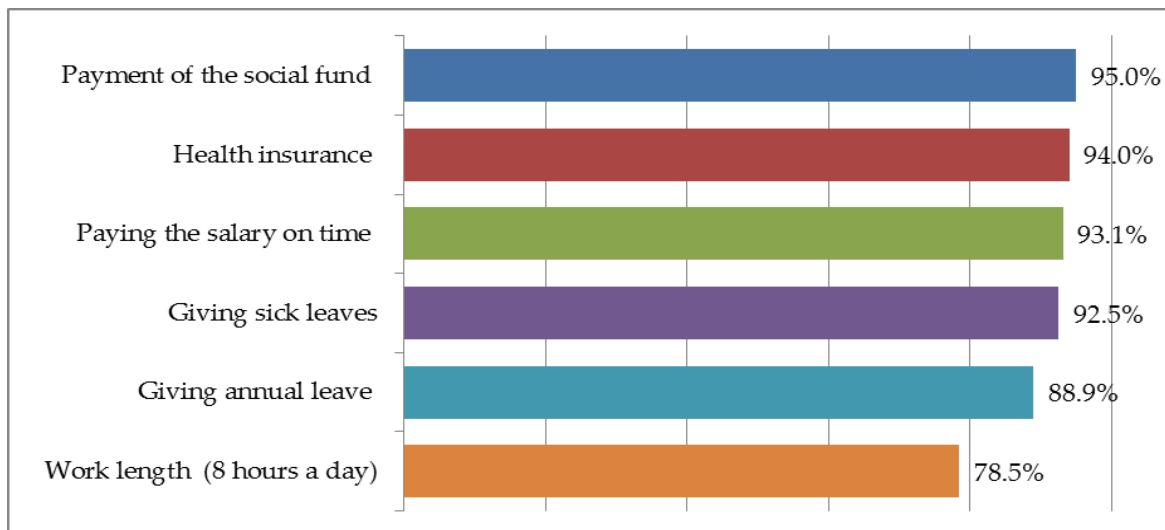

Informal employment still exists in Moldova, and young people are no exception. About 33.3% of employed youth do not have work contracts, despite the future challenges informal employment poses. Young men are more willing than women to work without a contract: 33.3% vs. 28.2%. A greater proportion of rural than urban youth work informally: 38.9% vs. 25.6% (Figure 3.7). Young people with a high education level represent the greatest majority (85.4%) of those with work contract, followed by young people with high socio-economic status (77.1%) (Table 97 in Annex).

**Figure 3.7. Is your work formal based on a work contract? (By gender and residence environment)**

Work contracts provide employee benefits to varying degrees. The research finds that 95.0% of contracts pay into social insurance, and 94.0% pay into health insurance. The least prevalent benefits are a guaranteed 8-hour work day and annual leave (Figure 3.8).

**Figure 3.8. Which employment standards provided for in law are included in your work contract?**

Employment benefits are granted with even less frequency to rural formally employed youth, particularly health insurance, social insurance and annual leave (Figure 3.9 and Tables 98 and 99 in Annex).

**Figure 3.9. Which employment standards provided for in law are included in your work contract? (By residence environment)**

The research also looked at skills mismatch in youth employment. Given four scenarios, over 33.3% of employed respondents do not have a job-related educational background; only 27.0% do have a job related to their educational background. About 20.0% work in fields different from their educational backgrounds, while 11.4% work in fields close to their educational backgrounds (Figure 3.10). A large proportion of young people (27.4%) working in a field different from their educational backgrounds have a high level of education (Table 108 in Annex).

**Figure 3.10. Which of the following statements best describes your employment-education situation?**

Young people’s satisfaction with various aspects of their employment conditions varies but is overall positive. The majority of respondents (80.3%) are very satisfied/satisfied with the attitudes and behaviours of colleagues and employers towards them (80.3% and 74.9%, respectively). Moreover, 67.1% are very satisfied/satisfied with services. Wage shows the lowest level of satisfaction; 47.3% select very satisfied/satisfied, and over 25.0% answer dissatisfied/very dissatisfied (Figure 3.11).

Young people interviewed in this group discussion also emphasise that salaries in most domains in Moldova are low compared to cost of living, and youth employment is particularly prone to this disparity. Employed respondents indicate that they cannot maintain their own standard of living, let alone whether they could with a family and children. Rural youth who cannot find jobs in their localities have to pay for the added costs of rent and/or transport. In order to increase their incomes and to ensure their daily needs, some young people have two jobs, and others would like to find a second job.

*I work, but my salary is not sufficient. That's why sometimes I need to ask for money from my parents to make ends meet. I don't know what to do to improve our lives because our salaries are very low. (Female, 19, employed at a sewing factory, F2: Young women from rural areas)*

*If you don't have a possibility to find a job in your locality, you have to pay for renting, transport, and it's very expensive. (Female, 19, student, 2 FG: Young women from rural areas)*

*I am not satisfied. I have a job now, but I am not satisfied because all is so miserable. Salary is very low. If I can find one more job, even part time, then I can consider that I get an average salary. Now my salary is less than average. I am not satisfied with life in Moldova. (Male, 29, 4 FG: Ethnic minority young people, Russian speakers)*

*You cannot survive in Moldova having only one job. I have one part-time job and another is related to selling perfumes that brings me more income. The salary that I get from my first job is only enough to cover my utility services and kindergarten. (Female, 28, 4 FG: Ethnic minority young people, Russian speakers)*

Some young people are dissatisfied/very dissatisfied with the fact that some employers take advantage of young people's inexperience, only hiring them for an unpaid trial period of about one month. They consider the trial too long, as they incur the costs of rent, food and transport while performing the work throughout. In respondents' opinion, employers benefit from not paying young people.

*For example, a person studied, came from a village, rents an apartment here. He works for two weeks, a month, and then he is told, "We are not satisfied with your job", and he is fired. He goes to another company, works again three to four months, and then he says to himself, "Why do I have to work for someone? They will fire me, will benefit from my job and will not pay me." (Male, 29, 4 FG: Ethnic minority young people, Russian speakers)*

Young people who have formal jobs are only satisfied to some extent with their salaries and tend to migrate to other countries. The main reason is uncertain job prospects.

*I like my job. I get an average salary, but it could be more. But if I get some offers to work in Europe, I will not even hesitate. I will migrate there. There is no prospects here. Today is good, but tomorrow is unclear. (Male, 29, formally employed, 4 FG: Ethnic minority young people, Russian speakers)*

The greatest proportion of respondents who are generally very satisfied/satisfied with their jobs are those with high socio-economic status (76.1%) and those from urban areas (75.6%). The groups most dissatisfied/very dissatisfied are young people from rural areas (about 16.6%) and those with have an average education level (about 16.0%). The groups most satisfied with their

salaries are young people with a low education level (50.0%) and those from urban areas (50.0%). The groups most dissatisfied/very dissatisfied with their salaries are young people with low socio-economic status (over 30.0%) and those from rural areas (Table 110 in Annex).

Young people enrolled in educational institutions (about 72.8%), those with a high education level (66.5%) and high socio-economic status (67.7%) are very satisfied/satisfied with their working conditions. In contrast, respondents with low socio-economic status (over 30.0%) are dissatisfied/very dissatisfied with their working conditions. For instance, young people enrolled in educational institutions (78.5%) and those with average socio-economic status (70.8%) are very satisfied/satisfied with the length of the work day, whereas respondents with low socio-economic status are dissatisfied/very dissatisfied with it (Table 111 in Annex).

The majority of young people are very satisfied/satisfied with the attitude and behaviour of employers towards them: about 87.5% of those enrolled in educational institutions and 81.0% of those from urban areas. Similarly, respondents enrolled in educational institutions, those with an average education level and those from urban areas are very satisfied/satisfied with the attitude and behaviour of colleagues towards them, with response rates of 95.4%, 85.5% and 85.5%, respectively. Respondents with low socio-economic status are dissatisfied/very dissatisfied with this aspect at a rate of 11.6% (Table 112 in Annex).

**Figure 3.11. How satisfied are you with the following aspects of your current employment?**

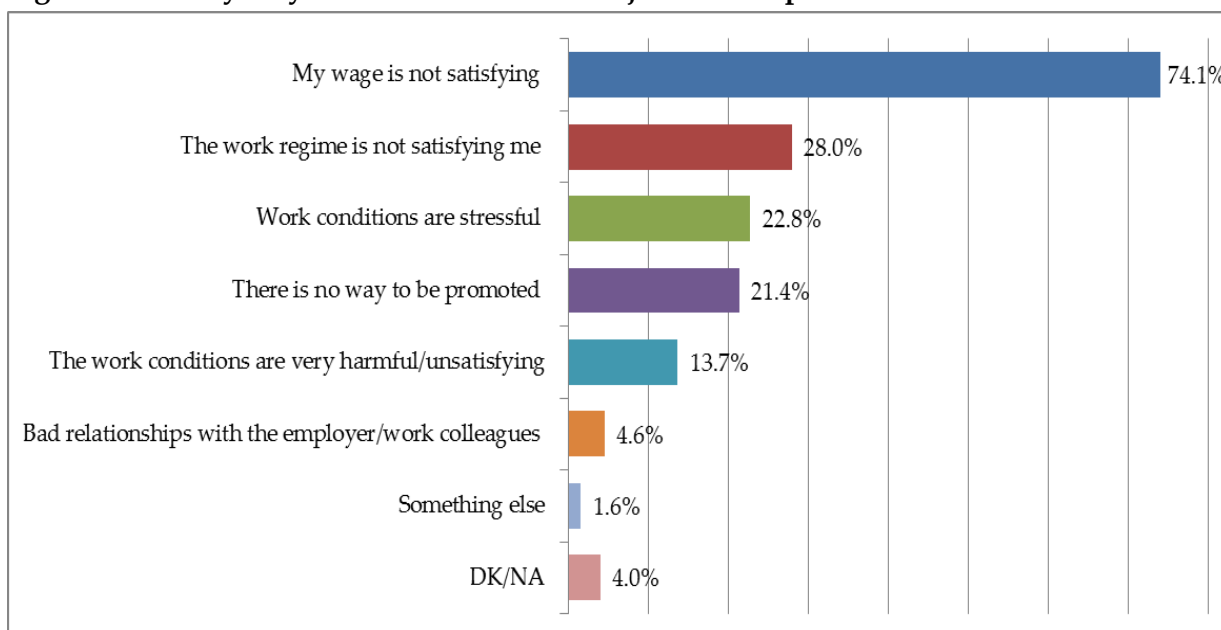

Low level of satisfaction with working conditions make people think about other employment opportunities. More than half (53.7%) of respondents think about looking for another job. The youth labour market mobility is correlated with their socio-economic status. The proportion of respondents with low socio-economic status looking for another job is 63.8%, a 15-percentage point difference from those with high socio-economic status (Figure 3.12). Higher rates occur also among unmarried young people (57.3%) and those with an average education level (57.3%) (Table 113 in Annex).

**Figure 3.12. Please answer yes if you have thought of looking for another job. (By socio-economic status)**

The main reason for looking for another job or workplace is dissatisfaction with salary, selected by about 75.0% of respondents – three times more than the prevalence of the next most selected responses: dissatisfaction with work schedule (28.0%), stressful work conditions (22.8%) and lack of promotion opportunities (21.4%) (Figure 3.13). Of that majority dissatisfied with salary, 92.7% have a low education level (Table 114 in Annex).

**Figure 3.13. Why do you want to find another job or workplace?**

### 3.3. Unemployment and access to work

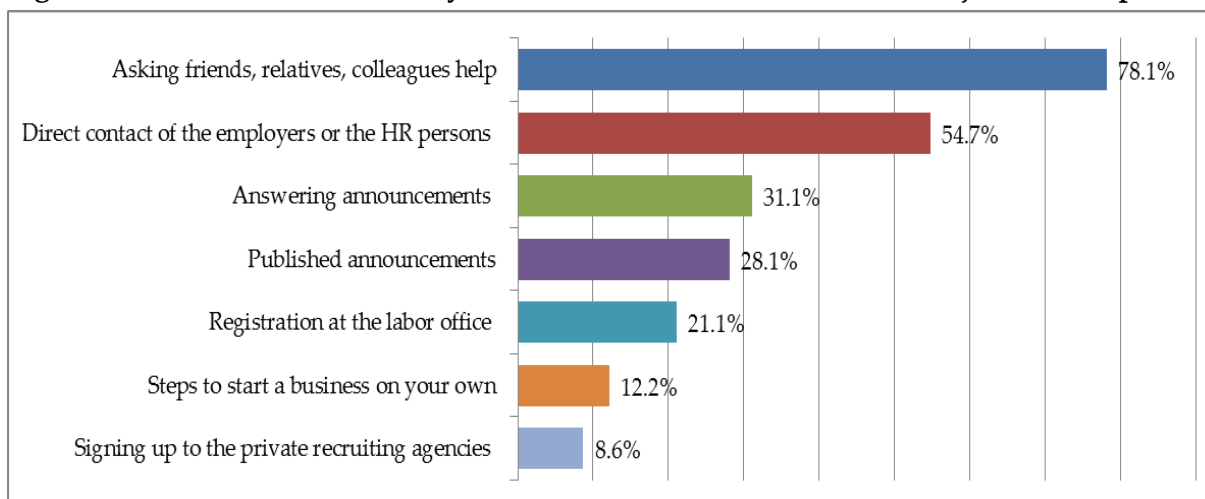

Among unemployed young people, 41.0% are looking for a job or workplace, and about 27.0% had looked in the previous 12 months. The proportion of youth looking for a job or workplace with a high education level is twice the proportion of those with a low education level (Figure 3.14), and 36.0% are aged 25-29 (Table 115 in Annex).

**Figure 3.14. Please answer yes if you looked for a job or workplace in the last 12 months. (By education level)**

The most selected job search methods are asking a friend/relative/colleague (78.1%) and contacting employer/human resource (HR) manager (54.7%). A smaller percentage (12.2%) start businesses at their own expense (Figure 3.15). Job search methods differ along gender and residency environment. Men more often ask friends/relatives/colleagues or contact employers/HR managers directly; women more often register at employment offices. Rural youth tend to ask friends/relatives/colleagues or contact employers/HR managers directly; urban youth more often make or answer job advertisements in mass media (Tables 116 and 117 in Annex).

**Figure 3.15. Which methods did you use in the last 12 months to find a job or workplace?**

As to why job searches fail, the largest proportion (37.9%) say that they cannot find a job with suitable pay, while about 25.0% say they cannot find a job with suitable work conditions and about 23.7% they cannot get a suitable job in their locality (Figure 3.16). This last reason is given by rural youth at a rate of 36.1%, while 48.2% of urban youth cannot find a job with suitable pay (Table 118 in Annex).

**Figure 3.16. What are the reasons you cannot find a job or workplace?**

About 73% of unemployed respondents report not having looked for a job or workplace in the previous 12 months for various reasons. More than half (52.9%) are enrolled in an educational institution, 10.8% have family responsibilities (including maternity leave), and about 4.0% either plan to work abroad, looked for a job but did not find one, or do not know how and where to look for a job (Tables 119 and 120 in Annex).

Respondents interviewed in this group discussion mention discrimination against certain groups (persons with disabilities, Roma people, etc.) and noted the following employment and professional development challenges:

- lack of experience;
- low wages;
- nepotism and personal relationships in the workplace;
- lack of motivation based on parental financial support, particularly received from abroad;
- lack of support for young people in work collectives.

*I graduated as pastry chef, and I am a certified specialist, 4<sup>th</sup> degree. When I apply for a job, I am always asked, "What is your work experience?" and having a certificate does not help at all. (Male, 19, 4 FG: Ethnic minority young people, Russian speakers)*

*Nepotism spread out in Moldova. Without personal relationships, it is difficult to find a job. The country is small and people have relatives everywhere. (Male, 22, 1 FG: Young people with disabilities)*

*As a rule, young people are not supported by their older colleagues. Instead of helping with advice and sharing experience, they 'throw sand in the wheels'. (Male, 25, 1 FG: Young people with disabilities)*

*There are some young people who have no interest and rely only on parents' support. (Female, 21, 1 FG: Young people with disabilities)*

Young people often mention the lack of jobs. Even with job prospects, salaries are very low and young people are unable to provide themselves with a decent living standard.

*I went to Bălți to work as an actor for a theatre, even though I have a disability. Due to cerebral palsy, one of my legs is shorter than the other. I worked there for a half of a year, although I took a risk because of my leg. I didn't face any problem there. They accepted me. I was told, "You look very well. You move as an actor. You graduated as an actor. If you mentally forget about your disability, although it is observed when you walk, use your acting skills, and then you can walk. We had such actors, and they worked". Half a year later, I was forced to quit the job because of the salary. I couldn't provide myself with a decent life earning 2 500 leu. I tried to have a second job, but it was difficult because I had to be at the theatre all day due to rehearsals, performances. Now I am looking for a job. I can return to my previous work, but most young actors quit their job. (Male, 25, 1 FG: Young people with disabilities)*

Respondents note another obstacle to youth employment: employees at state pension age who do not want to retire. Young skilled employees are thereby forced to perform unskilled work instead.

*No one takes into account the fact that you graduated and were directed to start working, as it is made in European countries and even in Russia. In Moldova, you cannot find a job due to pensioners. They do not want to quit, and young people are jobless. (Male, 29, 4 FG: Ethnic minority young people, Russian speakers)*

*They get pension and also work and get salary. When a young person applies for a job, a pensioner says, "Don't hire him in my place. Young person has to look for a job in other place". Then a young person goes here and there, finds a job in construction, works a week, is paid 200 lei and is told, "You do not suit us." (Male, 29, 4 FG: Ethnic minority young people, Russian speakers)*

Young people with small children mention lack of kindergarten places as an obstacle to their employment. It is difficult to enrol children under 3 in preschool due to the scarcity of these facilities in many localities.

*I have a small child, and I don't have any source of income. I wanted to put him to kindergarten, but he was not accepted anywhere. I have no money to pay for kindergarten – in order to put my child there. Due to that, I cannot find a job. I was told that kindergarten could not help me with anything. It happened to me in my locality. (Female, 21, 3 FG: Young people from vulnerable/poor families)*

In addition to difficulties finding work, group discussion participants note that, once a young person has a job, he/she can face barriers to career advancement/promotion.

*The salary is small, and you can work for 8-10 years – taking into account that you studied for 4 years – and not have opportunity for career advancement, promotion. You continue to work as a nurse. I call it discrimination. Young people study and do not have a workplace. (Male, 22, 4 FG: Ethnic minority young people, Russian speakers)*

*If you are not my relative or friend, you will never get the position you try to get. You can work, make efforts, but without personal relationships, you will never be promoted (Female, 28, 4 FG: Ethnic minority young people, Russian speakers)*

### 3.4. Employment prospects

In general, young Moldovans want to work in the private sector (private companies, international companies, etc.) (response rate of 42.8%). Less attractive is the public sector, including education, health, public administration, military, police, etc. Another 20.0% express no opinion (Figure 3.17). About 50.0% of men, young people aged 25-29, those with a high education level and urban youth prefer to work in the private sector. Women and rural youth would like to work in NGOs at a higher rate than other groups (over 6%) (Table 121 in Annex).

**Figure 3.17. Whether or not you are currently working, in which of the following sectors would you like to work? (By gender and residence environment)**

In group discussion, young people close to graduating mention they want to find a job in the private sector. Graduate students with state scholarships are dissatisfied with the fact that they will be directed to work in state institutions, where salaries are much lower than in the private sector. Medical students and teaching students in particular express this frustration.

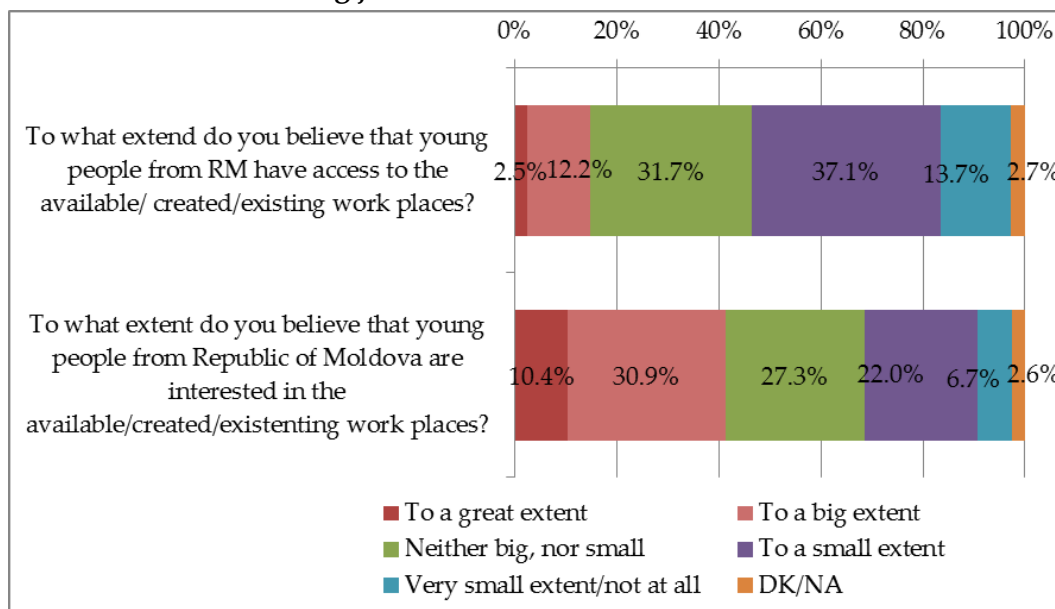

*Since my childhood, I wanted to be a nurse. It was my dream. I entered college, and recently I took my last graduation exam. Soon, I will get my diploma. I consider it as a discrimination that I cannot apply for a job in a private medical institution or abroad, as I have to work where I will be directed to pay money back to the state. My first salary will only 1 500 lei. How to live on such low salary?"* (Female, 21, 4 FG: Ethnic minority young people, Russian speakers)

*The same situation is in our [Philological] Department, when students enrolled on a full scholarship are directed to work in villages in order to pay money back to the state. You can escape it only if you go abroad or if you apply for a Master's degree – but not all want to do it – or you have to pay for studies."* (Female, 22, 4 FG: Ethnic minority young people, Russian speakers)

In terms of access to suitable jobs in Moldova, a significant proportion of interviewed young people (41.3%) are interested in accessing a job in the country; however, 14.7% of young people rate the extent of access to jobs in Moldova as very much/a lot, and over 50.0% rate it as a

little/very little/not at all (Figure 3.18). Young people are equally interested in finding jobs in their localities – just over 40.0% of respondents consider the extent of interest as very much/a lot in both urban and rural areas. Access to jobs is perceived differently along residence environment; about 44.6% of urban youth and 55.4% of rural youth evaluate extent of access as a little/very little/not at all (Tables 122 and 123 in Annex).

**Figure 3.18. To what extent do you believe young people have access to and are interested in available/created/existing jobs in the RM?**

### 3.5. Volunteering and internships

Volunteer activity is becoming more popular among young people in Moldova. About 18.0% of those interviewed had volunteered in the previous 12 months. Volunteering is more prevalent among the more educated: 21.0% of respondents with a high education level vs. 14.3% with a low level. Volunteering is more popular among urban than rural youth (23.3% vs. 14.1%) (Figure 3.19). The largest percentage of respondents who volunteer are those enrolled in educational institutions and young people aged 14-18 (30.0%) (Table 125 in Annex).

**Figure 3.19. Did you do any (unpaid) volunteer activity in the last 12 months? (By socio-economic status and residence environment)**

Group discussions confirm that volunteer activity is more popular and frequent in cities. Young people from rural areas have fewer opportunities due to lack of youth organisations or volunteer programming.

*There are no volunteer programmes in our locality. Maybe they are only in Chişinău. I didn't study. I stayed at home. I couldn't find a job and was forced to go to work in Turkey. (Female, 20, rural area, 4 FG: Ethnic minority young people, Russian speakers)*

*In Kahul, young people meet together and perform some activities. There are some organisations that designed curb ramps for people with disabilities. Some roads have not been repaired for a long time, so young people took pictures and showed them to local administration, and they won the case. There were a lot of homeless dogs in the town walking around and biting people. Young people collected signatures in support of opening a shelter for homeless dogs. They even found a sponsor. Volunteering works in our locality. (Male, 29, employed, 4 FG: Ethnic minority young people, Russian speakers)*

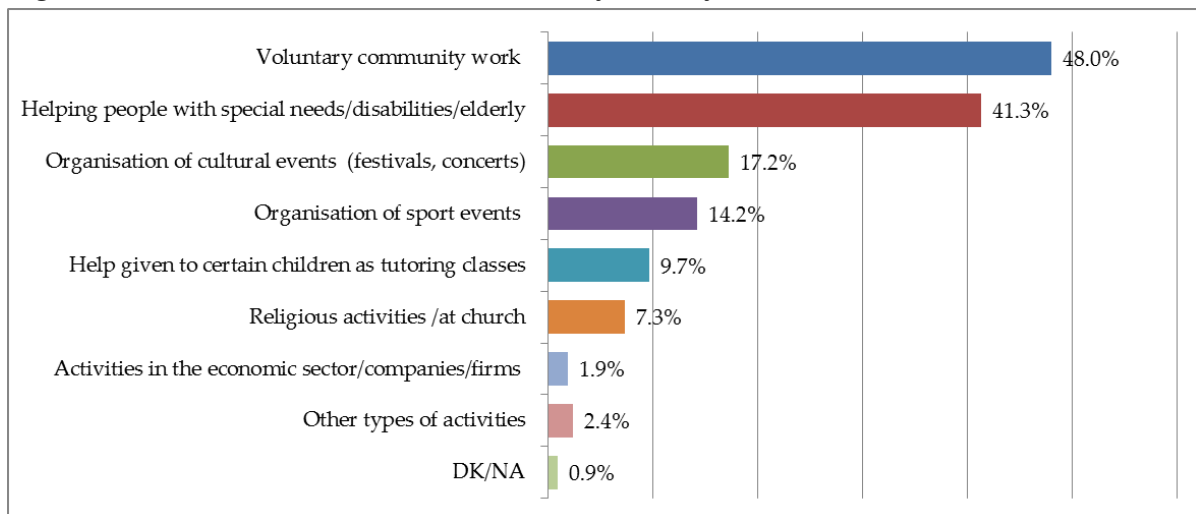

Group discussion participants are positive towards volunteering and often equate it with charitable activities and with young people who work for free or people who help people in need. They identify volunteer activities with both unpaid community service (e.g. sanitation, cleaning localities) and with information and promotion campaigns for certain causes, risks and ideas (notably those relating to the European Union, union with Romania, HIV/AIDS prevention, etc.). While appreciative of the volunteer activities carried out by young people in their localities, participants express anger when these activities are ascribed to certain political parties to enhance their public image.

The majority of respondents (93.5%) are very satisfied/satisfied with their volunteer activities. Young people with average socio-economic status and those aged 25-29 register the highest rates of dissatisfaction; 9.0% in each select dissatisfied/very dissatisfied (Table 126 in Annex).

*In Kahul, many young people join a volunteer organisation. They carry out different activities. On TV and mass media, is said that they belong to Democratic Party. On 8 of March, young people bought flowers, each at 5 lei, and congratulated every women. Everything was so beautiful, but at the end of the day, it was again said, "Youth from DP, the only party that congratulated women from Kahul." Just to boast. (Male, 29, employed, 4 FG: Ethnic minority young people, Russian speakers)*

The most common volunteering activities are community work (48.0% of responses), helping with special needs/disabilities/elderly (41.3%), organising cultural events, such as festivals and concerts (17.2%), and organising sporting events (14.2%). Volunteering in the economic sector accounts for only 1.9% of responses (Figure 3.20 and Table 127 in Annex).

**Figure 3.20. Which volunteer activities will you carry out in the next 12 months?**

Group discussions reveal that young people enrolled in educational institutions volunteer at higher rates because the setting is conducive to mobilising many young people. Volunteering is seen as voluntary for the population at large, whereas volunteering is considered obligatory at educational institutions, with certain constraints and pressures levied to involve students in these activities.

*In our lyceum [high school], there is a public and voluntary association, and several times per year, it organises the activity Clean City. Pupils clean city streets of garbage. The association also organises patriotic activities, such as Dawn of Remembrance, dedicated to veterans of World War II." (Female, 18, 4 FG: Ethnic minority young people, Russian speakers)*

*After that, I have a negative attitude towards volunteer work. It is always said, "We need ten volunteers, but obligatory." It was at school. Now when I hear that volunteers are needed, I have a negative attitude towards volunteer work, and I think if it is mandatory, I will not participate. That is the reality. (Male, 22, 1 FG: young people with disabilities)*

Internships also figure prominently in young people's lives. About 30.0% of respondents mention participating in internships: 27.5% within Moldova and 3.0% abroad. Women more than men undertake internships (33.5% vs. 27.0%), as do urban young people compared to rural (39.1% vs. 24.2%) (Figure 3.21). A large percentage (56.9%) of respondents with a high education

level participate in internships, followed by employed respondents (36.9%) (Table 124 in Annex).

**Figure 3.21. Have you ever participated (during or after your studies) in internships? (By gender and residence environment)**

Some discussion group participants consider internships organised by higher education institutions to be a formality “for a check mark.”

*I came to the internship three times. The first time was when I was introduced, the second time was when I needed stamp and signature, and the third time was when I brought cognac and chocolate. It was easy for me because I studied in college and got basic knowledge there, and when I entered at university, I already knew everything. (Male, 29, 4 FG: Ethnic minority young people, Russian speakers)*

Many young people also mention that they must pay private companies to intern in order to gain work experience or undertake an internship required at the end of their studies.

*Internship also has to be paid. If you want to perform internship in a good medical institution, then you have to pay. Probably, if you manifest yourself in a good way, maybe you can be offered a job with this institution. All is about money. (Male, 20, 4 FG: Ethnic minority young people, Russian speakers)*

### 3.6. Business development

Promotion of young entrepreneurship is important, but its impact on youth employment is not significant. Only a few respondents own their own businesses, while 25.0% intend to start a business in the next two years. The intention to start a business is more pronounced among men (30.9%) than women (20.6%). The proportion is also higher among urban youth than rural: 28.5% vs. 23.2% answer certainly yes or probably yes (Figure 3.22). In addition, entrepreneurial intent varies along education level: 35.3% among those with a high level vs. only 18.4% for those with a low level (Table 130 in Annex).

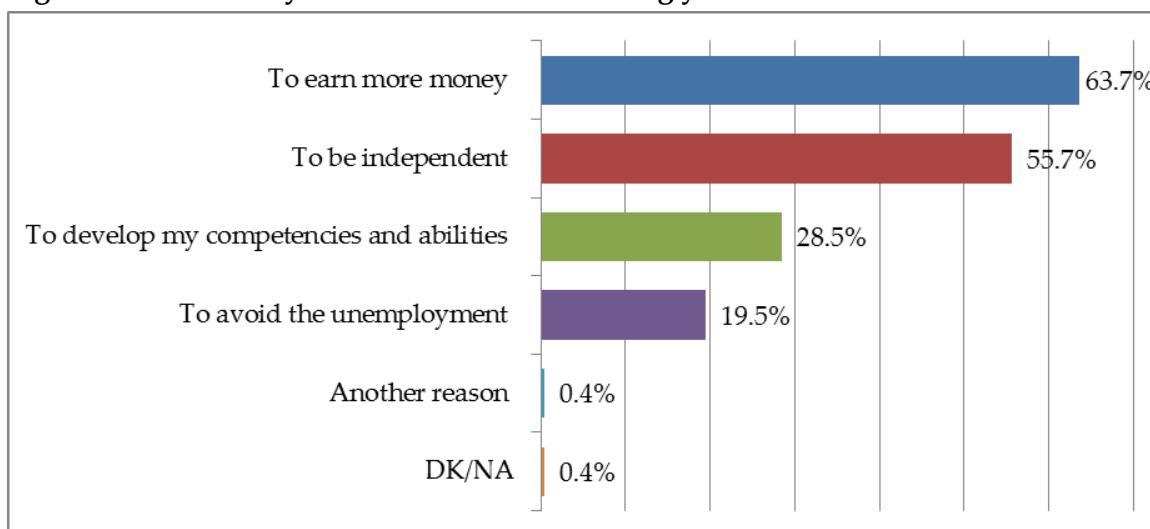

**Figure 3.22. Do you intend to start your own business in the next two years? (By gender and residence environment)**

The most cited reason for starting a business is income potential. About 63.7% of respondents give earning more money as their main reason, while 55.7% say being independent, 28.5% say developing skills and abilities, and 19.5% say avoiding unemployment (Figure 3.23).

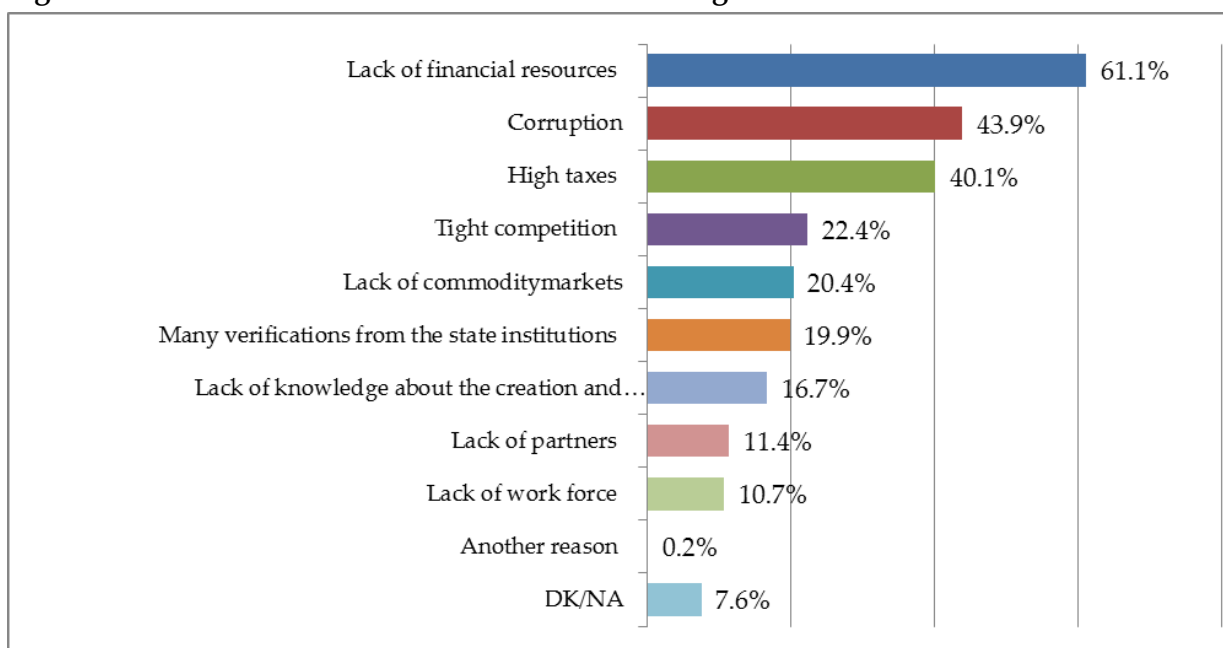

Among those motivated by income, more men than women (66.1% vs. 60.5%) and more married than unmarried respondents (66.9% vs. 60.6%) answer in the affirmative. A great proportion (77.7%) of respondents intending to start their own businesses in the next two years are housewives. Unemployed and unmarried respondents figure highest among those motivated by independence: 61.1% and 60.1%, respectively. Young people enrolled in educational institutions and those aged 14-18 figure highest among those motivated by developing their skills and abilities: 44.9% and X.X%, respectively (Table 131 in Annex).

**Figure 3.23. What is your main reason for starting your own business?**

Respondents mention a number of obstacles to launch a business. The most prevalent is lack of financial resources, selected by 61.1%. Over 40.0% select corruption and high taxes. Tight competition, lack of retail outlets and many verifications by the state each figure at about 20.0% response rate (Figure 3.24 and Tables 132 and 133 in Annex).

**Figure 3.24. What are the main obstacles in launching a business?**

A number of initiatives, business supports and business development programmes provide different services to encourage young entrepreneurs. Only an insignificant percentage (3.2%) of respondents claim to benefit from such services; those with a high education level figure most prominently among them (5.1%) (Table 134 in Annex). Services of greatest benefit are business start-up information and business start-up training courses (Table 135 in Annex).

Qualitative research confirms that young people are unaware of certain initiatives and programmes that could help them to start a business. Most available grants are confused with

donations from charities. Young people who are aware of such programmes still hesitate to start a business for several reasons in addition to the obstacles identified, namely: many procedures that require a lot of time and effort, lack of a viable business idea, and the lack of purchasing power of simple people.

*Well, it is possible to find a sponsor, but difficult. For example, you write a business plan, then you have to register it, and wait until you are accepted and can start up a business. There are very many nuances. (Female, 21, 1 FG: Young people with disabilities)*

*UN offers many programmes. First of all, they are not interesting for me, because you cannot start a business without having a platform. To start a business and then become bankrupt... I don't want it... To apply for a grant, you have to prove that your business plan is good, and you will not become bankrupt in half a year. You are not provided with money in order to continue your business. And lack of income leads to bankruptcy. (Male, 29, 1 FG: Young people with disabilities)*

*In Moldova, purchasing power is very low. There are a lot of businesses, but many of them become bankrupt due to the low level of purchasing power of consumers. It is very difficult. One has to have a successful business plan. You are provided with money, in order not to become bankrupt, on the basis of your business plan. (Male, 25, young people with disabilities)*

## 4. Health

### 4.1. Health services

Policies promoted by the state target health issues and youth development, but the major action taken by the government has been to create youth-friendly health services. The Ministry of Health (MoH) realised this initiative with support from the United Nations Children’s Fund, the World Health Organization and the Swiss Agency for Development and Cooperation. The first 12 youth-friendly health centres opened in 2003-05, providing teenagers and young people access to health care and counselling on healthy lifestyle, reproductive health and child care.

The efficiency of these centres has led to the MoH’s decision to expand the network. The Republic of Moldova (RM) opened 37 Youth Friendly Health Centers (YFHC) in all rayons and cities in the country. In the last four years, the number of beneficiaries increased almost four-fold, from 44 600 in 2011 to 173 000 in 2015.<sup>i</sup> Despite these successes, only 16.7% of interviewed young people have heard about YFHCs, with a prevalence of 20.5% for women, 12.3% for men, 20.0% for urban youth and 14.2% for rural youth (Figure 4.1). Young people enrolled in educational institutions exhibit relatively high awareness (Table 136 in Annex).

**Figure 4.1. Please answer yes if you have personal knowledge or have heard of YFHCs that offer various services for youth. (By gender and residence environment)**

Limited exposure to information may account for low awareness among young people. Information about YFHCs is predominantly disseminated by educational institutions, limiting awareness among groups with traditionally limited access to education, notably vulnerable youth, young people with disabilities and Roma people, who may abandon education early or do not attend at all.

Of respondents aware of YFHCs, 83.2% state they are located in the rayonal centre, 53.1% say in their resident localities, and 17.0% say in other rural localities in the rayon (Table 137 in Annex). Overall, 17.1% of aware young people benefit from (use) some YFHC services. Women benefit

more than men (19.9% vs. 11.7%), urban youth benefit more than rural (21.0% vs. 13.0%), and those with a high education level or with high socio-economic status benefit more than those without (Figure 4.2 and Table 138 in Annex).

**Figure 4.2. Have you benefited from or participated in any services or opportunities offered by a YFHC? (By gender, residence environment, education level and socio-economic status)**

Among the 81.2% who do not benefit from YFHC services, 71.3% have no need and 17.1% lack the time. All other options account for less than 5.0% (Figure 4.3 and Table 139 in Annex).

Group discussions highlight that YFHC services and activities are predominantly offered during campaigns to prevent certain risks (alcohol abuse, HIV/AIDS) and are conducted 1) as initiatives instigated by the centres; or 2) at the request of educational institutions or local public administration as a further intervention in a crisis situation.

*When I studied at the lyceum [high school], we had some visitors from the district centre. They told us about youth centre where we could receive psychological consultation. A girl from our locality committed suicide, and that is why they came to tell us about the centre. (Female, 16, enrolled in an educational institution, 2 FG: Young women from rural areas)*

**Figure 4.3. What are the main reasons you have not benefited from the services of a YFHC?**

Most respondents who have benefited from YFHC services rate them as very good/good. Most appreciated are staff behaviour towards youth clients (96.3%), maintenance waiting period (94.6%), staff qualification (94.6%) and cost of services (73.1%) (Figure 4.4 and Tables 140 and 142 in Annex).

**Figure 4.4. How would you rate the following aspects of the YFHC?**

## 4.2. Health status and medical services

Asked about their health in the previous 12 months, more than half (52.3%) of respondents declare that they were not sick/were healthy, 37.3% state they occasionally felt sick/felt unwell, and about 9.0% state they often felt sick/felt ill or that they were always sick/felt very ill. More young men than women report feeling healthy (64.0% vs. 42.2%) (Figure 4.5). Perception of health also varies by age. Respondents aged 14-18 declare themselves healthy at a higher rate than those aged 25-29 (56.4% vs. 40.9%). Respondents with a low education level declare themselves healthy at a higher rate than those with a high education level (55.7% vs. 46.6%) (Table 143 in Annex).

**Figure 4.5. How would you describe your health over the previous 12 months? (By gender)**

Use of medical services is low among young people. About 20.0% did not visit a family doctor in the previous 12 months, and about 60.0% rarely or very rarely did. Women visited a family doctor more than men; 30.0% of men had not visited a doctor vs. 12.6% of women (Figure 4.6 and Table 144 in Annex).

**Figure 4.6. How often did you go to a family doctor with a health issue in the previous 12 months? (By gender)**

Asked when they go to a doctor, the largest proportion of respondents say that they have a health exam once a year (21.0%) or go only if they observe a deterioration in health (21.0%). The next most prevalent answers are going for the slightest health problem (19.3%), only in an emergency (14.4%), only for a serious health problem (11.9%) and never going (11.0%) (Table 145 in Annex).

A high percentage (47.3%) had visited a family doctor within the previous six months. The proportion of women is higher than men (58.6% vs. 34.7%). About 20.0% had visited 7-12 months ago, and 33.3% had rarely or never visited (Figure 4.7 and Table 146 in Annex).

**Figure 4.7. When was the last time you visited a family doctor? (By gender)**

As to reasons, about 46.4% of respondents visited a family doctor due to signs or symptoms of disease, 18.5% for a medical certificate, 10.6% for a specialist referral, and 6.4% for vaccination. Other reasons account for less than 5.0% of responses (Figure 4.8 and Table 147 in Annex).

**Figure 4.8. What was the purpose of your most recent visit to a family doctor?**

The majority (80.0%) of respondents rate the attitude of medical staff towards them during their last visit as very good/good. The smallest proportion of positive responses (63.1%) and the largest proportion of negative responses (15.3%) rate staff attitudes as bad/very bad in hospital (Figure 4.9). Young people aged 25-29 and unemployed youth account for the greatest proportion of negative reviews (Table 149 in Annex).

**Figure 4.9. What was the attitude of staff towards you during your last visit to a health care provider?**

In group discussion, young people express dissatisfaction with the attitude of medical staff towards patients. They perceive in particular indifference towards patients' problems. Thus, respondents who live close to the security zone prefer to receive treatment on the left side of the Nistru River, where staff attitude is believed to be better.

*In Căușeni, if you do not schedule an appointment with the doctor, you can die in front of the doctor's door. No one cares of you. I studied in Bender and, while I was pregnant, I tried to stay there. There, medical staff cares about you: I never had problems. (Female, 26, 3 FG: Young people from vulnerable/poor families)*

*Some doctors are kind, and diagnose you correctly, but others just say a few words to you and send you home without explaining the methods of treatment – just prescribe you some medicines and send you home. (Female, 18, 5 FG: Roma young people)*

Some respondents believe health care providers are interested and care only towards patients who get in to see them via personal relationships or who pay for medical services.

*Everything is done through personal relationships or money. Due to lack of personal relationships, money, recommendations, no one will care for you, despite your heavy health condition. Health condition doesn't matter, but understanding and money. (Male, 29, 1 FG: Young people with disabilities)*

*Once I had a surgery and was asked for money. I didn't give them money, although they insisted. The next, I left for home. (Male, 20, 3 FG: Young people from vulnerable/poor families)*

Roma youth detect a bias against Roma people. Some believe Roma patients are charged more for services provided.

*Doctors are annoyed at us and express negative attitude towards us. They believe that we have a lot of money, but the Moldovans also have money. There are rich and poor people among Romani people, as well as among the Moldovans. Doctors set enmity between us. (Female, 18, 5 FG: Roma young people)*

The most frequent health problems experienced by young people in the previous 12 months are respiratory problems (22.5%), while about 7.0% concern infection, digestion, trauma, the nervous system, and eyes and ears. Other problems account for less than 5.0% of responses (Figure 4.10 and Tables 150 and 151 in Annex).

**Figure 4.10. What type of health problems did you have in the previous 12 months?**

Ten percent of young person have a chronic disease (Table 152 in Annex), most frequently a gastrointestinal disease/digestive disorder (19.7%), kidney disease (16.5%), respiratory disease (15.4%) or neurological disease (14.0%) (Table 153 in Annex).

For 56.2% of respondents, the main obstacle to medical assistance is lack of money. About 33.3% mention the necessity of getting a referral from a family doctor, 29.2% mention lack of time, 28.0% mention lack of health insurance or distrust of medical staff, and 18.5% mention remoteness from medical institutions (Figure 4.11 and Table 155 in Annex).

**Figure 4.11. What are the main obstacles to receiving medical assistance when needed?**

Limited finances may mean some young people cannot afford to follow the treatment prescribed. This is also the case when their children get sick. Whether they follow treatment or not depends on the severity of the problem. Usually, they substitute expensive medicines with cheaper ones and tend to avoid medicines considered strong.

*The family doctor quickly examined my child and recommended taking some medicines. Good if I have them at home; otherwise, I try to buy them. If it is bronchitis, then we need antibiotics. If it is something easier, then we treat it with medicines we have. (Female, 26, 3 FG: Young people from vulnerable/poor families)*

*When my child was one year old, he had a sore throat. Doctor prescribed a list of medicines that I had to buy. They cost all together 500 lei. I gave up and went home to treat my child the way I knew. It cost me 40 lei. If that person is a doctor, why does he prescribe so many medicines? Antibiotics is a very strong medicine for a small child. (Female, 21, 3 FG: Young people from vulnerable/poor families)*

The degree of satisfaction with the quality of medical services provided to young people is relatively low. Just over half of respondents (55.9%) answer very satisfied/satisfied, with more positive responses (66.3%) among young people enrolled in educational institutions (Table 156 in Annex).

Respondents tend to think health insurance is useless for young people, as well as for other people. Some say medical staffs themselves remind them it is uselessness. Some young people prefer to get treatment in private institutions, where they perceive services to be higher quality compared to state institutions. Young people with disabilities state they do not benefit from services covered by health insurance; they are forced to pay for medical consultations and to completely cover the cost of prescriptions.

*You cannot benefit from health insurance. Once I got to the hospital, and I had my health insurance.*

*But I was told, "When you go to the toilet, don't forget to take with you your health insurance." I speak honestly. I took my health insurance and went to the private hospital. I thought that I'd better pay money there, but I will be properly examined. I work and pay for health insurance but never benefited from it. I tried once to use it and was told... (Male, 29, employed, 4 FG: Ethnic minority young people, Russian speakers)*

*I'd better go to the private medical institution, pay 100 to 200 lei for consultation, but I know that I will be provided with high-level services instead of wasting two hours in the state medical institution. (Female, 28, employed, 4 FG: Ethnic minority young people, Russian speakers)*

*Even if you have health insurance – it is granted to older and sick people – you should pay anyway. Medical services have to be provided for free on the basis of health insurance, but you are always asked for money. (Female, 18, 5 FG: Roma young people)*

*Why do we use health insurance for? Why do we pay for it? To get some discount on medications? But we pay the same price when we go to the pharmacy. We also pay for medical consultation. (Female, 21, 1 FG: Young people with disabilities)*

Employed young people are dissatisfied to a greater extent with health insurance. Thus, some of them refuse to pay for it.

*I'd decline from health insurance in order not to pay for it, because it's a waste of money. It'd be good if it'd be possible to refuse from it." (Female, 28, employed, 4 FG: Ethnic minority young people, Russian speakers)*

Young people also express dissatisfaction with having to waste time in line at the doctor's. Appointments are not effective. Young people with disabilities mention that they have no priority in line.

*You can stay in line for two hours even if you have appointment at 10:00 and now it is almost 12:00. Then someone who is more bold comes and says, "I have an appointment with the doctor at 12:00, and now it's my turn. (Male, 22, 1 FG: Young people with disabilities)*

*In medical institutions, persons with disabilities stay first in line. And in the case of very small children, then they stay first in line. Sometimes they say, "We stayed in line." Yes, but they have to understand that there are some people with heavy health conditions. Sometimes I offer my place in line for a person with a heavier health condition than my health condition. (Female, 21, 1 FG: Young people with disabilities)*

### **4.3. Health risk factors**

Several societal risk factors persist for young people, namely smoking, alcohol and drugs. Of those interviewed, 23.7% smoke – either daily (16.5%) or occasionally (7.2%) – 61.8% had consumed alcohol in the previous 12 months, and 3.3% have tried smoking marijuana or hashish. A few mention injection drug use, more frequently men than women, and the proportion of users is much higher among city youth than village youth (Figure 4.12). These consumption risks increase with age. The greatest proportion of young users of these substances is aged 25-29; a lesser percentage is aged 14-18. A higher rate of employed young people also state using them compared to other occupational groups (Tables 157, 159 and 162 in Annex).

**Figure 4.12. Share of young respondents at a risk due to smoking, alcohol and drugs (by gender and residence environment)**

In group discussions, young people confirm excessive alcohol consumption and a high prevalence of smoking among them. They mention the significant role played by the kinds of friends you have. They also note non-compliance with legislation on selling alcohol and tobacco to young people. They admit having had access from childhood; family members send them to buy these products, and most shops sell them without restriction.

*When you go to the supermarket, you can be asked if you reached 18, but in small shops, tobacco products and alcoholic beverages are sold to minors. (Female, 19, enrolled in educational institution, 2 FG: Young women from rural areas)*

*My brother has a classmate aged 14 who smokes and doesn't face any problems when buying cigarettes, although he doesn't have gather and grandfather. (Female, 19, lyceum graduate, 2 FG: Young women from rural areas)*

Roma young people mention consuming alcohol as of age 15-18. They report children in their families consume alcohol, while noting that it is the exception rather than the norm.

*I started to consume alcohol at the age of 15, but I have never got drunk. (Male, 16, 5 FG: Roma young people)*

*Young people usually start to consume alcohol at the age of 16-18. I started to consume at the age of 14-15. (Female, 18, 5 FG: Roma young people)*

*My nephew is only 9. He saves money and buys beer together with his friends. They think it is normal. (Female, 18, 5 FG: Roma young people)*

Young people with family who consume alcohol and do not suffer related diseases have a higher alcohol tolerance than those whose family members/relatives died or have health problems due to over-consumption. They generally perceive alcoholism as a problem for young people and society.

*My father consumes alcohol and does not have any problems. He has been consuming since he was 12.* (Female, 18, 5 FG: Roma young people)

*My grandfather consumes much alcohol and is still healthy, but some young people drink alcohol and have problems with liver and usually die.”* (Female, 18, 5 FG: Roma young people)

Some Roma young people note that different drugs are sold in their localities and are accessible to young people, both in terms of territory and price. They do not deny that some Roma young people consume drugs. “Not all people use drugs, but there are some of Roma people who use drugs, including even girls.”

#### 4.4. Sexual education and risks

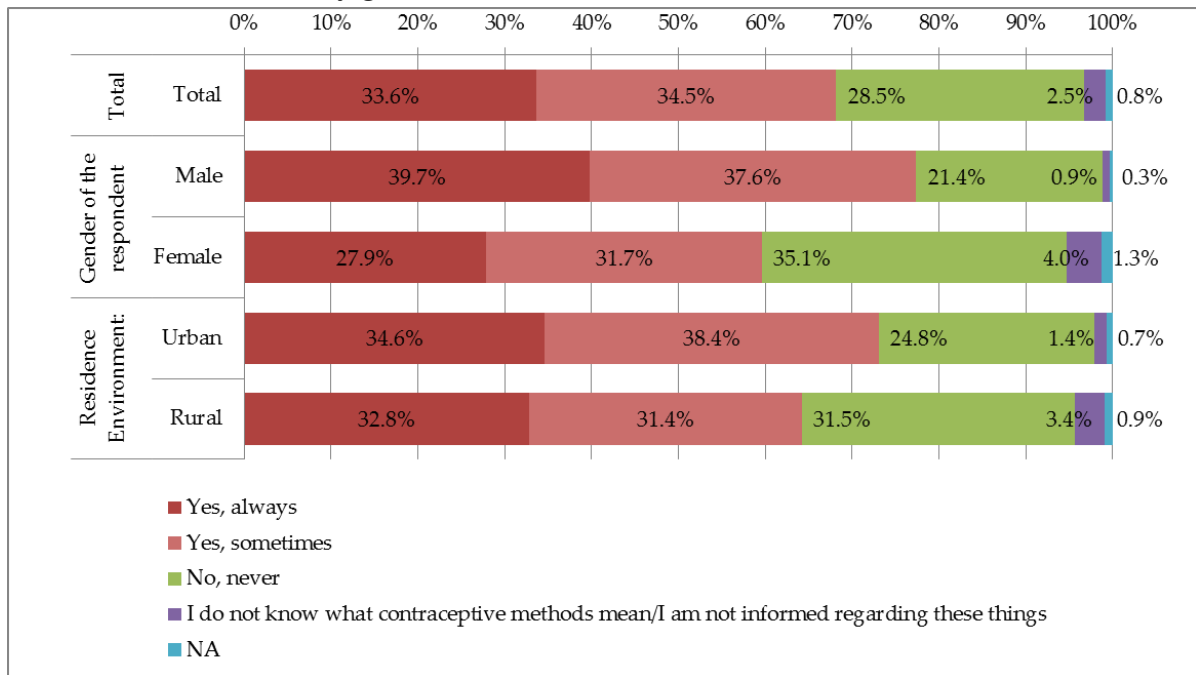

Sexual activity starts at an early age. Among interviewed young people, 23.1% have never had sexual relations, 45.5% have with one partner, and 25.0% have with more than one partner. Men report having relations with more than one partner more frequently than women (43.9% vs. 8.6%). Respondents aged 14-18 engage in sexual relations, including with more than one partner, at a rate of 20.0%. This rate increases significantly with age (Figure 4.13 and Table 167 in Annex).

**Figure 4.13. Which statement best describes your sexual relations activity? (By age group and gender)**

The majority of young people know about and use contraceptives; about 68.0% claim to use different methods always/sometimes. More men than women claim to use contraceptives (77.3% vs. 59.6%), as do more urban youth than rural (73.0% vs. 64.2%) (Figure 4.14). Young people aged 14-18 report higher contraceptive use than other age groups (Table 165 in Annex).

**Figure 4.14. Do you use any contraceptive method (condom, contraceptive pill, calendar method, sterilet, etc.)? (By gender and residence environment)**

Responses split regarding sexual abstinence. About 25.0% of respondents consider abstinence a value or virtue pertaining to both men and women. Another 25.0% consider abstinence a value or virtue pertaining more to women. Only a few respondents consider it relevant to or pertaining to men. These opinions are held by more women than men. About 15.0% of respondents consider abstinence a burden or cause of psychological distress; another 14.4% consider abstinence obsolete. These opinions are held by more men than women (Table 169 in Annex).

More young people support prohibiting or restricting abortions. Over 25.0% think abortions should be prohibited by law, while 50.0% think they should be allowed only in emergency cases or when the mother's life is in danger. About 15.0% think abortions should be allowed by law, as they are currently. A slightly greater number of men than women think abortions should be prohibited (29.0% vs. 24.5%) (Table 171 in Annex).

## 5. Education

### 5.1. Educational status and studies

About 37.0% of respondents are enrolled in educational institutions: 23.3% in schools, lyceums (high schools) and vocational schools; 10.5% in undergraduate courses; and 3.2% in Master’s and doctoral degree programmes (Table 76 in Annex). The majority are satisfied with their education. Some 44.0% attend with enthusiasm, and 39.1% attend sometimes with enthusiasm. Only 16.0% attend without enthusiasm. Women are more enthusiastic about their studies than men (46.2% vs. 41.5%) and rural youth more than urban youth (48.5% vs. 38.2%) (Table 77 in Annex).

Young people also differ in their perception of the difficulty and stress of studies. Only 28.5% consider being a student very easy/somewhat easy, and 34.2% consider it somewhat stress-free/very stress-free. About 20.0% find being a student very hard/hard and very stressful/stressful (Figure 5.1 and Tables 78 and 79 in Annex).

**Figure 5.1. How difficult and stressful do you find your studies?**

The grade point average (GPA) of respondents at the end of the school year is 8.1, where 8.0 is “average.” Half of respondents have a GPA above 8.0; the lowest is 4.9; the highest is 10.0 (Table 80 in Annex).

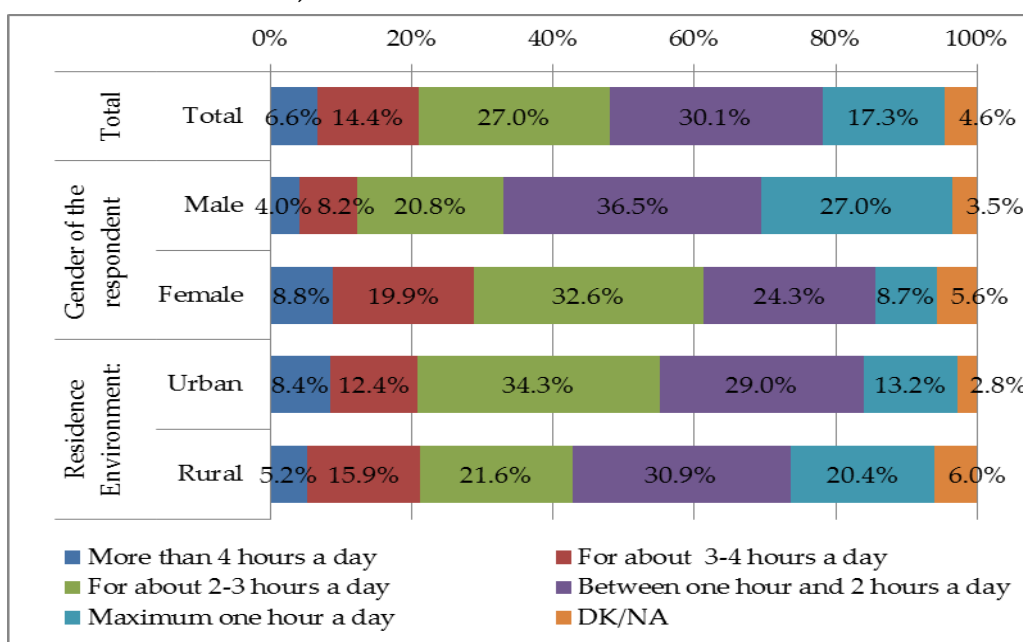

The research reveals that informal payments for educational outcomes persist in the education system. Nearly half (46.2%) of respondents declare students often or sometimes get better grades with small payments, only slightly more so among urban young people (48.8%) than rural (44.1%) (Figure 5.2). Employed young people and those aged 24-29 report such payments with a higher frequency: 62.8% and 59.7%, respectively (Table 81 in Annex).

**Figure 5.2. Can higher grades be obtained with payment at your educational institution? (By residence environment)**

In terms of study habits, 21.0% of respondents devote three hours or more per day to study outside of class time, while 17.3% devote a maximum of one hour. Women who devote over three hours stands at 28.7% vs. 12.2% for men. Urban young people devote more hours than rural: 55.1% devote more than two hours daily vs. 42.7% for rural areas (Figure 5.3 and Table 82 in Annex).

**Figure 5.3. How many hours per day do you study outside of class time? (By gender and resident environment)**

Roma young people display certain distinctions in terms of education. Of seven group discussion participants aged 14-18, only one is enrolled in a lyceum. Some have never attended school, while some quit after five to seven years. The research reveals a few reasons for non-attendance among Roma youth, namely migration, traditions, personal or parental opposition, and discrimination in educational institutions.

*First time, I started school at the age of 12 and undertook only 4 years of schooling, because we permanently migrate from one place to another, the whole my life. Despite not finishing my studies, I would like to learn a profession. (Female, 18, 5 FG: Roma young people)*

*I undertook only one year of schooling. We permanently migrate – do not stay long at the same place. (Female, 18, 5 FG: Roma young people)*

*I started school at the age of seven and overtook five years of schooling... because my mom said that I was not allowed to continue attending school due to Romani traditions. (Female, 14, 5 FG: Roma young people)*

*When I was six, I wanted to go to school, but my parents didn't allow me to attend school. (Female, 18, 5 FG: Roma young people)*

*I wanted to study, but my mom didn't allow me. She didn't believe that I could study and be clever. She doubted it. She didn't want to waste money on education." (Female, 18, 5 FG: Roma young people)*

*From my own experience, Romani children are isolated. All avoid Romani people. My brother studied at school, and children avoid him. It is discrimination. Due to this reason, some Romani people do not attend schools. We are always being bullied, but we are also human beings. (Female, 18, 5 FG: Roma young people)*

As a rule, Roma parents decide whether their children attend school, without consideration to children's opinions. Children's education is not a priority, and parents tend to insist that children obtain trade skills. Parents also decide when children stop attending school, often once they can read, write and count.

*When I was 14 to 15, I joined my father for work. Traditionally, Romani people do not go to school. They learn how to trade. (Male, 16, 5 FG: Roma young people)*

*It's our life. If you undertake two years of schooling and can read and write, then it's enough. The same situation is all around. Only some Romani people graduate from school and even work in Chişinău." (Female, 18, 5 FG: Roma young people)*

Roma children typically start school at a later age. The age difference with classmates can make them lose interest in studies and abandon school. Others mention that migration to other countries forces them to repeat grades due to differences in curriculum.

*I undertook two years of schooling. I studied in three different cities and countries. I graduated first grade in Kazakhstan, second grade in Russia and, in Moldova, I repeated first grade because, in Russia, in second grade, we learned the same themes as in first grade. (Male, 16, 5 FG: Roma young people)*

Post-educational employment opportunities are a problem for young Moldovan. Only 29.8% of respondents believe they will find a job immediately after graduation, 39.4% believe they will find a job sometime after graduation, and 19.7% do not believe they will find a job after graduation. About 35.0% of urban young people believe they will find a job immediately vs. 26.0% of rural youth (Table 83 in Annex).

All respondents, including those not enrolled in educational institutions, were asked if they had done any tutoring or training courses in the previous 12 months. The majority (76.5%) answer no, while an insignificant proportion (less than 6.0%) answer yes. Among these, 5.5% had taken foreign language tutoring or courses, 4.8% had had driving instruction, and 4.4% had done workshops and training (Tables 84 and 85 in Annex).

Qualitative data confirm these trends. Young people are most interested in studying foreign languages (mostly English) by attending courses. They are also interested in driving schools, along with courses in cooking, hairdressing or barbering, and tailoring. Some hope to make these their profession. Others simply consider them very useful in life and family life.

*I will attend cooking and tailoring courses because I will need these skills in my life, i.e. when I get married. They are not related to my profession, but they are necessary and useful. (Female, 19, enrolled in an educational institution, 2 FG: Young women from rural areas)*

Some young people maintain that basic education did not help them find a job in their speciality, but they can make a living from skills acquired in courses. Others are sceptical towards courses or training. They maintain that nowadays, young people attend many courses but cannot find a job at the end.

*I cannot make a living with my speciality. I have already learned nail technician and hairdressing, and that helps me to make a living. But I cannot find a job in my speciality. I addressed the employment office and was told that I can find a job only at factory Viorica. My brother said that I studied for four years in vain. I was pregnant and worked as a nail technician. (Female, 21, 3 FG: Young people from vulnerable/poor families)*

*A lot of courses, a lot of training– for example, a person has graduated from a course, paid some amount of money for it. In some ways, it is a small business in Moldova. People received money, but the person cannot find a job. He has knowledge but lacks practical experience. It looks like a waste of money. (Female, 28, 4 FG: Ethnic minority young people, Russian speakers)*

## **5.2. Continuing education**

Only 51.3% of young people intend to continue with further studies. Those aged 14-18 answer positive in greatest number (80.6%), followed by ages 19-24 (50.6%) and 25-29 (33.5%). Women intend to continue studying in greater numbers than men (59.2% vs. 42.5%) (Figure 5.4). Married respondents intend to continue with studies in greater numbers than unmarried (62.1% vs. only 39.0%) (Table 86 in Annex).

**Figure 5.4. Please answer yes if you would like to continue your education. (By age group and gender)**

Among respondents intending to continue studies, about 41.4% aim for undergraduate studies at university, while 20.5% aim to undertake a postgraduate degree and about 11.0% to study at a college or vocational school. Ambitions for continued education vary along education level (Figure 5.5 and Table 87 in Annex).

**Figure 5.5. What studies would you like to pursue/continue at what educational institution?**

Reasons for not continuing education include no interest in additional studies (59.7%), the high cost of contracts (13.8%), and low academic achievement (GPA too low for admission or failing an exam or high school Baccalaureate [bac] exams) (Table 88 in Annex). Some discussion group participants who are enrolled in higher educational institutions intend to abandon studies for migration, citing financial difficulties and lack of future prospects.

*I am a student at a technical university – air conditioning speciality. I think that if I graduate from the university here, I will not be able to find a job. The salary of 4 000-5 000 lei is very low for living in Chişinău. If you have a child, you need to rent an apartment. It is very difficult. I want to apply for a Romanian passport and to immigrate. I won't wait to finish my studies. I can take an academic leave and continue after I am back to the country. (Male, 20, 3 FG: Young people from vulnerable/poor families)*

Young people interviewed in group discussions note they would like the Republic of Moldova (RM) to follow the example of other countries regarding facilities for students. Young people also lack career guidance. Very often, they do not know how to proceed after completing a course of study and would benefit from a career assessment test to determine area of activity. Some support stronger relationships between educational institutions and potential employers, and more opportunities for employers and students to interact via visits, internship information, common activities, etc.

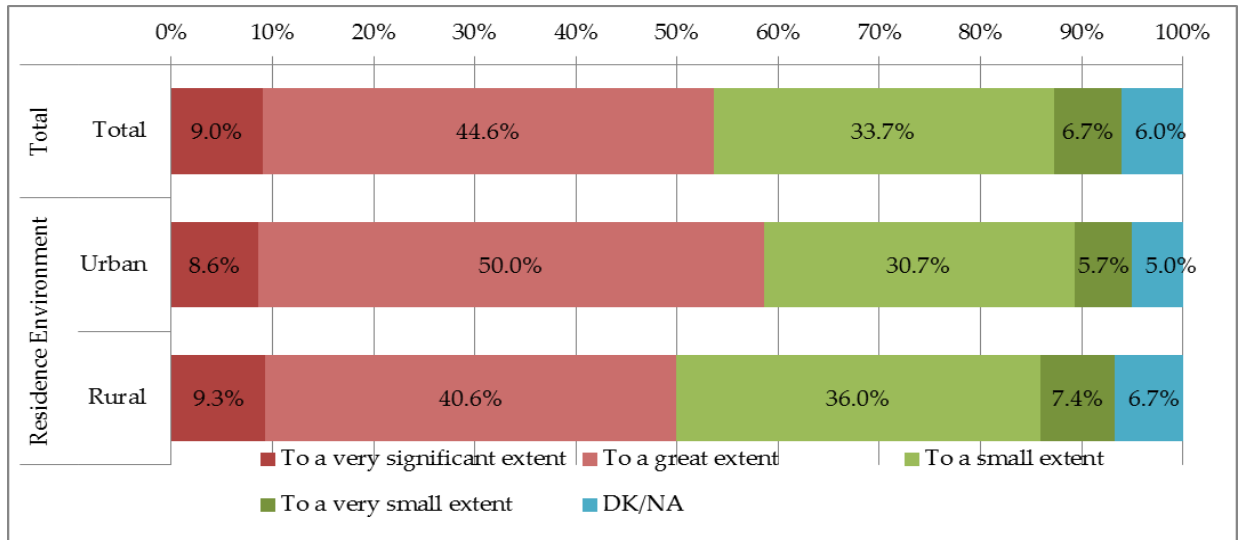

*In other countries, students are provided with one or two weeks of internship in different domains. Thus, it is easier for young people to determine their future profession.” (Female, 16, high school student, 2 FG: Young women from rural areas)*

*For example, a nanny in kindergarten is allowed to work for two weeks and then to decide if she likes the job and wants to work in the domain. It is a kind of professional suitability test.” (Female, 19, lyceum graduate, 2 FG: Young women from rural areas)*

### **5.3. Access to education and quality of education**

Over half (53.6%) of respondents feel they have access to educational institutions in the RM, especially those with a high education level, high socio-economic status and young people enrolled in educational institutions (65.0% affirmative responses in each category) (Table 92 in Annex). More urban youth feel they have access to education than rural youth (58.6% vs. 49.9%) (Figure 5.6).

**Figure 5.6. To what extent do young people like you have access to educational institutions in the RM? (By resident environment)**

Young people interviewed focus on two aspects of access to education: territorial access to studies at a lyceum and prohibitive tuition fees. In many rural areas, educational institutions do not have the lyceum cycle, and several young people note that closing lyceums in rural areas limits the chances of children from vulnerable families of continuing studies. Others, however, note that those youths are oriented towards colleges and vocational schools and are interested in learning a profession, especially if they know they will not pass the bac exams. The opportunity for higher quality education leads some young people to choose urban lyceums, despite having institutions in their localities.

*The lyceum in our locality was closed due to lack of pupils. Young people focus on colleges or vocational schools because if they do not pass bac exams, they have a profession. (Female, 16, 2 FG: Young women from rural areas)*

*There is a lyceum in my village, but I decided to move to Bălți, because there are more opportunities in the city. (Female, 16, 2 FG: Young women from rural areas)*

Most young people interviewed in group discussions cite financial barriers to continuing education in their chosen field.

*There are eight children in my family, and everyone works. I was enrolled in grade ten with difficulties. I was asked for money, but we didn't have money. My classroom teacher helped me to go into grade ten, and now many teachers tell me that I will not pass the bac exams, although I study not bad. They tell me every time that I will not graduate from lyceum. They all want money. (Female, 18, 3 FG: Young people from vulnerable/poor families)*

*I couldn't enter the police academy because the tuition fee is 7 000 to 8 000 lei. (Female, 21, 3 FG: Young people from vulnerable/poor families)*

*Vocational school chef... My parents made me study cooking. I didn't want to because I don't like it but, because of lack of money, I was forced to agree with my parents and study cooking. I wanted to be a hairdresser, and now I don't work as a chef" (Female, 25, 3 FG: Young people from vulnerable/poor families)*

Young people with disabilities face barriers from educational institutions claiming not to be adapted to accommodate their continued studies. Others face prejudice against continued education from their own families.

*When I graduated from grade nine, my mom said to me, "You will stay at home!", but I insisted that I wanted to continue studies. I wanted to be a teacher of music, but it was too far from my locality, and I could come home only once in a half year. But I didn't want to stay home and started to study in the telecommunications field. From the beginning, it was very difficult. I was told that I wouldn't manage to study there. We were four girls. We addressed the Ministry of Education and complained that we were not admitted into the faculty. We were supported by the ministry. I have graduated, but now I do not work. The disability living allowance is not enough for living. (Female, 21, 1 FG: Young people with disabilities)*

Young Russian speakers may not continue studies in their chosen field due to language barriers and inability to speak the official language. In respondents' opinion, the state does not provide sufficient full-time scholarships for Russian speakers, thereby forcing them to study in Romanian groups or to choose another field in which they have a chance of getting a full-time scholarship.

*I submitted my documents to university in Chişinău. My grade point average was very high, but I did not get full-time scholarship. In Romanian groups, students were admitted with much lower grade points. (Female, 20, 4 FG: Ethnic minority young people, Russian speakers)*

*Russian speakers face discrimination. I could not enter the Department of Journalism and was forced to enter the Department of Philology. I didn't want to pay for studies because, at school, I was among the best students. (Female, 22, 4 FG: Ethnic minority young people, Russian speakers)*

Some respondents from ethnic minority groups believe the state creates obstacles to children studying in Russian. They observe a reduction of places for Russian speakers in all educational institutions, at all levels, starting from kindergarten.

*I have friends with children that face problems due to their Russian language. They are forced to send their children to Moldovan groups because there are only ten Russian-speaking children. The same situation is at schools. Although there are Russian schools, parents think about the future of their children. There is no future in Moldova for Russian-speaking children. When sent to Moldavian kindergarten or schools, children face difficulties during their first one to three years. (Male, 29, 4 FG: Ethnic minority young people, Russian speakers)*

Some young people choose to go to Romanian language educational institutions as of secondary school because it allows them to continue tertiary studies more easily, go into their desired profession and have greater options when applying for jobs.

*I studied in a Russian school, and then I transferred to a Moldavian school to be able to enter college, university, get a Master's degree. There are no such possibilities for Russian speakers compared to Moldavian speakers. I learned the language and entered the faculty that I wanted. If I didn't transfer to Moldavian school, then I wouldn't have these possibilities. (Male, 29, 4 FG: Ethnic Minority young people, Russian speakers)*

Some young people interviewed work while they continue studying to meet minimum basic living needs. Others from vulnerable/poor families state they did not have a chance to continue their studies due to difficult family situations: financial problems, a large family, alcohol abuse. "My father drank alcohol, and I had to help my mom."

A host of variables influence the choice of a study area : 1) example of relatives (parents, aunts and uncles); 2) desire to learn a particular profession; 3) influence and assistance of friends and the Internet; 4) prospect of increased status; 5) ambition for higher education after graduating from vocational school or college; and 6) availability of jobs in the field.

*I want to learn nursing because my mom is working as a nurse in our village... and I can find a job there. My mom will cede her workplace to me when she retires."* (Female, 18, enrolled in an educational institution, 2 FG: Young women from rural areas)

Only 30.0% of respondents are satisfied with the quality of education in the RM. Another 30.0% are dissatisfied/very dissatisfied. Urban young people are more dissatisfied than rural (37.3% vs. 24.2%) (Figure 5.7). Young people enrolled in educational institutions demonstrate a pronounced degree of satisfaction: about 41.0% (Table 93 in Annex).

**Figure 5.7. How satisfied are you with the quality of the education system in the RM? (By residence environment)**

Young people interviewed in group discussions note that some subjects learned at school are helpful in the future. "If I plan to learn languages, why do I need physics?" Only 35.0% of respondents think studies in the RM prepare people to find a job or perform their jobs better, while over 60.0% think they do so very little or not at all. Fewer respondents (over 25%) think they prepare people to start a business (Figure 5.8 and Tables 94 and 95 in Annex).

**Figure 5.8. To what extent do studies in the RM prepare people for future pursuits?**

Young people interviewed in group discussions see the level of higher education studies in the RM as lower than in neighbouring and European Union countries and the Russian Federation. Moreover, they see continuing studies outside the country as an opportunity to find a job in future.

## 6. Migration

Most respondents (76.4%) know at least one close person (family member, relative, friend, acquaintance) who works abroad. Among these, 20.0% have a mother abroad, 15.8% a father, 22.6% a sibling(s) and 56.9% a relative(s) (Figure 6.1). A greater number of rural youth are in this circumstance than urban youth (Table 172 in Annex).

**Figure 6.1. Who do you know who works abroad?**

A fraction (about 20.0%) of persons interviewed intends to go abroad to work. These include 12.8% intending to go in the next six months and 8.5% intending to go within the next year. About 15.0% intend to visit relatives abroad, whether or not they have done so previously, while about 27.0% intend to go on vacation, 18.3% having done so previously and 8.9% having never done so before but will in the next six months. Only about 7.0% intend to go abroad to study (Figure 6.2 and Tables 173 and 174 in Annex).

**Figure 6.2. Do you intend to go abroad and when? For what purpose have you gone abroad in the previous two years?**

The main reason young people give for having gone or intending to go abroad is to improve their standard of living (79.1%). About 42.6% mention better job prospects. Other reasons account for 12.0-14.0% of responses (Figure 6.3 and Table 175 in Annex).

**Figure 6.3. What is the main reason you would go or would like to go abroad?**

Students take advantage of work abroad programmes during summer vacations. Some young people interviewed mention doing so simply to make money for their daily needs.

*Almost all students try to go abroad to work during summer vacations. Some go to the USA [United States of America]. Others go to Greece. If I depend on my parents' money, I will not be able to provide for myself everything I need and want. (Female, 22, 4 FG: Ethnic minority young people, Russian speakers)*

Certain preferred destinations emerge, which are correlated with official statistical data. Russia is the lead choice with 15.4%. A little over 10.0% would choose Germany and Italy. About 6.0-7.0% would choose the United States (US), Great Britain or France. Other countries account for less than 4.0% of responses (Figure 6.4 and Table 176 in Annex)

**Figure 6.4. What country would you choose if you went abroad?**

Young people interviewed in group discussions believe going abroad to work gives them a chance for a better life. At the same time, they maintain that if they had a decent<sup>ii</sup> salary, they would prefer to stay in the country. Several young people maintain migration is not a solution for the Republic of Moldova. People should try to change things at home, save what they have and get involved in improving the situation.

*I don't want to leave the country. I just want to travel. Even though there are no big perspectives in Moldova, young people have to change the future of the country. All want Moldova to be changed, but all leave. Things get destroyed. I saw in the news that in Valea Morilor Park, some benches were destroyed. All want to become a part of Europe, but it is hard to achieve. (Female, 18, enrolled in an educational institution, 2 FG: Young women from rural areas)*

Some young people hesitate to go abroad in hopes that things will change for the better in Moldova (employment, salaries, living standards, corruption), and that they can stay to live and work in the country. If they do not see such changes, many plan to migrate.

*I have a plan, and if in Moldova, things change for the better, then I will probably stay here. But if not, then I plan to leave in three years forever. I would like the living standards to be improved, not to have corruption, discrimination, and to have new jobs and another attitude towards young people. (Female, 28, 4 FG: Ethnic minority young people, Russian speakers)*

*If things change, then I will stay. If no, then it is not worth working here. If I leave the country, I will never come back. (Male, 20, 4 FG: Ethnic minority young people, Russian speakers)*

In the near term, some young people plan to continue studies abroad, where their diploma is recognised and they can find a job.

*After I graduate from university, I plan to get Master's degree, but not in Moldova. I'd like to get it in Poland or Germany, if I manage to do it. (Female, 18, 4 FG: Ethnic minority young people, Russian speakers)*

Parents and relatives encourage young people who want to go abroad not to come back. "If you feel good there, don't come back to Moldova. Stay there, because it's very bad here." Some respondents would like their children to grow up in a democratic country where human rights are fully respected.

*If I had children, I wouldn't like them to live in Moldova, because there is no democracy here. If there is democracy, it should be a democratic country. If there is a monarchy, it should be a monarchist country. In Moldova, it is not clear. In three years, I don't know... But not in Moldova" (Male, 22, 4 FG: Ethnic minority young people, Russian speakers)*

## 7. Societal perspectives

The impact of Moldova’s socio-economic situation on young people’s lives is clear in the research. Less than half (46.8%) of interviewees are satisfied with their standard of living, and 25.0% are dissatisfied. The degree of satisfaction decreases significantly with increasing age. About 72.2% of young people aged 14-18 are satisfied, while only 32.7% aged 25-29 say the same. Dependency on parental financial support influences these results; the increasing responsibility of supporting oneself and one’s own family independently under the country’s economic conditions leads to increasing dissatisfaction (Figure 7.1). Thus, satisfaction is highest among young people enrolled in educational institutions (65.9% are very satisfied/satisfied), followed by 56.2% among unmarried young people. The largest proportion of respondents who answer dissatisfied/very dissatisfied are housewives (39.4%) and young people who are married or cohabitate (35.8%) (Table 2 in Annex).

**Figure 7.1. How satisfied are you overall with your standard of living? (By age group)**

Qualitative research makes clear that some young people interviewed in group discussions consider the standard of living in the Republic of Moldova (RM) to be low. Participants point to several factors responsible for these low standards of living: economic stagnation, low salaries, lack of jobs and corruption.

*No one is satisfied with salary because it is miserable compared to minimum consumer basket. It is hard to live on salaries offered by the state. (Male, 19, 4 FG: Ethnic minority young people, Russian speakers)*

*Some people do not live here. They try to survive here. Try to survive. For example, an older person or a person aged 40 to 45 get a salary of 2 500 or 3 000 lei. I don't even talk about young people's situation. (Female, 28, 4 FG: Ethnic minority young people, Russian speakers)*

*There is no economy in the country because of corruption, mafia. They are chained to each other. If there is no economy in the country, there are no reforms. If the power cannot conduct reforms, then the country does not have a future. But country mean young people, good salaries. (Male, 20, 4 FG: Ethnic minority young people, Russian speakers)*

In group discussions, young people highlight that a good start, their standards of living and their achievements depend mostly on the moral and financial support of their parents.

*I do not get any support. I am alone and try to manage myself. It's hard to survive without support. (Female, 26, 3 FG: Young people from vulnerable/poor families)*

*Many parents who have high standards of living push their children and provide them with apartments, cars. But other parents cannot help their children. (Male, 20, 3 FG: Young people from vulnerable/poor families)*

*From my experience, I work much. I have two jobs, but I get enough money. And you can see other people who have everything. They are only 18 to 20 and never worked and are supported by their parents. They are lucky. (Male, 29, 4 FG: Ethnic minority young people, Russian speakers)*

Other young people think parents should not provide financial support to their children but let children themselves find a job or earn money for their necessities. Parents should provide only moral support with guidance and advice.

*It would be better if parents wouldn't support children financially but let them to earn money in order to reach their parents' level of living. They should give them advice. Easy money comes, easy money goes. To have money, one has to earn it. (Female, 21, 3 FG: Young people from vulnerable/poor families)*

## **7.1. Advantages and disadvantages of being young**

Participants in group discussions unanimously identify energy as the key advantage of being young. All focus groups also mention freedom, independence and personal development opportunities. Select discussion groups mention other advantages, such as physical strength, good health, creativity, curiosity and free time (Table 7.1).

Young people believe they have more extended social networks, communicate more intensely with friends and support them more than adults, while others point out that older people have relationships established for many years. Regarding job opportunities, some respondents think employers are more willing to hire young people, while others consider lack of experience a disadvantage to young job seekers.

Participants of many group discussions highlight inexperience, in all aspects of life, as a disadvantage of being young. Another disadvantage is difficulty finding a job, particularly one in their speciality. Financial challenges can be acute for young people and deepen with the increasing necessities associated with life stages (continuing studies, having a family, etc.). Respondents view lack of support for young people by state institutions as a big problem, not only for them but for society as a whole. Young people from vulnerable/poor families and those

with disabilities emphasise the importance of family support. Lack of such support not only exposes them to the daily difficulties young people face but the greater difficulty they have in overcoming them to improve their socio-economic situation in the future. Other noted disadvantages include being treated with distrust, being discouraged, the risks of illegal employment, the ease with which young people may be manipulated or influenced, being indecisive, being underrated or overrated, and being selfish.

**Table 7.1. Advantages and disadvantages of being young in Moldova (by FG)**

| Advantages  | Disadvantages  |
|---|--|
| <ul style="list-style-type: none"> <li>- energetic (all FGs*)</li> <li>- employment and education opportunities (all FGs)</li> <li>- creative (2 FG)</li> <li>- jobs (2 FG)</li> <li>- independence (2 FG)</li> <li>- physical strength (2 FG)</li> </ul> | <ul style="list-style-type: none"> <li>- inexperience (3 FG)</li> <li>- financial difficulties; low salaries (3 FG)</li> <li>- insufficient jobs, particularly corresponding to speciality (2 FG)</li> <li>- lack of support (2 FG)</li> </ul> |

\* 1 FG: Young people with disabilities (aged 16-29); 2 FG: Young women from rural areas (aged 14-9); 3 FG: Young people from vulnerable/poor families (aged 18-29); 4 FG: Ethnic minority young people, Russian speakers (aged 16-29); 5 FG: Roma young people (aged 14-19).

*Note:* Listed advantages and disadvantages were mentioned in two or more discussion groups.

Young people interviewed in group discussions compared their problems with other categories of young people of the same age. Young people with disabilities emphasise that they face more direct or indirect discrimination when applying for jobs as firms avoid hiring people with disabilities.

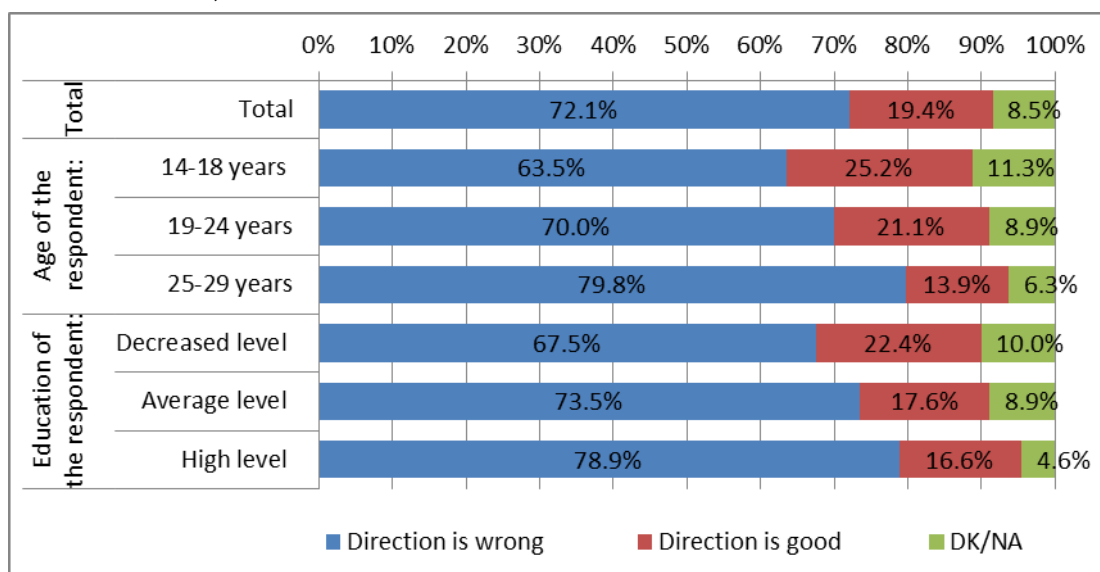

*A story from my own experience. I want to work, but I am always refused. Employers do not hire me. When I apply for a job, I am always told, "You have disabilities. We cannot hire you."* (Female, 21, 1 FG: Young people with disabilities)

*I was not told, but I understood. It is not necessary to be told directly, if I had an appointment for an interview, and in five minutes after I came to interview, I am told that there is no vacancy. They said that would provide me with a workplace. I went to a customer consultant and was told, "No. You should go to be a technician if you want. Your external appearance is important if you want to work as a customer consultant and is not important if you work as a technician."* (Male, 29, ethnic Roma, 1 FG: Young people with disabilities)

## 7.2. Development of the country

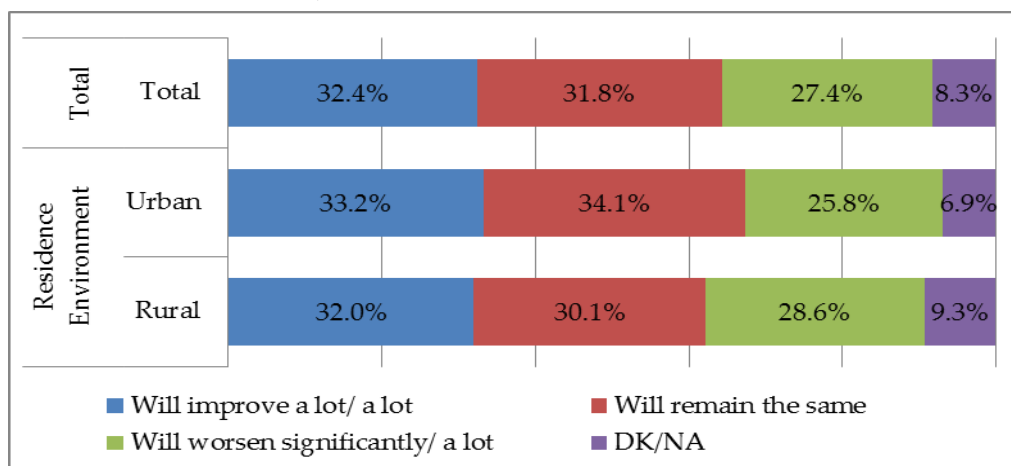

The majority of youth (75.1%) believe Moldova is developing in a bad direction. Only 19.4% answer the opposite. Those aged 25-29 are more pessimistic than younger respondents. The same applies to young people with a high education level compared to those with a low education level (Figure 7.2 and Table 3 in Annex).

**Figure 7.2. Are things in the RM going in a bad or good direction? (By age group and education level)**

Young people differ in their economic outlook for Moldovans in the next ten years. Those who believe the situation will improve exceed those who think it will worsen: 32.4% vs. 27.4%. Urban youth are more optimistic than rural youth (Figure 7.3 and Table 4 in Annex).

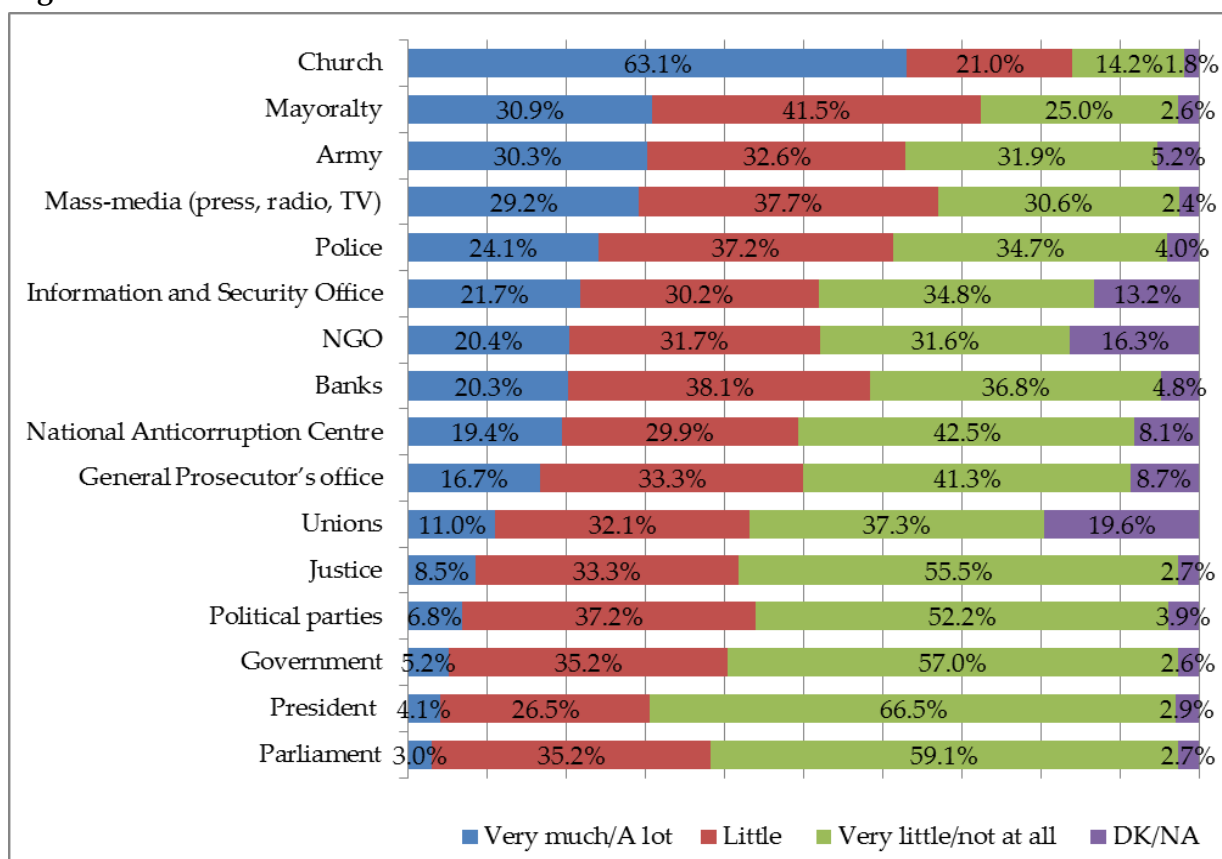

**Figure 7.3. How will the economic situation change for Moldovans in the next ten years? (By residence environment)**

### 7.3. Confidence in national institutions and problems in society

Moldova's political and socio-economic challenges have diminished public confidence in state institutions. The Parliament, the President, the Government, political parties, Justice all rate less than 10.0% in positive opinion (much/some confidence) among young respondents. Over 50.0% select very little/no confidence, while over 30.0% select little confidence (Figure 7.4). By contrast, their level of confidence in the Church is high, with 63.1% expressing much/some confidence. A much lower rate of 30.0% are confident in city hall, the army and mass media. Finally, about 25.0% feel confident in the police (Figure 7.4 and Tables 5-12 in Annex).

**Figure 7.4. How much confidence do you have in the following Moldavan institutions and organisations?**

Respondents also discussed persistent societal problems in discussion groups. Young people interviewed consider corruption a very serious problem at a rate of 70.5%; combined, 95.9% of respondents consider it very serious or serious. Among problems young people consider very serious, migration abroad is second, with 59.2% of responses, followed by energy prices, unemployment, lack of affordable housing and poverty. Young people view terrorism, the spread of HIV/AIDS and climate change as less problematic (Figure 7.5 and Tables 15-20 in Annex).

**Figure 7.5. How serious are the following problems in Moldovan society?**

The largest proportions strongly concerned about corruption are housewives, married young people and those with a high education level (Table 18 in Annex). A large proportion (92.0%) of those who consider laws not being applied very serious/serious are housewives and those with a high education level. Married people, those aged 25-29 and those with a high education level are concerned in greater numbers by crime, with 82.0% of responses. Young people aged 14-18, including those with a low education level and low socio-economic status, are the segments most concerned about terrorism (47.0%) (Table 14 in Annex).

About 97.0% of respondents with low socio-economic status and unemployed perceive poverty as a serious/very serious problem, as do about 95.0% of housewives and young people aged 25-29. About 96.0% of rural youth consider unemployment a very serious/serious problem, along with respondents with a low education level, low socio-economic status, housewives and men. (Table 13 in Annex). About 85.0% of men aged 25-29 from rural areas are concerned about large inequalities between people (Table 20 in Annex).

Migration is a consideration especially for housewives (96.0%) and young people with a high education level (Table 17 in Annex). An equal proportion (92.0%) of housewives, rural youth and unemployed youth consider lack of workplace safety a big problem (Table 16 in Annex). Workplace accidents and poor working conditions are of great concern to 80.0% of young people with a low education level and those with a low socio-economic status.

About 75.0% of respondents aged 25-29, those with a high education level and young married respondents consider very serious/serious the state of the health care system (Table 15 in Annex). About 67.0% of respondents consider very serious/serious the spread of HIV/AIDS, notably women and young people with an average socio-economic status.

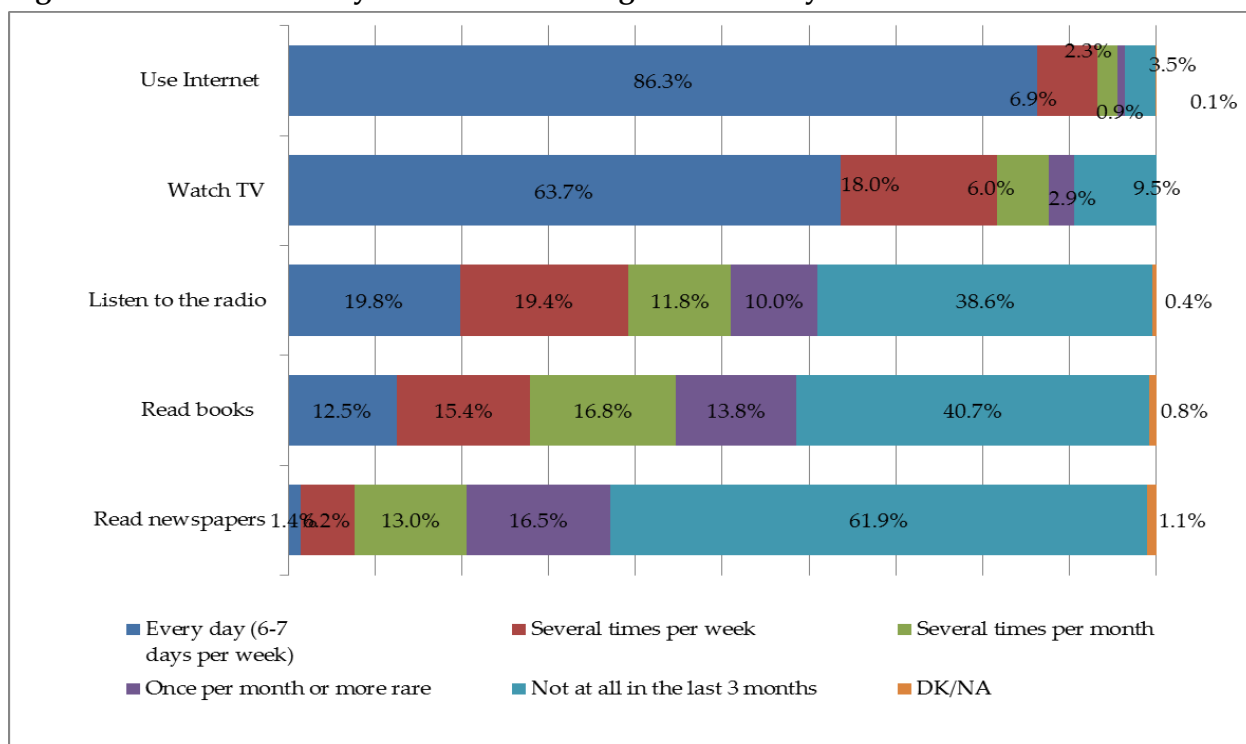

All groups consider lack of affordable housing a big problem: the largest proportion selecting very serious/serious (about 95.0%) are married young people, those aged 25-29, those with a high education level and the employed. The same segments of young people are concerned about energy prices in the same proportion (Table 19 in Annex).

Young people with average socio-economic status and rural youth are most attuned to problems of climate change and schimbările climatice (environmental pollution), accounting for about 70.0% of responses and rating them very serious/serious.

## 8. Leisure

Overwhelmingly, young people spend their free time on the Internet – about 86.3% on a daily basis and 6.9% a few times per week. Other pastimes are less popular; even daily TV figures at 63.7%. Newspapers and books are very unpopular with young people. The majority state that they have not read any books or newspapers in the last three months (Figure 8.1 and Tables 21-25 in Annex).

**Figure 8.1. How often do you do the following activities in your free time?**

In group discussions, young people confirm a preference for spending free time on the Internet, usually searching for information or communicating with friends.

*I try to find more information if I have free time. I use mostly informational websites. I want to stay up to date. (Male, 25, 1 FG: Young people with disabilities)*

*There are no alternatives to rest the way I want. That's why I surf the Internet." (Male, 19, 4 FG: Ethnic minority young people, Russian speakers)*

*I have a hobby. I like to be on the Internet. (Female, 18, 5 FG: Roma young people)*

Many young people choose to spend free time with friends, usually going for a walk.

*I walk, communicate with my circle of friends when I have free time. Free time is a time for resting, when you can stay away from other things. (Male, 19, 4 FG: Ethnic minority young people, Russian speakers)*

*I go for a walk with friends. (Female, 16, 2 FG: Young women from rural areas)*

*At 5 to 6 o'clock, I go to the park with girls and boys. We drink something, take pictures, discuss. I stay with a boy. (Female, 18, 5 FG: Roma young people)*

Young men, including some with disabilities, usually play sports in their free time. Most sports involve fees. Where this is a financial obstacle, young people play sports at home or on local sports grounds. In some localities, sports teams are free, but young people hesitate to join if they do not belong or want to belong to a particular community.

*Sport. I am in wheelchair, and I want to stand up, and I can do it only with help of sport. (Male, 26, 1 FG: Young people with disabilities)*

*When we have free time, we play volleyball or football, or we have picnics. (Female, 19, 1 FG: Young people with disabilities)*

*I do sport at the stadium where I can play football, basketball. Most people do sport at home. That's true. (Male, 22, 1 FG: Young people with disabilities)*

*Most gyms are paid. There are places where it is for free, but among the visitors are only Jehovah's Witnesses, believers that set certain conditions just to say, "Look, we believe in God" or "We think about God in a little different way." They recruit through various means. I know about it. There is such a gym in my locality. That's the situation. There come Jehovah's Witnesses, Baptists. I don't like when someone says, "Your belief is a little bit wrong. Our belief is right. (Male, 22, 1 FG: Young people with disabilities)*

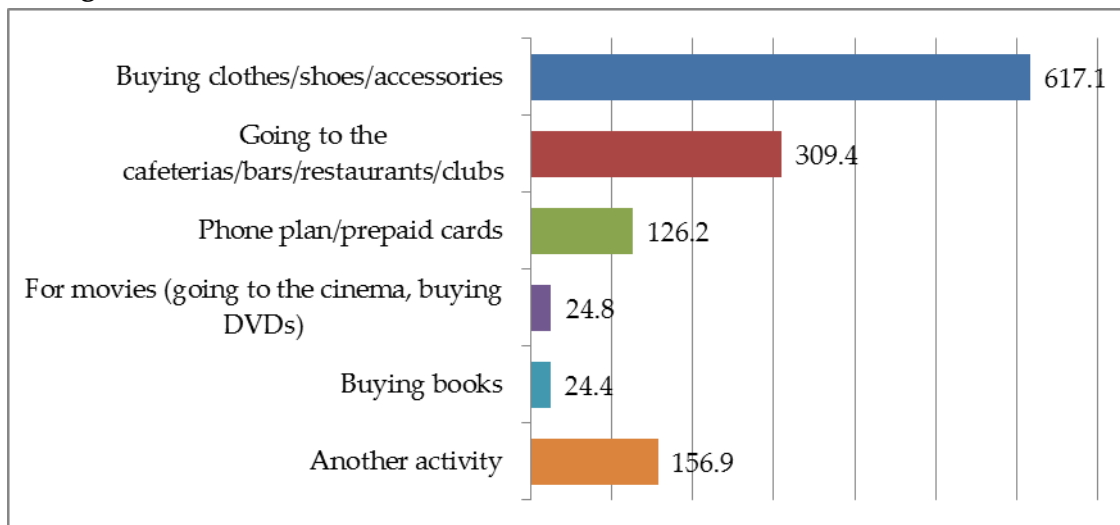

For other young people, free time is associated with rest and sleep.

*When I have free time, I sleep, because I get very tired at work. I try not to sleep and make myself to go out, but good sleep is very important. (Female, 21, 4 FG: Ethnic minority young people, Russian speakers)*

On line, young people use the following social networks most frequently: Odnoklassniki (83.5%), Facebook (60.7%), VKontakte (30.2%), Instagram (17.4%), Twitter (9.7%) and LinkedIN (1.3%) (Tables 26 and 27 in Annex).

Young people are also consumers in their free time. Per month, they spend on average MDL 617 on apparel (clothes, shoes, accessories); half of respondents spend MDL 500 or more for that purpose. They spend about MDL 300 on dining/nightlife (cafes, restaurants, bars, and clubs); half spend over MDL 100 on average for that purpose. In addition, they spend on average MDL 120 on phone bills. The least amounts are spent on movies and books; half of respondents budget nothing for those purposes (Figure 8.2 and Tables 28-30 in Annex).

**Figure 8.2. How much do you spend on the following consumer goods per month on average?**

## 9. Information sources

As with free time, the majority of young people use the Internet as their primary source of information. Some use the Internet to find jobs or projects they can be involved in, including income-generating activity on line. Young people also use Internet information for self-education and exam preparation.

*I look for different projects on the Internet where I can be involved, find news. (Female, 16, 2 FG: Young women from rural areas)*

*I tried to start a business with clothes, for example, create a website for socialising, add more people and leave comments about clothes. But it is expensive. For example, one can make an order but not pay, and you have to pay your own money, and you cannot make enough money. It's expensive. It's better to find a workplace and to work for yourself." (Female, 21, 1 FG: Young people with disabilities)*

*At the moment, I prepare for exams, and I am constantly busy with things related to legislation. Translations: if you do not understand some words, you have to translate them – mainly legal terms. (Male, 22, 1 FG: Young people with disabilities)*

*I study on line: information, make researches. And, of course, I socialise on the Internet. I try to learn many available things. I know English, and it is easy for me to look through information related to these domains. (Male, 29, 1 FG: Young people with disabilities)*

Socialising sites are those most visited by youth, used for both communication and information. Some young people prefer communicating with friends and others on social networks instead of face-to-face. In particular, some shy people and young people with disabilities are more comfortable communicating by message than directly.

*I like to write better, because I am a shy person. (Female, 19, 2 FG: Young women from rural areas)*

*Then when you communicate, you cannot tell a lot of things. But when you write, and the person is not in front of you, it is easier. (Female, 18, 2 FG: Young women from rural areas)*

*I feel good – better – at home. Or I read a book or I talk to someone on line. I ask other people. Even if there are people that want to see you, to know you, but the majority are looking at you in an unpleasant way. I think that is something normal. (Female, 21, 1 FG: Young people with disabilities)*

Social networks facilitate communication with friends or relatives abroad. Some young people state it allows them to follow what is happening in the lives of loved ones working abroad and with whom they rarely meet.

*[Social networks] help me to find friends who are not near me – many friends that are abroad – to communicate with someone new, to make new friends." (Male, 29, 1 FG: Young people with disabilities)*

*Internet is helping me to communicate with people that I have not seen for a long time – they are grown-ups already – and have the opportunity to communicate with them. (Female, 18, 5 RG: Roma young people)*

*I am trying to communicate with people that I have not seen for a long time. (Female, 18, 5 FG: Roma young people)*

Along with jobs, education and socialising, young people get their current affairs news on line. They are mostly interested in political news and popular culture, in the country and abroad. For some young people, social networks are also their news source of information. Still, information published on social media is not always trustworthy: accurate, balanced, in-depth and authoritative. Young people tend to validate social media news on other sites. What social networks do provide, and what is important to young people to know, are the opinions and reactions of others to news stories. Usually, they read comments by other users that then help form their own opinion of events.

*On social networks, you can find much more truthful information than on TV channels. I find out from social networks what is happening, and then I am searching on Google if it is true and see different opinions for this particular question. (Female, 18, 4 FG: Ethnic minority young people, Russian speakers)*

*On these socialising sites are posted different types of information that are actual or what is happening in the country. We find that information anyway. (Female, 17, 2 FG: Young women from rural areas)*

*[Referring to social networks.] A more trustworthy pieces of information. You can see the comments there – see how people react.” (Male, 20, 4 FG: Ethnic minority young people, Russian speakers)*

If not to socialise or to find news, many young people use some social sites strictly for fun: to listen to music, watch movies, etc.

*I usually listen to music on Odnoklassniki social network because I do not have this possibility on Facebook. (Female, 19, 2 FG: Young women from rural areas)*

TV remains a source of news and other information for young people, despite being thought more or less untrustworthy. The majority of young people consider information on Moldovan channels untruthful. They think the reportage is not objective but influenced by and promoting the interests of owners.

*What is the point to watch news if all the TV channels are showing the info that is convenient for the state? (Female, 22, 4 FG: Ethnic minority young people, Russian speakers)*

*Only Internet. Television – you cannot see anything there. The same things are shown every day. You are being brainwashed. (Male, 19, 4 FG: Ethnic minority young people, Russian speakers)*

*It all depends who is financing this TV channel. I think that if an individual is interested in something, he will find a possibility to see the news and to make his own conclusion. If the person is intelligent, he will find a solution from the situation and will make his own conclusions. (Male, 29, 4 FG: Ethnic minority young people, Russian speakers)*

*You watch Moldova 1, and they are showing that RM is like in heaven. You watch Journal TV, and you see that everything is bad in Moldova. You watch Pro TV, and you see how gypsies are fighting all the time. What can you watch? (Male, 28, 4 FG: Ethnic minority young people, Russian speakers)*

Some young Moldovans are angry that TV channels do not approach, or completely neglect, problems confronting young people in Moldovan society. Instead, reportage focuses on other societal problems, such as corruption.

*If we are to watch a TV channel for about one hour, they won't tell anything about young people – that*

*something is decided for the youth. They will show news about unauthorised constructions, the mayor stole, and someone else stole, but nothing about young people. (Male, 29, 4 FG: Ethnic minority young people, Russian speakers)*

## 10. Social environment

### 10.1. Family life

Most young people live with family: 44.7% with both parents; 29.1% with their spouse or partner; 9.1% with their mother; and 2.3% with their father. Only 6.9% of young people live alone, which occurs more often in urban than rural areas (9.6% vs. 5.0%) (Table 31 in Annex).

A good percentage (42.5%) of young people lives with their parents because it is the best option for the family. If finances allowed, 20.8% of respondents would be out on their own. Some 14.2% of respondents do live apart from their parents, while 3.7% would live apart but their parents object. The number of rural youth living with their parents is higher: 50.7% vs. 31.5% of urban youth (Table 32 in Annex).

The majority (66.0%) of young people say they get along very well with their parents; 27.3% say pretty well, although opinions sometimes differ; and 4.0% say not so well or have conflicts with their parents (Table 33 in Annex). Overall, young people are very trusting of their families. On a scale of 1 (no trust) to 10 (complete trust), about 74.0% of respondents give 10, and less than 5.0% give 6 or less (Table 49 in Annex).

For about 40.9% of respondents, mothers have the biggest influence on their major life decisions (education, moving, marrying, etc.). Fathers are the main influence for 21.1% of respondents, and 29.0% say no one influences their decisions (Figure 10.1).

**Figure 10.1. Which family member has the biggest influence on your major life decisions (e.g. education, moving, marrying)?**

A higher number of young woman select mother than men (48.4% vs. 32.5%). The same is true of rural compared to urban youth (42.9% vs. 38.2%). Conversely, fathers more frequently influence young men than they do for women (27.0% vs. 15.3%). More young men than women

state not being influenced by anybody (33.3% vs. 25.1%). This is likewise the case for urban over rural youth (30.7% vs. 27.7%) (Table 34 in Annex).

More than half (59.3%) of young people make major life decisions together with their parents, although with slightly greater frequency for women than men (59.3% vs. 47.9%) and for rural than urban youth (57.3% vs. 49.3%) (Figure 10.2). The greatest number of respondents making decisions with their parents are youths aged 14-18 years (81.0%), followed by 75.3% of young people enrolled in educational institutions. Among those who make decisions with no one's influence, 62.4% have a high education level, and 61.2% are aged 25-29 (Table 35 in Annex).

**Figure 10.2. How involved are your parents in your major life decisions? (By gender and residence environment)**

Of all participants, 44.2% are already married or in a domestic partnership. A further 41.8% see themselves married with a family in the future, 4.8% unmarried but with a partner, and 4.5% unmarried without a partner. Domestic partnerships are a more frequent choice among men than women and among those with a low education level compared to a high one (Table 36 in Annex).

According to respondents, the most suitable ages for marriage are 22.8 for women and 25.9 for men. The same ages are indicated for having children. Urban youth give ages one year older than rural youth (Tables 37 and 38 in Annex). Over half of respondents would like to have two or more children (average 2.3) (Table 39 in Annex).

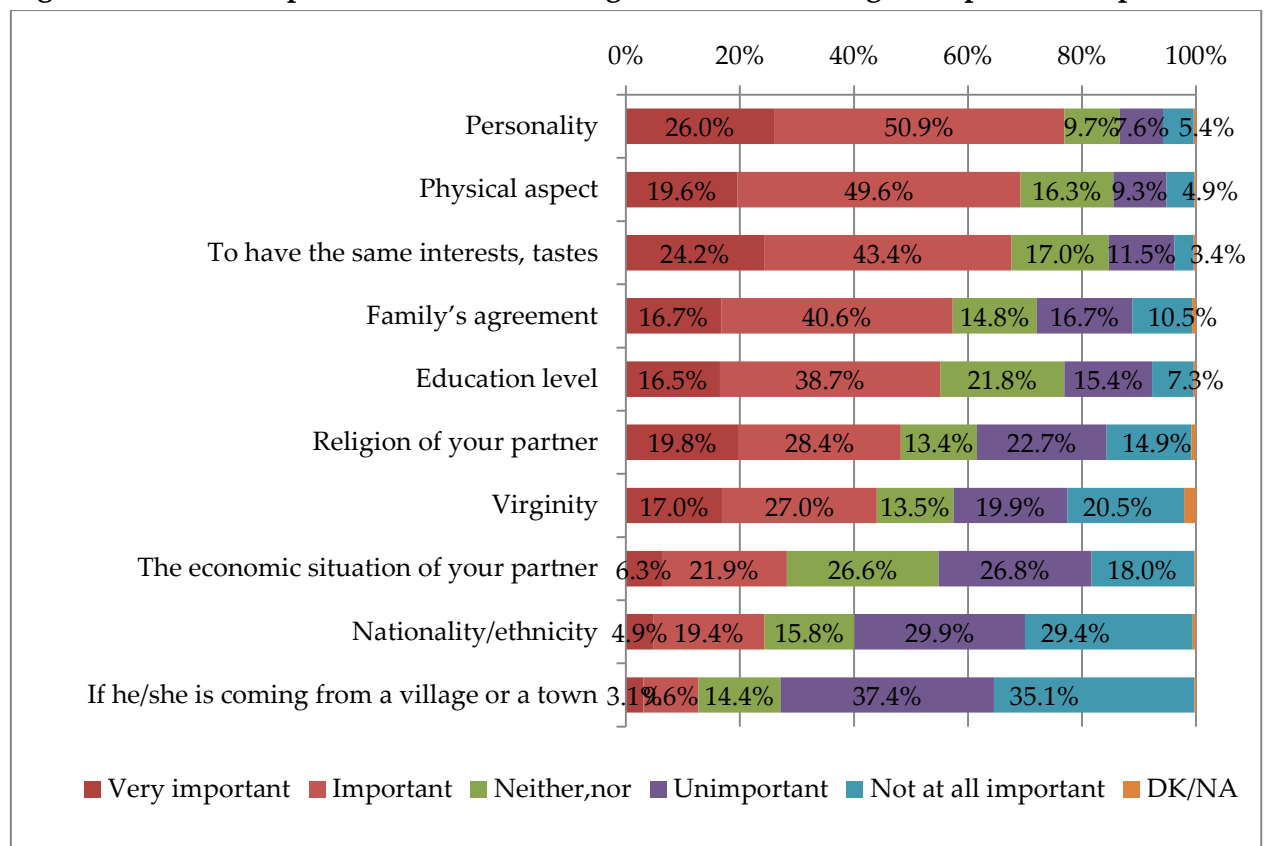

From group discussions, young Roma people usually get married at 15-18 years old, as per their traditions, which they strictly respect. Notwithstanding, many Roma youth feel the perfect marriage age is 18-24, when young people are more prepared to begin a family. Most young Roma want to have two children, but do not exclude the possibility of having more.

Moldovans think it is normal to get married at 25-30 years old, and for us it is normal at 15-16 years old. (Male, 14, 5 FG: Roma young people)

All my ancestors married at a younger age. This is a tradition. My father married at 18 years old, my grandpa at 19 years old, my uncle at 16 years old. I will get married at 18 years old, just like my father. (Male, 16, 5 FG: Roma young people)

Young Moldovans express certain priorities in choice of partner. For about 76.9%, personality is very important/important; physical attraction and common tastes/interests are for about 70.0%; and level of education and family approval are for over 55.0%. Less important are nationality/ethnicity (24.3%) and residence environment (only 12.7%, although with an observable difference between men and women) (Figure 10.3 and Tables 40-44 in Annex).

**Figure 10.3. How important are the following factors in choosing a life partner or spouse?**

The majority of young Roma prefer marriage to someone Roma. Their reasons are shared traditions and language, and a lack of acceptance in the Roma community of mixed marriage. Several would prefer to marry someone of another ethnicity. Young women express more tolerance for mixed marriage than men. They stress the importance of an affectionate relationship over community opinion.

I would not marry a Moldovan because I speak a language, he speaks another one. We have different traditions. He will wear an apron, and I don't like that. (Female, 18, 5 FG: Roma young people)

I wouldn't like to marry a Moldovan because they are different from us. If I would marry a Moldovan, my nation, Roma, will laugh at me. They will talk behind my back. (Female, 12, 5 FG: Roma young people)

people)

*I do not care with whole I will marry: Bulgarian, Kazak or Eskimo. For me, it is important to love me, not only for the body pleasures, but to be my other half and to create a family. (Female, 18, 5 FG: Roma young people)*

## 10.2. Friends and interpersonal values

Over 70.0% of respondents have a group of friends who know one another and spend a lot of time together. This is more frequently the case for young men than women (76.1% vs. 65.2%) and for urban youth than rural (72.6% vs. 68.6%). This response diminishes with age (from 79.8% among 14-18 year-olds to 66.6% among 25-29 year-olds) and increases with education level (from 68.6% among those with a low level to 72.0% among those with higher) (Table 45 in Annex).

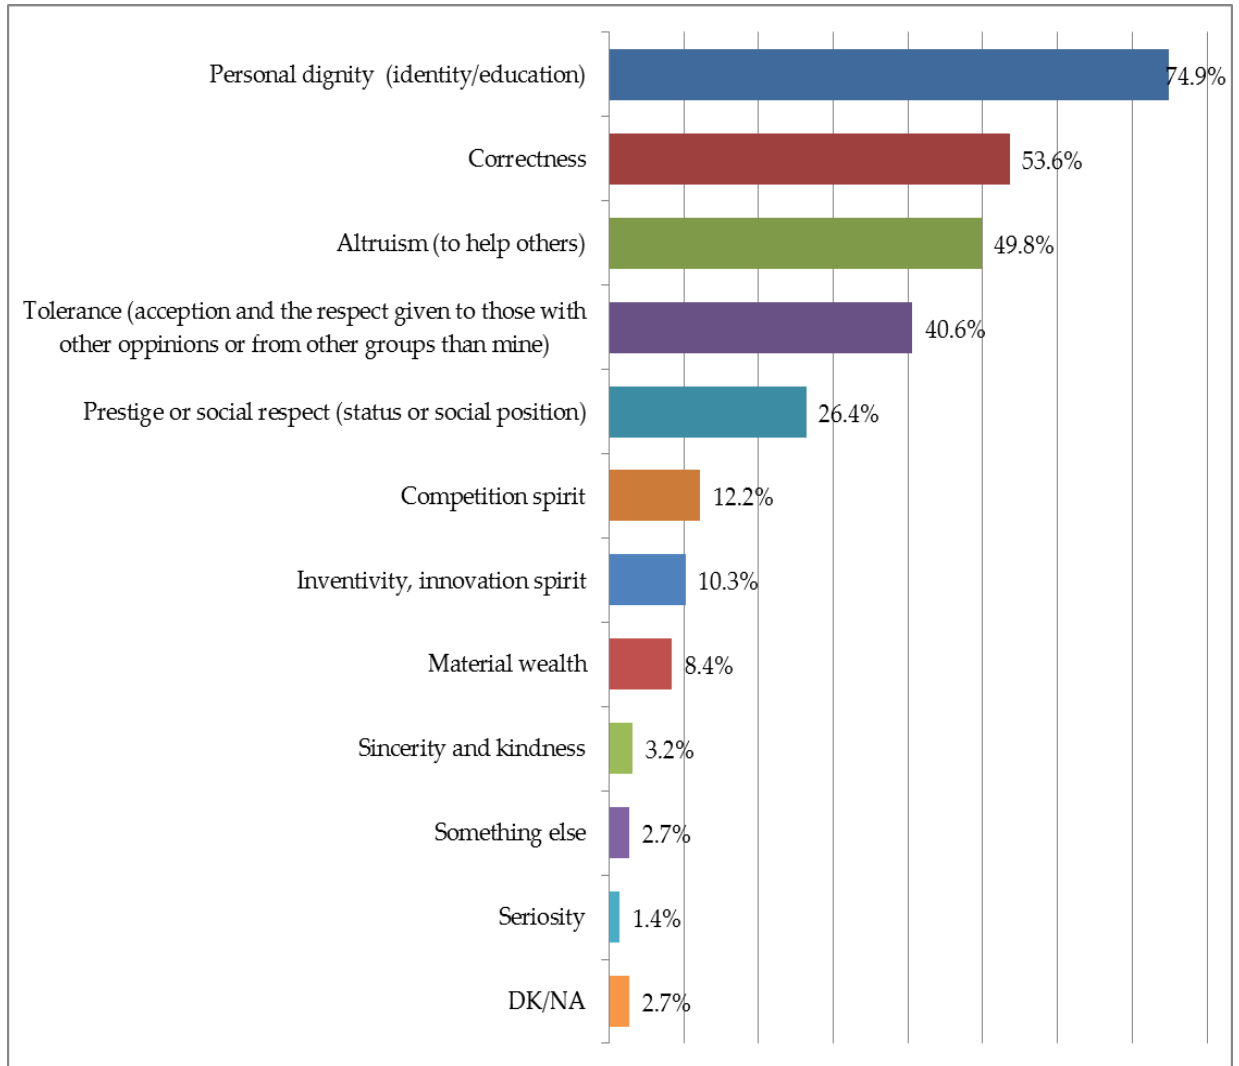

Satisfaction with their circles of friends is quite high, with 86.5% of respondents selecting very satisfied/satisfied. Respondents with a high education level give this answer more frequently than those with a low education level (92.0% vs. 83.8%); rural youth give it more often than urban youth (87.9% vs. 84.9%) (Figure 10.4 and Table 46 in Annex).

**Figure 10.4. How satisfied are you of the friends you have? (By education level and residence environment)**

Young participants appreciate certain values in others: personal dignity (74.9%), correctness (53.6%), selflessness (49.8%) and tolerance (40.6%). Of lesser value are seriousness and well-being, mentioned by only a few participants (Figure 10.5 and Table 48 in Annex).

**Figure 10.5. Which of the following values do you appreciate in others?**

### 10.3. Discrimination

Young participants acknowledge that discrimination persists to a certain extent in Moldova, especially with respect to wealth and gender. However, the majority of respondents (90.0%) declare rarely or never experiencing any kind of discrimination themselves (Figure 10.6 and Tables 57-60 in Annex).

**Figure 10.6. How often do you feel discriminated against on the following grounds?**

Some young people report feeling discriminated against by educational staff on ethnic grounds and their inability to speak the official language.

*The lady was the head of our group and a professor of Computer Science. She was coming to the class, and each time she was putting pressures on you. She was saying that I will not be able to pass my oral exam. And when you were coming to the exam, you deserved a grade, but she was giving you a lower grade. She was doing the best she could so I would leave. I had to study another four years and to listen to her all these four years, because she had a high position... And I was not the only one affected. There were two Russian or Bulgarian boys, and she was discriminating against them as well. This all happened because we were of another nationality. (Male, 29, 4 FG: Ethnic minority young people, Russian speakers)*

As seen, young people with disabilities feel they face discrimination from employers. Even when they seek help finding vacancies for which they qualify from the National Agency for Employment (NAE), the majority are refused by the interviewing companies. Many lose trust, and most give up searching.

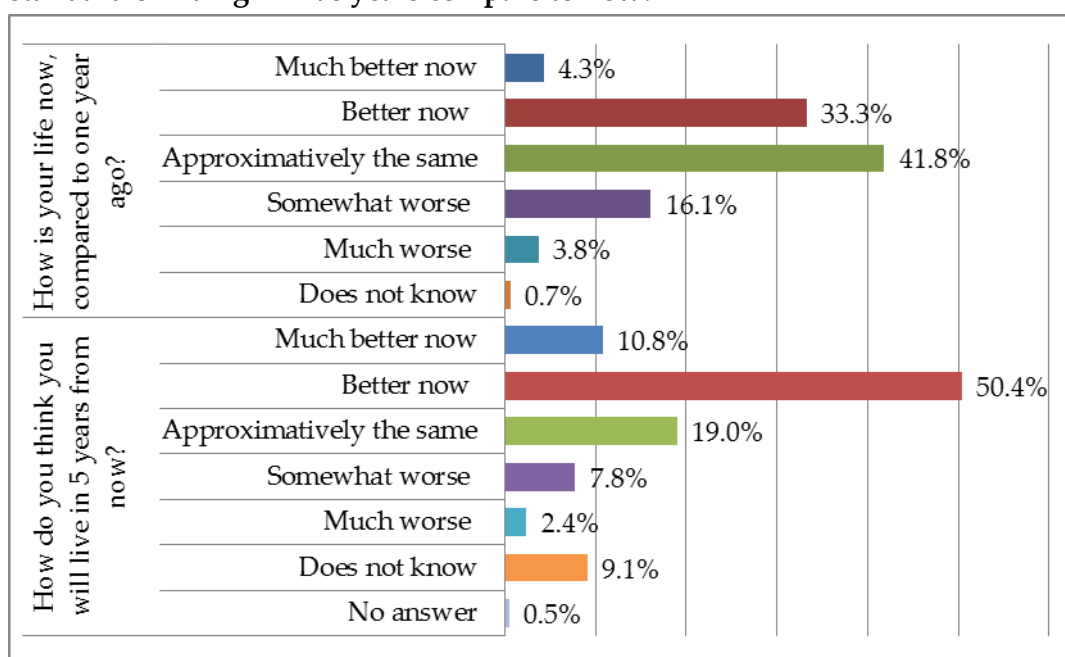

*The chief of NAE Sîngerei told me that almost all the economic agents – they do not know about my disability, but they do not want to hire me. They did not see you, maybe you are capable to do certain things, but they don't want to hire you. We have a lot of difficulties with that. According to the law, they are obliged to hire at least a person with disabilities in their business, but they do not want that. (Male, 25, 1 FG: Young people with disabilities)*

*They told me at NAE, "How come you want to work? Why do you need this? You will not be able to work." I had the third group of disability and I had 80 lei per month as an income. How can I live with 80 lei? After we became an associated country to the EU [European Union], I was given second group of disability, and I have 180 lei and compensation of 100 lei. (Male, 26, 1 FG: Young people with disabilities)*

## 10.4. Standard of living

Young people generally regard the trajectory of living standards in Moldova as positive. About 37.6% of respondents think life is much better now compared to one year ago. Another 41.8% find it about the same, and just 20.0% consider it worse/much worse. Young people are also optimistic in their outlook on the future. Over 60.0% think they will live better in five years, while 19.0% believe they will live the same, and 10.0% believe their lives will be worse (Figure 10.7). Optimistic in higher numbers are youth aged 14-18 and those enrolled in educational institutions (Tables 61 and 62 in Annex).

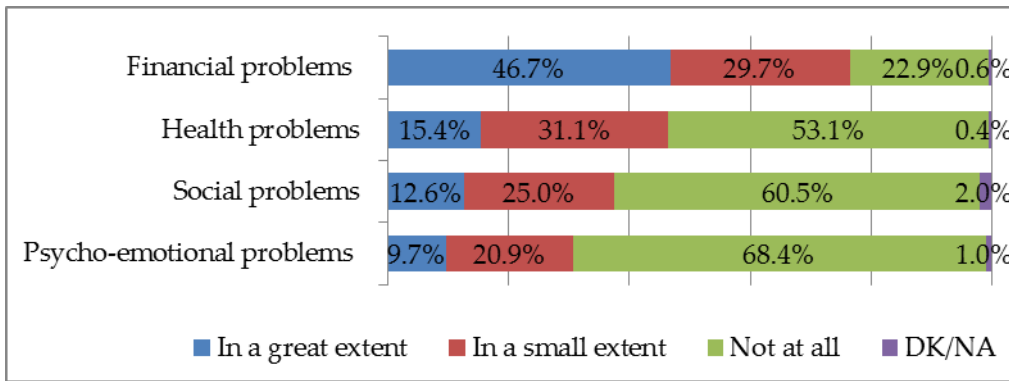

**Figure 10.7. How does your standard of living now compare to one year ago? How will your standard of living in five years compare to now?**

## 10.5. Social support

Participants provided feedback on the issues they need more support to manage. In terms of finances, 46.7% report needing assistance to a great extent, 29.7% to a small extent, and only 22.9% not at all. In terms of health, 46.5% report needing help: 15.4% to a great extent and 31.1% to a small extent. Regarding social problems, 37.6% report needing assistance: 12.6% to a great extent and 25.0% to a small extent. Assistance with psycho-emotional problems is a concern for 30.6%: 9.7% to a great extent and 20.9% to a small extent (Figure 10.8). Young women and rural youth report need of assistance most frequently in more areas of their lives (Tables 63 and 64 in Annex).

**Figure 10.8. To what extent do you need additional help to overcome the following challenges?**

Asked to express the source of the needed assistance, 80.2% of respondents choose family. Friends, doctors and relatives each figure at 20.0% of responses, while 7.2% of respondents select social workers. Other options accumulate unitary answers, demonstrating that these institutions are not so popular among young people (Figure 10.9 and Tables 65 and 66 in Annex).

**Figure 10.9. Who do you think could offer you this help?**

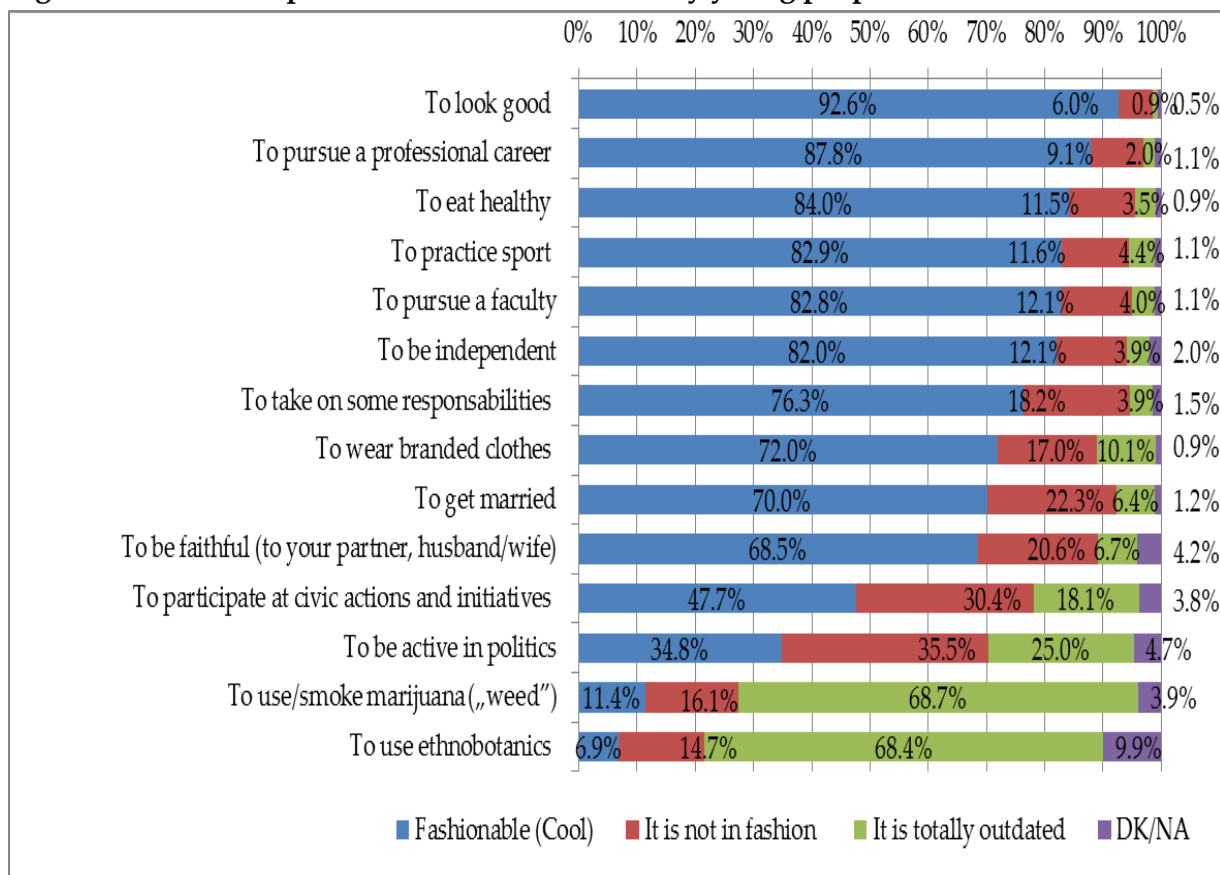

## 10.6. Trends and core values

Young people are often creators, arbiters, antenna and those most affected by the trends (in style, language, tools, interests, social perspectives) that have global impacts in today's connected world. Asked which in a list of pursuits are considered cool in youth culture, looking good was selected with highest frequency (92.6%). Pursuing a professional career is selected by 87.8%, and eating healthy, practicing sports, pursuing a degree and being independent are each selected by over 82.0%. What youth consider unfashionable is as significant. Over 68.0% of respondents say using ethnobotanics and marijuana. Civic participation responses are mixed, with 34.0% answering favourably and 25.0% reporting it is outdated. Participating in civic

actions and initiatives has 47.7% affirmative responses, while 18.1% consider it outdated (Figure 10.10 and Tables 67-71 in Annex).

**Figure 10.10. Which pursuits are considered cool by young people?**

Respondents also provided views on things of more essential importance to young people. Topmost among these are issues related to family. Over 93.0% rank both acquiring a home and having children as very important/important. Getting married and having a professional career/better job are very important/important for 88.0% of respondents. Pursuing a degree or going to community college or vocation school is very important/important to 78.5% of respondents, as is going abroad to work for almost half of them (Figure 10.11). Urban youth value pursuing education, having a professional career and acquiring a home in greater numbers than rural youth. Rural youth value forming a family (getting married) and going abroad to work in greater numbers than urban youth (Tables 72-75 in Annex).

**Figure 10.11. How important are the following life pursuits for you?**

## 11. Conclusions

This survey research into the opinions of young people in Moldova confirms their continued status as among the country's least empowered and most vulnerable populations in terms of job prospects, financial viability and recognition and supports by institutions. This appears especially true of youth in rural areas. As such, young people are a large contingent among Moldovans ready and willing to migrate to improve their standard of living.

Although the Government intensified the promotion of youth policies in recent years, this study finds that the indifference of public authorities towards youth advocacy actions persists and continues to punish those with initiative at the school level. Moreover, young people with low socio-economic status do not have access to the youth centres, and youth centre services are mainly offered during prevention campaigns (suicide, alcohol abuse, HIV/AIDS, etc.).

More than half of the youth interviewed are dissatisfied with democracy in Moldova, rural youth and those less educated being most dissatisfied and disengaged. Only 25.0% believe voting influences the way the central public authorities function. By and large, young people believe Moldova is developing in a bad direction – 70.0% of youth, no matter the age or education level. As many young people think that the (poor) economic situation for citizens will continue in the next ten years as there are young people who think it will improve. More than half of respondents are chiefly concerned with economic issues (low wages, poverty, lack of jobs), along with endemic corruption.

Focus group discussions reveal disappointment with the present government, lack of will to participate in elections and opposition to voting starting at 16 years. That scepticism may arise from the employment situation of young people. Approximately 33.3% of the young people interviewed are unemployed; 30.0% are studying at school or university; 20.0% work in commerce, hotels and restaurants; 16.0% work in services; and 14.0% work in construction.

While a little over half of young people have the same job they have had for more than one year, a majority of interviewed young people have had several jobs in the last years due to low wages, lack of opportunities for professional growth, nepotism and lack of assistance on the job by work personnel. Local companies continue the practice of low wages paid to young specialists and unpaid internships, and volunteer internships organised by universities are mostly formal. Thus, young people who work today for these companies can migrate to another country tomorrow, due to the uncertainty of tomorrow's day and financial difficulties. Migration to other countries at this moment in time does not seem impossible for the young people, due to the fact that over 2/3 of respondents mentioned that their mother, father or siblings already work abroad.

A little over half of the youth wish to find another job, due to the unsatisfying wage – a reason mentioned by three quarters of young people interviewed - and a third are not satisfied with work regime. That is why, about four out of five young people tried to find a new job with the

help of friends, relatives of colleagues, and that over half of the respondents contacted directly the HR team. Internships during studies were offered to one third of the respondents, more women than men (33% compared to 27%). Likewise, the vocational orientation is basically absent. Young people offer as possible solutions for the organisation of information internships and some common activities between entrepreneurs and educational institutions.

The analysis of young people access to studies revealed that a great majority of them are facing difficulties accessing education due to location and financial issues. As the research shows, some young people did not continue their studies in the area they wanted. In addition, young people with disabilities have greater difficulties to continue their studies. The same is true of Russian speakers who do not know the official language – Romanian.

One out of four respondents mentioned that they intend to open a business in the following two years, while more than three out of four stated that they are motivated by the idea to earn more money and half by the idea of financial independence. However, the qualitative research revealed that young people hesitate to apply to programmes that would help them in the initiation of their own business due to multiple administrative procedures that require a lot of efforts and time, the weak purchasing power of poor and simple people and the lack of an innovative and sustainable business idea. In addition, 44% mentioned corruption as a major barrier in starting a business, while 40% cited dissuasive high taxes.

During the group discussions, the great majority of respondents mentioned their low living standards and the fact that their successes rely largely on the help provided by their parents, although some of them strongly believe that parents should not support them financially.

As regards with health services, half of the young interviewees mention lack of money as the main barriers to access health services in case of need, as well as the necessity to receive a doctor's referral from the family doctor. Only half of respondents say they are satisfied with medical services. Results also highlighted the bad attitude of the medical staff towards the patient's problems. That is why young people who live close to the security area prefer to ask for medical health in Transnistria. Young people who take care of infants or babies prefer to avoid the expensive treatments prescribed by doctors, considering them too strong for the children.

The study highlighted the fact that young people were unsatisfied regarding the utility of medical insurance card, especially employed young people and those with disabilities. Young people see the appointment system as inefficient, saying that they generally have to stay in a queue at the public health institutions. Although sexual and reproductive health and healthy lifestyles have been promoted over the last years, about one third of respondents never used any contraceptive methods when they had intercourse. Results also show the failure of the government to enforce the legislation regarding the sale of alcohol and tobacco. Roma youth in particular mention the accessibility alcoholic drinks, drugs or ethno-botanics.

Half of the young people interviewed does not consider the student life easy or stressful. Almost half of young people believe that better grades can be obtained through corrupt practices such as offering presents or money. That is how we can explain the very small amount of time (not more than 3 hours) that young people consider as necessary to prepare your homework, except the morning classes. As regards with their leisure activities, the large majority of Moldovan youth spend their free time on line in order to inform themselves or communicate with friends, while social networking sites are the most visited. Likewise, practicing sports and going out with friends are mentioned by a large proportion of respondents. Young people mostly spend their budget on apparel (clothes/shoes and accessories), followed by dining/nightlife expenses (cafes, restaurants and clubs) and phone bills.

Youth with disabilities and minority youth report feeling discriminated against by educational staff and employers on ethnic grounds, their inability to speak the official language or their disabilities. Interestingly, a large majority of youth interviewed mention that they take into account their parent's opinion to make important decisions. Family remains an important source of support for young people to deal with financial, social, or health issues.
